### The Seed Catalogue.

I love the seedsman's picture book;

It is a treat

With avaricious eyes I look

Upon the beet.

For gardening I have the craze;

I'll send my cash

And buy the seeds from which to raise

Some succotash.

I'd like to plant some pickles, too,

In my back yard.

I think that I could grow a few;

It isn't hard.

I simply yearn to scatter seed;

I'm all agog.

It certainly is fun to read

The catalogue.

—Louisville Courier.

# Bay Trees

Standard Bay.

We have just received four carloads of fine shapely trees in the following sizes:

### Standard or Tree Shaped.

| Stem about | Crown.    | Each.   | Stem about | Crown.    | Each.   |
|------------|-----------|---------|------------|-----------|---------|
| 42 46 in.  | 24 in.... | \$ 6.75 | 45-48 in.  | 30 in.... | \$10.00 |
| 45-48 in.  | 26 in.... | 7.50    | 46-54 in.  | 34 in.... | 12.00   |
| 46-50 in.  | 28 in.... | 8.00    | 46-53 in.  | 40 in.... | 15.00   |

### Dwarf Standards.

| Total Height. | Crown.          | Each.  |
|---------------|-----------------|--------|
| 4 to 5 feet.  | 24 to 26 in.... | \$7.50 |

### Pyramid Shaped.

| Height. | Base.           | Each.   |
|---------|-----------------|---------|
| 5 ft.   | 24 to 26 in.... | \$ 8.00 |
| 6 ft.   | 26 to 28 in.... | 10.00   |
| 6½ ft.  | 28 to 30 in.... | 12.00   |

## BOX TREES

If wanted out of tubs we allow 10 per cent discount.

### Pyramid Shaped.

| 2 Height. | Ea.    | Pair   |
|-----------|--------|--------|
| 3 ft..... | \$1.50 | \$2.75 |
| 4 ft..... | 2.50   | 4.50   |
| 5 ft..... | 4.00   | 7.00   |

### Standard or Tree Shaped.

| Crown.          | Each.  | Pair.   |
|-----------------|--------|---------|
| 22 to 25 in.... | \$4.50 | \$ 8.00 |
| 30 to 32 in.... | 5.50   | 10.00   |
| 32 to 34 in.... | 7.00   | 12.00   |

### Bush Shaped.

These do not come in tubs.

| Height.               | Each.  | Doz.   | 100     |
|-----------------------|--------|--------|---------|
| 10 to 12 in....       | \$0.30 | \$3.00 | \$30.00 |
| 12 to 15 in....       | .35    | 3.50   | 25.00   |
| 15 to 18 in., light.. | .40    | 4.00   | 30.00   |
| 15 to 18 in., heavy.. | .45    | 4.50   | 35.00   |
| 24 to 26 in....       | .75    | 8.00   |         |
| 24 in....             | 1.00   | 10.00  |         |

**C. EISELE,**

11th and Westmoreland Sts. Philadelphia, Pa.

Baltimore.

Trade continues only fairly active, the lateness of the cold snaps took the heart out of garden makers, and until the past few days, bedding stock was slow. Now, under the influence of warmer airs and freshening showers, there is more animation, and the efforts by societies and newspapers towards encouraging home-beautifying is having a widespread and wholesome effect. The May processions of the Sunday schools has created some demands, as usual, for cut flowers, but they are filled by hardy stock which is abundant and extra early. Preparations are being made for a more general celebration than usual of Memorial day, and the soldiers' cemeteries will be the centers of abundant decorations. Every grave of their thousands will have flags and floral embellishments, and this year there will be no distinguishing between the resting places of those who fought in contending armies. The Grand Army and other similar organizations will strew flowers on the graves of those who were either the blue or the gray, recognizing the valor and patriotism of all, who for the cause they believed to be right fought and died. The day has become, only of late years, one for the general decoration of the resting places of the departed, and with many the custom is an annual one of repairing to the church yards and cemeteries and planting blooming shrubs and vines and laying upon the green turf bright flowers, representing at once sorrowful memories and abiding hope. The idea is a beautiful one, and deserves to be extended in its application.

The freeze of May 14 was disastrous over a wide stretch of territory, wrecking many gardens and truck patches which had been planted to the tenderer varieties, and destroying great quantities of fruit, especially along the fruit belt of the western part of the state. The loss was very great though there is no way, of estimating the damage in money.

## I Am Disposing of the Florham Farms Collection of ORCHIDS

and can quote established plants of **Cattleya Trianae**, **Schroederæ**, **Labiata**, in 5 to 8 in. pots, at \$2.00 per plant.

**Cypripedium Leeanaum**, in pans, from 5 to 8 in., 50c to \$3.00 each.

**CHARLES H. TOTTY,** Madison, N. J.

## A FEW GOOD THINGS YOU WANT.

## Orchids..

We have changed our domicile from Secaucus, N. J., to Mamaroneck, N. Y. We are largest collectors and importers of Orchids and are now booking orders for all the commercial Cattleyas for delivery next spring.

**GARRILLO & BALDWIN,** Mamaroneck, N. Y.

Mention the American Florist when writing.

Gardens will be replanted, and plants being scarce in some localities will make crops later. We are having fine rains, and it is "a growing season" all around. The markets begin to show the beauty and variety for which this city is famous, the semi-tropical fruit of the West Indies cheek by jowl with the handsomely shaped and beautifully colored apples of the northwest coast, and home-grown strawberries, cherries and vegetables.

Not much progress was made last week in the park inquiry. Witnesses who were called were not forthcoming, and so far as the newspaper reports indicate, the testimony of those who were on hand did not seem particularly germane to the subject in hand, the testimony taking a wide latitude. Another meeting will be held this week. S. B.

SEDALLA, Mo.—Joseph Gelven, senior member of the firm of Jos. Gelven & Son, will retire from business and the junior member, Chas. H. Gelven, has moved to Cape Girardeau where he has bought a tract of ground near the center of the city and will build at once four greenhouses each 14x75 feet and a brick service building 16x75 feet including boiler and packing rooms and offices. Mr. Gelven will install two boilers at once and he expects to build five more greenhouses 14x75 feet each next fall or spring. Garland gutters and cast iron posts will be used in the greenhouses.

## Orchids

### TRADE DULL.

The weather the first part of the week was warm and springlike but at time of writing it is cool and raining. Graduating exercises and Memorial day perhaps will help trade to a certain extent, otherwise it may be considered as dull. Carnations, good stock, have stiffened in price. Some good Cape jasmines with fancy flowers and stems were sold. Peonies have been coming in freely. Roses are in fair supply, white, however, being somewhat scarce. Sweet peas are keeping up in price. Hardy ferns are in but do not come as large as in former years. Field daisies from Kirkwood are now coming in, also iris in limited quantity.

The annual flower sermon was preached last Sunday at Christ Church cathedral by Bishop Anderson as provided for by the will of Henry Shaw. The altar was decorated with plants and cut flowers.

The Mary institute is out with the announcement that there will be no flowers carried by the graduates this year. Anyone desiring to send flowers must send them to their homes.

Grimm & Gorly report trade as good. Their downtown location is improving, many stores adjoining starting up, which draws the crowds. They have special sale days.

F. H. Weber can be seen in the parks and boulevards with his new machine, which is one of the latest. Fred reports trade good.

The sunken gardens at the Suburban Garden park are nearing completion. They will have a very pretty appearance when done.

August Hartman is in with some nice sweet peas. His brother George is in with carnations. W. F.

Market and 49th Sts., Philadelphia, Pa

Mention the American Florist when writing

LA CROSSE, WIS.—The regular monthly meeting of the Florists' Society was held May 17. G. A. Selenthin gave a talk on "The Watering Pot" which was very interesting and led to considerable discussion by the members present. C. Schaefer gave an interesting talk on the growing of carnations. Among the points he made was that the soil and climate of Wisconsin were especially adapted to the growth of carnations, and he believed that finer carnations could be grown in Wisconsin than in any other state. At the next regular meeting Mr. Hae-bich of the John A. Salzer Seed Co. will have for his subject "The Growing of Chrysanthemums," and J. Wagner will talk on "The Growing of Cyclamens."—J. S. M.

## Roses plenty

In sorts listed page 789, May 14.

On own roots; summer grown; winter rested.

**THE LEEDLE FLORAL COMPANY**  
SPRINGFIELD, OHIO

Worcester, Mass.

The horticultural features of this city are very noteworthy at the present time. Beautifully situated as it is in one of the finest sections of the Bay state and inhabited by a thrifty and intelligent class of people, it is unnecessary to state that horticultural and floricultural features receive large attention. The parks and public grounds show evidence of intelligent and careful work and the same can be said of numerous private estates. Turning to the commercial men who supply the material, we find them prosperous.

H. F. A. Lange has a very handsome retail store at 294 Main street, with a glass area of over 100,000 square feet on Mt. Vernon street. A leading feature of his greenhouses is the many fine geraniums, fuchsias and other pot and bedding plants grown. Lilies for cutting are grown all the year around and his store takes the entire product of the range.

At the Worcester Conservatories, of which L. C. Midgley is proprietor, there is a fine showing of carnations, roses and other stock for cutting as well as a good stock of bedding plants. This range has a glass area of over 100,000 square feet. Under the careful management of Mr. Midgley during the past six years the business has been very prosperous.

H. F. Littlefield has two handsome stores on Main street and does an immense retail business, a feature of which is three automobiles for deliv-

# "Heacock Quality" Palms Mean More Trade For You

Your customers are commencing to stay out-of-doors more now; they are thinking of porch plants—and most particularly of PALMS.

You can sell Heacock's Palms to your trade—profitably because of their handsome, thrifty appearance and great vigor; they are an ornament anywhere.

We grow Palms by the thousand, from seed; we know how to produce the best results, and our stock is vastly better than imported Palms at any price—yet ours cost no more, as you'll see from the following list. Our stock this year is extra-fine and we'd like a trial order from you. We have splendid freight connections and can ship promptly.

ORDER EARLY

LIMITED QUANTITY.

Bobbink & Atkins,

Rutherford, N. J.

San Francisco.

Trade conditions still continue to be very quiet, with no falling off in stock, which still pours into the market in unlimited quantities. Sweet peas are now being bought as low as 25 cents per dozen bunches, carnations from 10 to 20 cents per dozen, and Easter lilies from 50 cents to \$1 per dozen.

Last Sunday the Pacific Coast Horticultural Society held its first monthly outing, on which occasion the members visited the nurseries of J. A. Carbone and E. Gill, both of Berkeley. The members were gloriously received at both places, and they are now anxiously looking forward to the next outing, which will probably be held in the San Mateo district.

The Panama-Pacific exposition committee, appointed by the local horticultural society, composed of H. Plath, V. Mairala and A. J. Rossi, reports that it has succeeded in raising \$4,000 for the purchase of stock in the Panama-Pacific exposition corporation.

## Have You Ever—

Talked with a brother florist who uses Morehead Return Steam Traps?  
If not, do so at first opportunity and be convinced that you must install one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

# AMMONIATED LAWN LIME

Kills Weeds — Makes Grass Grow

Applied as a light top dressing to lawns it kills all flat leaved weeds, such as Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc., in 48 hours, and without other fertilizer produces a wonderful, luxuriant, rich, green growth of lawn grasses, which is distinctly noticeable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns, putting greens, etc. It saves the grass from being pulled up and in many cases ruined. Grasses take a new vigorous growth, avoiding probable trouble in future.

Quantities: If very weedy, 1 lb. to 40 square feet; 25 lbs. to 1000 square feet (20x50). Half to one-quarter amount if moderately weedy.

## Absolutely Guaranteed

Money Refunded if Not Satisfactory

PRICES: 5 lbs., 50c; 25 lbs., \$2.00; 50 lbs., \$3.50; 100 lbs., \$6.00; 1000 lbs. and over, 5c per lb. We will ship a 100-lb. bag of Ammoniated Lawn Lime at \$6.00, f. o. b. Louisville, to any superintendent of a cemetery, park or private estate where references are furnished. It is absolutely guaranteed as represented, if used as directed; if not satisfactory, we are to be notified within 30 days from date of invoice.

Descriptive Circular on request.

SUPERIOR CHEMICAL CO.,

## Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

For Sale by Leading Jobbers

Further information can be obtained from

D. D. JOHNSON CO., 64-66 Wabash Ave., CHICAGO.

Manufacturers,

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish. When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods, and the Mastin Whitewash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.

## Lightness

If greenhouse lightness be obtained at the expense of structural strength, then your house is a danger trap; if your house is so heavy it shuts out the light, your crop is inferior. You must have a "happy medium," combining sufficient strength and securing the necessary lightness.

The construction that more than meets these requirements is our Iron Rafter one. Send for information.

**Hitchings & Company, 1170 Broadway, NEW YORK.**

## A Gutter With a Reputation

Ask the man who has tried them. For further particulars, write to

**The Foley Mfg. Co.,**

Western Ave and 26th St. CHICAGO.

Minneapolis.

John Monson, of the Minneapolis Floral Co., is throwing out nine houses of carnations and these are to be planted to roses exclusively. On the day of our visit John and his friend, Ralph Latham, were out on the lake after some fish and brought home a good string.

Two new retail stores are being opened, H. B. Chapman Co. at Eighth street and Nicollet avenue, and the Dykeman Floral Shop in the new Dykeman hotel.

# High Quality Not High Prices

Whenever we make a piece of material it is our aim to turn out the very best that can be produced; high quality is our object for nothing else will satisfy the man who wants to build a greenhouse and make a success. There can be no success without this striving after quality; without there be an effort to produce something better than was produced before. The man who believes in selling poor stock, low class goods, and gets what he can for his work, never progresses or succeeds permanently. We are working hard to make our construction more modern, to improve our patterns and our methods of manufacture, we must keep up with the times and stand at the head of the procession or drop out of the line. Prices are to be considered of course, in everything, but it's quality that counts after all. You forget the price but you don't forget the quality—

It's not what you pay but what you get for what you pay—that is economy.

## Steel Return Tubular Boilers

The Most Economical Type of Boiler for Greenhouse Heating. Highly recommended by well-known florists.

**JOHNSTON HEATING CO.,** 138 E. 31st St.,  
NEW YORK.

Spokane, Wash.

The Rose Floral Co. has recently been incorporated with \$100,000 capital stock. Frank T. Monahan is the president of the company and general manager. A large greenhouse covering an acre of ground is to be built at a cost of \$20,000 and negotiations for a downtown retail store are in progress. Besides this the company has purchased a large tract of ground near the northwestern city limits and about 40 acres will be devoted to growing cut flowers and stock for landscape work for which there is a big demand. Moninger, of Chicago, is furnishing the material for the greenhouse. This concern should not be confounded with the Rose Floral Co. of H. J. Volmer, 420 Riverside avenue, which is now, we believe, out of business. Mr. Monahan was connected with the Volmer company but not, we believe, in a financial way. The present firm appears to be on a strong basis and there is every prospect of its doing a large and profitable business.

## The Superior Standard

RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
 $\frac{2}{3}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market

MADE IN NINE (9) SIZES FOR HOT WATER.

## Greenhouse Construction.

By L. R. TAFT.

A complete treatise on greenhouse structure  
and arrangements of the various forms and  
styles of plant houses, for professional florists  
as well as amateurs. All the best and most  
improved structures are clearly described. The  
modern and most successful methods of heating  
and ventilating are fully treated upon. Special  
chapters are devoted to houses used for the grow-  
ing of one kind of plants exclusively. The con-  
struction of hotbeds and frames receives appro-  
priate attention. Over 100 excellent illustrations.  
210 pages. 5x7 inches. Cloth \$1.50.

Greenhouse Heating

# Take our Advice on Boilers

WE MAKE EVERY KIND OF BOILER KNOWN, FROM THE THE SMALLEST TO THE LARGEST, EOTH STEAM AND HOT WATER.

There is no boiler in the world today that can compare with our 1910 Model Greenhouse Boiler for hot water heating. The Kroeschell Greenhouse Boiler was installed to heat over 9,000,000 square feet of glass during the past four years, and it replaced over 1500 cast iron boilers in the short period of six years.

We have no agents; all boilers sold direct to the user—you save the dealer's profit.

## —SPECIALS FOR GREENHOUSES—

## THE GREAT ORCHID EXHIBITION AT BOSTON

### Julius Roehrs Co. Wins Big Prize.

The great orchid exhibition, held under the auspices of the Massachusetts Horticultural Society, opened in Horticultural Hall, Boston, on the evening of May 26. Grand in its conception, it may be truly said that in the quantity and quality of stock exhibited, in the arrangement and careful attention to details the results were magnificent. Never before, in this country, and possibly in no other, was there gathered under one roof such a beautiful and varied collection of orchids, therefore, to the Massachusetts Horticultural Society and its able committee and equally to the exhibitors, congratulations are in order.

Without casting any reflections on previous exhibitions of roses, carnations, chrysanthemums and mixed stock, it should here be noted that the arrangement of an exhibition of this kind was a herculean task compared with them. We have used the word arrangement; building or construction would be more appropriate for the leading prize-winning exhibits, to bring them as near as possible to natural conditions were literally built up, piece by piece, until finally brought to one beautiful and harmonious reality, surpassing the dreams of novelists and romancers.

There were many specimen plants, the size and beauty of which were a revelation, even to many florists, who have not familiarized themselves with orchid growing as it is now practiced by the experts. In addition to the great display of the commercial varieties, there were many altogether unknown to the average commercial dealer. To prove the above it may be stated that one firm exhibited 180 varieties; another 160.

The gold medal and \$1,000 prize was won by the Julius Roehrs Co., Rutherford, N. J. This display called for 400 square feet of space. Against the brick wall of the lower hall light shelves were erected, tier above tier and sloping backwards to the height

of 20 or more feet, palms being used as a background. A large tree fern was used as a centerpiece and to its trunk moss covered pots of beautiful and gracefully drooping odontoglossums and others of similar habit were secured in a most artistic manner. Others of the same genus, the pots concealed among the palms, were freely distributed throughout the background. The remainder of the 400 square feet of space was a continuous and effective arrangement of cattleyas, denbrobiums, oncidiums, phalaenopsis and the many others which this noted exhibit contained.

Lager & Hurrell, Summit, N. J., were also contestants for the gold medal and \$1,000 prize and their exhibit adjoined that of the Julius Roehrs Co. It was arranged, necessarily, on account of space and location, much on the same general plan, but with some variations in background and centerpiece. The exhibit of this firm was admirable and of great variety.

On the opposite side of the hall W. A. Manda, South Orange, N. J., had a beautiful and novel exhibit. He had also, in the upper hall, a fine exhibit of cut stock and specimen plants.

The exhibit of Chas. G. Roebbling, (James Goodier, gardener), Trenton, N. J., which took the silver medal and \$500 prize, was located in the center of the upper hall. It was in the form of a summer house, wires covered with *Asparagus plumosus nanus* being strung overhead with ferns at various points on the ridge. The orchids were banked around the sides and placed on tables in the interior, a number being suspended from the roof as a canopy.

In section No. 2, which called for 150 square feet of space, commercial growers excluded, the exhibit of E. B. Dane, Brookline, Mass. (Donald McKenzie, gardener), and Walter Hunnewell, Wellesly, Mass., (T. D. Hatfield, gardener), which took first and second prizes respectively, were both

clever groupings of orchids and foliage plants.

The display of cut orchids, ferns and foliage plants in section No. 5, by J. A. Manda, West Orange, N. J., which took first prize, though occupying comparatively small space was generally conceded to be a masterpiece of arrangement in addition to the fine stock which it contained.

The exhibit of J. T. Butterworth of South Framingham, Mass., of specimen orchids was very creditable and was awarded a special prize of \$25.

While the orchids were, so to speak, the star attractions, there were many other fine exhibits. The center of the lower hall was made beautiful by a collection of immense azaleas arranged under the direction of an expert landscape gardener. These were exhibited by Professor Sargent, Brookline, Mass. (Chas. Sanders, gardener). At the end of the hall a number of immense and beautifully flowered rhododendrons were staged. These were exhibited by Walter Hunnewell of Wellesly, and Dr. C. G. Weld of Brookline (G. Rust, gardener). They were surrounded by a fine collection of *Cocos Weddelliana*, grown at the Le Lion Nursery, Belgium.

R. & J. Farquhar's exhibit of Chinese plants was noteworthy. Chas. Roland, Nahant, Mass., made a fine exhibit of new varieties of hydrangeas. Edward A. Clark of Jamaica Plain, Mass., made a fine exhibit of flowering and foliage plants, arranged in pyramidal form and bordered with beautiful, well flowered plants of *Calceolaria rugosa*. Walter Hunnewell had a good exhibit of *Fuchsia Black Prince*.

The Waban Conservatories, Natick, Mass., exhibited a vase of White Killarney roses that were remarkable for size and bloom and length of stem. Wm. Sim, Cliftondale, Mass., exhibited a splendid collection of sweet peas. Duncan Finlayson of the Weld Gardens, Brookline, Mass., a novel collection of campanulas (Canterbury bells).

Henry A. Dreer, Philadelphia, exhibited 69 varieties of hybrid tea roses. John Lewis Childs, Floral Park, N. Y., exhibited gladioli. The Mount Desert Nurseries, Bar Harbor, Me., exhibited *Nephrolepis Milleri*, a new and promising fern. There was a beautiful display of palms and foliage plants from the Harvard Botanical Gardens, Cambridge. Thos. Meehan & Sons, Inc., Germantown, Pa., exhibited a collection of Japanese maples, golden privet and pæonies.

The following acted as judges of the exhibits: Oakes Ames, North Easton, Mass.; Arthur Herrington, New York; Alfred Lovelace, Lenox, Mass.; T. D. Hatfield, Wellesley, Mass.; J. E. Rothwell.

#### Official List of Awards.

Display of orchids (plants in bloom) arranged for effect, embracing at least 20 genera—Julius Roehrs Co., Rutherford, N. J., first; C. G. Roebing, Trenton, N. J., second; Lager & Hurrell, Summit, N. J., third.

Display of orchids (plants in bloom) arranged for effect, embracing at least 10 genera—E. B. Dane, Brookline, Mass. (D. McKenzie, gardener), first;

Walter Hunnewell, Wellesley, Mass. (T. D. Hatfield, gardener), second.

Best recently introduced orchid (plant) not previously exhibited in the United States—Lager & Hurrell, White Cattleya gigas.

Best new seedling orchid not previously exhibited in the United States—Julius Roehrs Co., Cattleya Dusseldorfii.

Largest and best display of cut orchids arranged with ferns and other foliage—Joseph Manda, East Orange, N. J., first; W. A. Manda, South Orange, N. J., second.

Collection of cut orchids of new varieties not before exhibited in the United States—W. A. Manda.

Group of flowering and foliage stove or greenhouse plants arranged for effect—Julius Roehrs Co., first; Edward MacMulkin, Quincy, Mass., second.

Stove or greenhouse plant in bloom, not previously exhibited in the United States—Thomas Roland, Nahant, Mass.

Coniferous plant, not yet disseminated, likely to be hardy in Massachusetts—W. A. Manda, with *Juniperus* species.

Six orchids, distinct genera—Julius Roehrs Co., first; Mrs. B. B. Tuttle (M. J. Pope, gardener), Naugatuck, Conn., second.

Three orchids, distinct genera—W. A. Manda, first; J. T. Butterworth, South Framingham, Mass., second.

Three cattleyas, distinct species—W. A. Manda, first.

Specimen cattleya, any species—J. T. Butterworth, first, with *Cattleya Mossiæ Reineckiana*, and second with *C. Mossiæ* Mrs. Butterworth.

Specimen cymbidium—Weld Garden, Brookline, Mass. (Duncan Finlayson, gardener), first; W. A. Manda, second.

Three cypripediums, distinct species—Julius Roehrs Co., first.

Specimen cypripedium—Dr. C. G. Weld, first.

Specimen dendrobium—Weld Garden, first; Julius Roehrs Co., second.

Six miltonias—Walter Hunnewell, first; J. T. Butterworth, second.

Specimen miltonia—J. T. Butterworth, first; Walter Hunnewell, second.

Six odontoglossums, not less than three species—Julius Roehrs Co., first.

Specimen odontoglossum—Walter Hunnewell, first; J. T. Butterworth, second.

Specimen oncidium—Mrs. B. B. Tuttle, first; Julius Roehrs Co., second.

Specimen vanda—Howard Gould, Port Washington, N. Y. (Harry Turner, gardener), first.

Specimen orchid, any genus not otherwise provided for in the schedule—Col. Chas. Pfaff, South Framingham, Mass., first; Mrs. B. B. Tuttle, second.

CATTLEYA GIGAS ALBA

The Unique Albino Exhibited by Lager & Hurrell at the Boston Orchid Show.

JULIUS ROEHRS CO.'S GOLD MEDAL AND \$1,000 GROUP AT THE BOSTON ORCHID SHOW, COVERING 400 SQUARE FEET

Best specimen orchid in the exhibition—Julius Roehrs Co., with *Cattleya Mossiae*.

Group of flowering and foliage stove or greenhouse plants arranged for effect—Julius Roehrs Co., first; Edward MacMulkin, second.

Best species of stove or greenhouse plant in bloom, not previously exhibited in the United States—Thos. Roland, first.

Gratuities: J. T. Butterworth, group of orchids; Mrs. J. L. Gardner, Brookline, Mass., group of orchids; G. L. Freeman Co., Fall River, Mass., display of cut orchids; W. A. Riggs, group of flowering and foliage plants; Waban Rose Conservatories, Natick, Mass., White Killarney rose; Edward MacMulkin, decoration of orchid and flowering plants; Dr. C. G. Weld, specimen azaleas; M. A. Patten & Co., Tewksbury, Mass., display of carnations; Mrs. H. F. Durant, Wellesley, Mass., *Statice Holfordii*.

Gold medals: Julius Roehrs Co., group of Brasso-Cattleya; Robert Cameron, Cambridge, Mass., group of stove and greenhouse plants; Prof. C. S. Sargent, Brookline, Mass., collection of azaleas; R. & J. Farquhar & Co., Boston, Mass., group of shrubs and climbers from Japan; Thos. Roland, new Japanese hydrangeas.

Silver medals: J. T. Butterworth, group of orchids; Gen. S. M. Weld, specimen rhododendron; Walter Hunnewell, specimen rhododendron; Establishment Horticole le Lion, Gand, Belgium, collection of *Cocos Weddelliana*; T. D. Hatfield, Wellesley, Mass., superior cultivation of fuchsias; Duncan Finlayson, Brookline, Mass., group of Canterbury bells and other plants; Thos. Roland, collection of hydrangeas; Chas. Sanders, Brookline, Mass., collection of new single tree peonies; Wm. Sim, Cliftondale, Mass., collection of sweet peas; Henry A. Dreer, Philadelphia, Pa., collection of hybrid tea roses.

Bronze medals: Mrs. J. L. Gardner, group of orchids; N. F. Comley, collection of sweet peas.

First class certificate of merit: R. & J. Farquhar & Co., Begonia Pink Beauty; Waban Rose Conservatories, White Killarney rose; Mount Desert Nurseries, Bar Harbor, Me.; Nephro-

lepis Milleri; G. L. Freeman Co., potting materials.

Honorable mention: G. L. Freeman Co., collection of orchids; W. W. Rawson & Co., Boston, Mass., collection of tulips; R. & J. Farquhar & Co., Pelargonium Ostergruss, Geranium Mrs. Chas. Pfaff, and seedling iris; Julius Roehrs Co., Croton Fred Sander; Howard Gould, Malmaison carnations; Thos. Meehan & Sons, Philadelphia, Pa., collection of Japanese maples, peonies and golden privet; John Lewis Childs, Floral Park, N. Y., exhibit of gladioli.

#### Notes.

Though overshadowed by the big displays, the specimen plants, singly and in small groups were very noteworthy. This was particularly true of the gigantic *Cattleya Mossiae* exhibited by the Julius Roehrs Co.; *C. gigas* and dendrobiums by W. A. Manda; cymbidiums by the Weld Gardens, Brookline, Mass., Duncan Finlayson, gardener; cymbidiums from Dr. C. G. Weld, Brookline; *miltonias* from J. L. Butterworth, South Framingham, Mass., and *oncidiums* from Mrs. B. B. Tuttle, Naugatuck, Conn., M. G. Pope, gardener.

A plant that was an object of marked interest in the collection of Lager & Hurrell was a pure white variety of *Cattleya gigas*, which they value at \$5,000. Though it is now many years since this *cattleya* was first discovered, this is said to be the first pure white specimen ever found. Another striking feature of this firm's exhibit was *Dendrobium thyrsiflorum*, which, while not in the class of *C. gigas*, is nevertheless fine for display purposes.

Jas. A. Newsham of the Magnolia Nursery, New Orleans, La., was on the ground throughout the whole show. Mr. Newsham is a heavy importer of orchids, having his collectors largely in Central America. His young son, 16 years old, recently made a trip into the perilous regions where orchids

are found and came back with the goods.

I. Rosnosky, representing the H. F. Michell Co., Philadelphia, was on hand with a supply of jointed foot rules, which he distributed to worthy persons. Thanks, "Rosky," they will come handy to measure the chrysanthemums in the fall.

A writer for a "yellow" horticultural journal has been telling a reporter for a Boston newspaper that most anybody can grow orchids. So they can, brother, so they can—if they know how!

In reviewing the awards it appears that New Jersey captured the best things and we trust that nobody will hereafter revive that stale joke about it being a "foreign country."

There are people among the general public who used to think that orchid was a misprint for orchard. It will not take many shows like this one to enlighten everybody.

We hate to strike a blow at a great and established industry, but it is a fact that Boston beans don't taste as good as they did when we were boys.

Robt. Craig, Philadelphia, was an early visitor. His is a familiar figure at exhibitions and he is always the center of an interested group.

An interested as well as an interesting visitor was Geo. Field of Washington. He has for years been a successful grower of orchids.

The music of the Boston philharmonic orchestral club was a largely contributing feature to the enjoyment of the exhibition.

The McRorie-McLaren Co., San Francisco, Calif., sent a contribution to the show, in the way of some new and rare orchids.

Julius Roehrs celebrated his victory with a large party of friends at the Parker house Thursday evening.

Robt. Cameron is equally at home

LAGER &amp; HURRELL'S PRIZE GROUP AT THE BOSTON ORCHID SHOW, COVERING 400 SQUARE FEET.

in superintending a botanical garden or an exhibition.

New York is responsible for that story of the performing orchids. Chicago and Philadelphia always knew better, and Boston, with an orchid show to her credit, is now safe.

George Watson said that *Brassavola Digbyana* always reminded him of a Skye terrier, and this as we went out to lunch.

The number of species and varieties represented in the various orchid displays was conservatively estimated at 500.

P. Welch is writing a new song, "Come Back to Boston, Algernon, Algernon," which will be out soon.

John Farquhar and Robert Cameron were responsible for the excellent arrangement of the exhibits.

"I don't know" is obsolete among Bostonians. They now say, "I can't tell you."

There are no skeeters on Jersey orchids.

#### Visitors.

The following were among the visitors noted:

John T. Allen, Newport, R. I.  
Oakes Ames, North Easton, Mass.  
Chas. Anderson, Lowell, Mass.  
Chas. H. Atkins, of Bobbink & Atkins, Rutherford, N. J.  
Geo. E. Baldwin, of Carrillo & Baldwin, Mamaroneck, N. Y.  
H. Barker, Chicago.  
M. A. Barnard, representing Stuart Low & Co., London, Eng.  
Leonard Barron, New York.  
Wm. C. Barry, Rochester, N. Y.  
A. T. Boddington, New York.  
Wm. E. Cahill, New York.  
Arthur Cowee, Berlin, N. Y.  
Robert Craig, Philadelphia, Pa.  
J. Curnow, Akron, O.  
Robt. De Schryver, Holyoke, Mass.  
B. Dolby, Dalton, Mass.  
Wm. Duckham, Madison, N. J.  
Peter Duff, Orange, N. J.  
A. Farenwald, Philadelphia, Pa.  
A. F. Faulkner, representing the American Florist, New York.  
Geo. Field, Washington, D. C.  
Conyers B. Flen, Jr., representing Thos. Meehan & Sons, Germantown, Philadelphia, Pa.

A. Forbes, Newport, R. I.  
James Goodier, Trenton, N. J.

Jno. Urquhart, Newport, R. I.  
Geo. Watson, Philadelphia, Pa.  
Chas. Weathered, New York.  
A. H. Wingate, Lenox, Mass.

## ORCHID NOTES.

### Orchids for Decoration.

SEE SUPPLEMENT WITH THIS ISSUE.

It will hardly be denied that cattleyas alone, the orchids most grown for cutting in this country, are not the best of flowers for light and effective decorations, though they are exquisite when used in conjunction with others. Some of the long, graceful flower spikes of the *oncidiums*, *calanthes*, *odontoglossums*, *miltonias* and others are excellent for associating with the heavier flowers of cattleyas, while the well known *Dendrobium Phalaenopsis* and other members of this genus are showy and bright when judiciously used. *Phalaenopsis* again is a beautiful genus for cutting and the flowers are lasting and exquisite in every way. Then we have the bright red *Epidendrum Voiteillum* and *Sophranitis grandiflora*, the showy little *masdevallias* and such species as *Laelia harpophylla* and *L. cinnabarina* all some effective shade of red or orange or the two in mixture to liven up the more neutral tints of the commoner orchids.

There is in short no lack of variety if it were only grown, but the commercial orchid grower rightly fights shy of many of these as he knows they would not be in sufficient demand to recoup him for his trouble and the money spent on them. Orchids are difficult flowers to arrange properly so as to get the best results—or at least they want different treatment to almost any other family of plants. In a general way a decorator is safe in showing the flowers in the way they grow naturally, so that the flower looks out at you for every orchid has a most attractive natural pose and much of its beauty is lost if the flowers are allowed to face any other way. As a rule no other flowers

should be mixed with orchids though lily of the valley is frequently so used with good effect, the pure white graceful spikes contrasting well with such flowers as cattleyas. As to green almost anything of a light nature can be used. *Asparagus plumosus* is excellent for use with the smaller, brighter colored species and varieties while *Adiantum Farleyense* is the green "par excellence" for associating with the heavier, lighter colored cattleyas. In this as in other decorative work a good deal has to be left to the taste of the decorator and a natural taste for graceful arrangement and a good eye for color blending are useful.

#### Packing Cut Orchids for Shipment.

Notwithstanding the long lasting qualities of orchids generally the substance of the flowers is of such a nature that they are easily injured by rubbing against each other, or against the boxes in which they are packed, in transit. This makes careful packing absolutely necessary if the flowers are to arrive at their destination in good condition. Perhaps the worst material in the world for packing cut flowers in is cotton wadding, yet it is even now, despite all that has been written and said against it, used frequently, and it is no uncommon sight to see the commission men busy picking out the wooly rubbish from among the petals of gardenias, orchids and other choice flowers, showing that they have been in contact with it. Now as a buffer or cushion to flowers, with oiled paper or something else between them to keep them apart, there can be no serious objection to the wadding though slightly damp sphagnum moss is a far better and cheaper thing. But wherever the cotton comes in direct contact with deli-

cate flowers there is almost sure to be discoloration of the petals.

For cattleyas nothing is so good as shallow flat boxes of wood, only just heavy enough to carry safely and take a single layer of flowers. A little damp moss should be placed in the bottom and this covered with oiled paper allowing the latter to come up the sides and long enough to turn back over the flowers when placed. The flowers must then be laid in lines, closely but not crowded, and, as soon as one layer across has been put in, moss wrapped in paper should be laid over the stems and a cleat placed over this. The cleat can either be lightly nailed through the end or tied through the bottom. We prefer the latter as the flowers are not so liable to injury when removing them from the box by cutting the strings at each end as when nailed cleats are used. Follow this up until the box is filled, carefully placing strips of oiled paper over each layer of stems for the next layer of flowers to rest on. When finished bring the paper from the sides over onto the flowers and the package is ready for the lid. But always see that the flowers are well covered with the paper as it keeps out dust. Cattleyas or other orchids packed this way are absolutely safe. The boxes may be turned upside down or thrown about in any way but the flowers are perfectly safe and cannot be injured if the work has been carefully carried out.

Other flowers, such as carnations, peonies and roses may be packed in layers one above the other and the firm manner of their packing will prevent them tossing about and bruising but we do not advise this method for orchids of any kind. In fact, it would be a fatal mistake for the petals would crush and the flowers be totally useless on arrival. *Cypripediums*

may be treated similarly to cattleyas but flowers with longer spikes like *phalaenopsis*, *oncidiums* and *vandas* will have to be secured at more than one place. But the idea is the same. Let the flowers face upwards, secure them so that they cannot possibly move about in transit and see they are well covered on all sides with the soft, yielding oiled paper and all will be well. It costs a lot of money to grow good orchids and it is well worth while to take care of them after they are grown. Suitable labels with instructions plainly printed upon them to keep the flowers from extremes of temperature should always be used and while leaving time enough before trains to prevent any hurry, always have everything in readiness and pack just at the right time so the boxes will not have to lay around waiting for train time.

#### Orchids as Commercial Cut Flowers.

If the average orchid grower, who has a knowledge of the wonderful variety contained in this great family, were asked if he could name 50 kinds that are good for cutting he would probably say yes. Doubtless he could, but not one-half of these could be profitably grown and sold commercially. The number of orchid species that can be so grown is, in fact, remarkably small. The cattleyas known as the labiata group, consisting of the autumn flowering *C. labiata*, *C. Trianae*, *C. Mendelii*, *C. Schroderae*, *C. Mossiae*, *C. Gaskelliana*, *C. gigas* and one or two others not so well known, are the cream of commercial orchids for cutting without a doubt. Their great beauty and the fact that a nearly constant succession of blooms can be kept up by growing the different species are largely responsible for this. Besides this, these cattleyas are

W. A. MANDA'S GROUP AT THE BOSTON ORCHID SHOW, COVERING 400 SQUARE FEET.

among the easiest of all orchids to grow and thrive well under the somewhat rough and ready conditions of the ordinary commercial place. They grow and flower freely under conditions that would be death to the more sensitive *phalænopsis* and other plants equally or even more beautiful and just as useful for cutting.

Outside the labiata section of this genus we have the upright growing species of which *C. Loddigesii* (Harrisonia), *C. Bowringiana* and *C. Skinneri* are perhaps the best known examples. They are not so popular as the labiatas nor so large flowering, but they are beautiful and attractive and sell well when labiatas are short; *Loddigesii* in spring before *C. Mossiae* is ready and *Bowringiana* in fall. Then we have the *lælias*, near relatives of the cattleyas, with only slight botanical differences to separate them. The Mexican kinds, of which *L. anceps* and *L. autumnalis* are best known, are best for cutting, the flowers occurring on long slender spikes that make them useful for many kinds of decoration. They do not, however, last so well as the cattleyas and for this reason will never probably be as popular in the market. There are one or two of the Brazilian kinds too, with a cattleya-like habit such as *L. purpurata* and *L. elegans* that ought to sell well but they are comparatively untried as yet.

In cypripediums the old *C. insigne* is the standby for cutting. The flowers of this fine old orchid last remarkably well, both on the plant and in a cut state, and can be used over and over again. This, too, is extremely easy to grow and no one with a fair knowledge of plant culture need be afraid to tackle it. Other species sometimes seen on the cut flower markets are *C. barbatum* and *C. villosum* besides a number of hybrids, of doubtful parentage, perhaps, but undoubted vigor and freedom of flowering. Then we have the dendrobiums. There are numbers of beautiful orchids among these, bright, showy and free flowering plants that are worthy a place in any collection but they are not commercial varieties. Take away the pure white *Dendrobium formosum* and the showy *D. Phalænopsis* and there is hardly another species that one would care to invest in as a commercial cut flower.

*Vanda cœrulea* is a fine orchid for cutting and one that seems popular on most markets. If it was grown cooler and the best blue varieties selected there would be many more sold, for it cannot be denied that many of the varieties grown would be better described as dirty white than blue. It is a beautiful plant in its best forms and one that will always be popular. The moth orchids or *phalænopsis* are undoubtedly beautiful and when the flowers are produced they sell well. But the plants will not put up with the rough treatment many of the others named get along with. The leaf system of these orchids is very sensitive to changes of temperature and atmospheric conditions, and it is not at all unusual for a grower to find that the leaves put on with so much care and trouble in summer are checked by some means in winter and fall off in spring. But a careful

grower who understands his plants should make money out of *phalænopsis*.

There are several *oncidiums* that are more or less popular in the market and there are others that would probably make their way if they were grown. *O. varicosum* and its variety *Rogersii* are two of the most popular, the variety being much larger than the type though the type is frequently sold for it. *O. tigrinum* is also occasionally seen, the bright yellow, violet scented flowers being most attractive. The variety *ungiculatum* produces flowers that are not so good individually but the spikes are longer and looser and better fitted for table work. They usually flower in November and December. Other species occasionally seen in the markets, but which should be tried out with caution, are *O. Mar-*

if their culture were taken up with anything like spirit there would be money in them for a demand for table and similar decorations already exists and could be increased. *C. Veitchii* and the different varieties of *C. vestita* are only kinds cheap enough to grow in quantity. They are easy to do and never fail to flower finely. While the above by no means exhausts the list of orchids that may be grown for cut flowers we think that they may well be described as the cream of those likely to be a success from a money point of view as cut flowers.

Speaking of growing orchids on a commercial basis, there is no doubt as to its paying as long as prices keep up as they are and there is every probability they will do so. Growers, in fact, will be studying their best in-

CATTELEYA HOUSE AT JOSEPH HEACOCK CO.'S, WYNCOTE, PA., 25 X 250 FEET.

*Cattleya Mossiae* is the Species in Flower.

*shallianum*, *O. sarcodes*, *O. flexuosum*, *O. crispum* and *O. Forbesii*. All are beautiful but as purely commercial orchids we would advise the beginner to go slow with them. Totally distinct from all other orchids are the *calanthes*. They are grown to some extent for cutting and we believe that

terests if they keep prices up and do not sell below a certain figure for just as soon as orchids become the property of anyone with a few cents to spend the better class of patrons will leave them alone. It is far better even to let a few go to waste than to slaughter the price. Then it is quite

easy to keep the flowers for a considerable time. Unlike a rose or a carnation, which has to be cut just when ready, a cattleya can be kept from one to two weeks on the plant and even then will last some time in water so, in case of a glut, they can be held. One thing is absolutely necessary before going into their culture and that is capital. It is useless starting with a few plants for with them a grower can never keep up a succession of flowers and his customers can never depend on getting them. But where there is enough money at hand to buy a good stock of plants, this will be returned in a very few years in the money taken in for the cut flowers. At an average of 40-50 cents per flower there is good money in growing cattleyas and there seems to be no good reason why this price can not be maintained for a great part of the year.

ORCHIS.

#### Heacock's Orchids.

The accompanying illustration from a photograph taken May 5, is of a portion of the cattleya house of the Joseph Heacock Co. at Wyncote, Pa. Things are not done by halves at this progressive place. When Mr. Heacock gets it in his head to grow anything, he buys it in quantity so that a whole house or several, may be devoted to its culture and enough work provided to keep an expert busy in caring for and producing something in the way of flowers, that will be a factor in the market. In this stock are now 6,000 cattleyas, established plants, which have produced a splendid cutting of flowers the past season. To this are being added 6,000 more, part of which are in and the balance on the way. These will entirely fill the house 25x250 feet. Another house 20x60 feet is devoted entirely to cypripediums which Mr. Heacock has grown for a number of years with great success. He is very enthusiastic over orchids. He admires them as a flower and says they are a success commercially as there appears to be an ever increasing demand for the flowers at all seasons.

K.

#### W. H. Elliott.

BRIGHTON, MASS., AND MADBURY, N. H.

W. H. Elliott, president-elect of the American Rose Society, has long been known as a successful grower of roses.

The Doylair New Principle Furnace.  
As Applied to Steam Boiler.

For years, too, he has been noted for the fine quality of *Asparagus plumosus nanus* and *A. Sprengeri* grown at his Brighton range. Within the past 10-12 years, as a grower of fine roses, he has achieved national prominence. His purchase of several hundred acres of land at Madbury, N. H., some 10 years ago and the subsequent erection of two great rose houses is fresh in the minds of many connected with the trade.

This enterprise has continued to prosper and no better roses are seen in the Boston market than those which come from his ranges. Killarney, Richmond, Rhea Reid and his new rose, Mrs. Humphrey Ward, are largely grown. At the Brighton range there is a great stock of fine summer rose plants coming on, notably Kaiserin and My Maryland. There, too, an immense stock of young plants is propagated and sold to the trade. Mr. Elliott is well pleased with the red rose, Rhea Reid, and says it is a money maker.

## THE ALLIED TRADES

THE new piping system introduced by the Kroeschell Bros. Co. of Chicago is finding great favor and is being installed in all parts of the United States and Canada.

THE Richards Manufacturing Co., of Aurora, Ill., is about to place on the market a light and portable soil carrier—equally valuable for use inside of greenhouses as well as taking plants to the field.

DURING the 10 months ending April 30, 1910, the exports of pipes and fittings from the United States to Canada nearly doubled over those of the same months in the previous year. The figures in pounds are 66,721,936 and 38,621,160.

#### The Doylair System of Combustion.

We have been much interested in the Doylair system of combustion, especially as applied to steam and hot water boilers. Saving coal, or, to be more correct, making every pound of coal used do its proper amount of work is a live problem for all greenhouse men. There is a proper mixture of air and gas—the gas being of course distilled from the coal—and a proper temperature at which this mixture burns, which are necessary to effect perfect combustion. These are arranged for in the Doylair system. When this proper mixture is produced there is no need of forced draught or of any draught at all from the ash pit and consequently no clinkers are formed upon the grate bars. The air needed is obtained from ducts at the side of the furnace and enters the combustion chamber above the fire. This heated air and gas combined is very even in its burning properties and at all times there is a slow but intensely hot fire in the chamber.

The coal is supplied from above and falls down as needed, that is, as it is coked by the heat of the fire below. Thus there is no need of opening and

NEW HOUSES AT THE RANGE OF WM. H. ELLIOTT, MADBURY, N. H.

The Large House is 60x1340 Feet, the Smaller One 54x812 Feet.

EXTERIOR OF THE RANGE OF W. H. ELLIOTT, BRIGHTON, MASS.

shutting fire doors and allowing cold air to rush in over the fire, wasting coal and causing black smoke to issue from the stack. There are no fire doors, in fact, in the general observance of the term, and only the requisite, steady amount of air necessary for the proper mixture is allowed to enter the fire chamber through the air ducts referred to. Besides this, air is admitted to the outlet or flue just above the boiler and this checks the suck or draught of the flue, preventing waste of fuel and consequently smoke. Now every green-houseman knows what a great nuisance the chimney stack is when belching forth great clouds of smoke. This precipitates soot which falls upon the glass keeping out light and finding its way through the ventilators to damage the flowers. All this is prevented by the use of the Doylair system, which has been thoroughly tested, not only on stationary plants, but on locomotive engines actually running, a train having been taken from the stock yards in Chicago to Argo and return, a distance of 25 miles, without any sight of smoke

coming from the chimney and with practically no stoking.

The little amount of skilled labor needed is, in fact, one of the side issues where considerable saving is made, though even this, important as it is, cannot compare with the wonderful saving in fuel that is caused by the use of this device. The manufacturers claim that they can show, by actual working tests, a saving of 50 per cent in coal when their system is installed and properly understood, and its working is so simple that any one can manage it. Furnaces equipped this way cost very little more than the ordinary boiler and take up less room per unit of heat produced. Then its great cleanliness and the small amount of ash made, even from coal of low quality are points worth considering in regard to this device. We believe it is a thoroughly practical and excellent system and can strongly advise all who are interested to call and see it in operation at the offices of the Globe Heat Power Co., at 213 Randolph street, Chicago. This firm has its own foundry at Gibson, Ill., working full time making the castings, as well as

three other foundries working for it on contract. Besides this the company is looking out for a suitable site for another large foundry to be built specially for its needs.

#### Elliott On Large Houses.

The experience with large houses, I think, has led us all to find an increasing number of advantages and a decreasing number of disadvantages. The great advantage is the improved growing condition of the plants, resulting in much better returns from houses of this kind, caused chiefly by purer air and more even temperature. Then the superintendence and general handling of a house of this kind is much simplified over a large number of smaller houses; crops can be much better regulated and section men have a much better comparison of their success in handling stock in a house of this kind than in the separate houses. Replanting is done with less trouble in my last house than in any I have ever handled; in fact, there is an endless number of advantages that would be hard to enumerate.

HOUSES BUILT ON THE DIETSCH SHORT-ROOF CONSTRUCTION PLAN IN 1902 FOR THE H. A. DREER CO.

The disadvantages are largely structural. The houses must be strong to stand the wind pressure, outside and in. They should be kept in thorough repair to prevent leakage caused by the accumulation of water on these wide roofs. We have disadvantages, at times, in having to cart our soil a great distance. That could be largely overcome by mixing a pile of soil at both ends of the house. The heating question is one that bothers us very little; in fact, when I build again I will certainly build wider. I think, however, that 1,340 feet is long enough for any house.

W. H. ELLIOTT.

Brighton, Mass.

#### Cement Beds at the Dale Estate, Brampton.

Solid benches have long been used at the Dale Estate, Brampton, Ont., for roses, carnations and other stock and of late years simple concrete sides have been used, filling in with cinders. With considerable controversy going on as to the value or otherwise of cement benches the following communication from this well known firm is of interest:

"We are pleased to be able to say that our experience with cement benches has been even more agreeable than we anticipated. The soil seems to do better on top of the cinders, and enclosed within cement sides than with the old-fashioned method of construction. We are just throwing out the roses on twelve 350-foot cement benches, that have done excellently during the winter, and all our new construction this season, amounting to three houses each 850 feet long, will be provided with cement benches."

#### The 400 Series Sectional Boilers.

The demand for a large capacity boiler, one that will heat a great amount of pipe and yet take up only a moderate space, has been met by Giblin & Co., Utica, N. Y., in the introduction of the "400 Series" sectional boiler. This boiler is chiefly remarkable for the enormous amount of heating surface coming in direct contact with the fire or the heated gases produced in combustion. The draft is indirect, consequently scarcely any heat is wasted. Much of the heating surface hangs directly in and in actual contact with the flame, and the combustion chamber is formed by heating surfaces. There are also eight long flues directly over the fire box and four indirect flues through all of which the heated gases have to travel, losing to the water on their way the greater part of their heat before they get to the chimney and thus securing the greatest possible amount of heat from the fuel used. The front and rear sections are each made in one piece, which gives great rigidity to the boiler and the clean-cut doors are so arranged that every flue in its entire length is exposed for cleaning purposes. The grate bars are on a greatly improved pattern, strong, showing no disposition to warp, and of great crushing power, while the air spaces are correctly apportioned for perfect combustion. The whole

scheme of the boiler has, in fact, been carefully thought out and it is perfectly made, rendering it of the best possible heat producing quality. Besides being made for steam this boiler is also arranged for hot water heating, for which it is equally powerful. Giblin & Co. also offer a great variety of boilers and generators of smaller sizes, and an immense amount of sundries. Their catalogue is very interesting to anyone who has work of this class in hand or in prospect.

#### Up-to-Date Greenhouses.

It is a striking compliment to the florist business that those who enter it usually begin with a few small and ill-constructed houses, owing to lack

The Late William E. Kelley.  
President of the Horticultural Society of Chicago.

of capital to build better ones, but gradually replace these with up-to-date structures from which they get the maximum quantity and quality of stock at a minimum expense for fuel. There is really no comparison between the old fashioned house, with its heavy sashbars and narrow glass or principals and lights, and the modern greenhouse, in which, owing to the use of well constructed trusses or other supports, the wood is cut down almost to the vanishing point and large panes of glass are used with practically no obstruction to the light. Such houses are suitable for growing any class of stock, the size of the house, of course, being governed by the class of stock that is to be grown therein.

With the exception of large palms and similar stock, which naturally require large houses to develop their full proportions plants as a general rule do best in houses of small or medium height and width. One of the essentials of good market plants is a dwarf bushy habit and when these large high houses have to be shaded, as they must be for plant growing in summer, the plants are too far from the light to do well. For cut flower stock, such as roses and carnations, on the other hand there seems practically no limit to the size

the houses can be built, the one essential point being strength to withstand the weight of snow and the wind pressure. In the matter of handling soil for the benches the extra long houses are at a disadvantage owing to the long haul, though this is sometimes counteracted by taking the soil from each end and, in some instances from a center walk as well.

Heating large houses was once thought to be more expensive and more troublesome than smaller ones but experiments carried out by careful observers have shown that the large body of air in these houses, once heated, holds up better than that in the smaller ones, and is therefore less liable to fluctuation and more regular. Ventilation can be much more easily and simply arranged for in large houses than in small ones. It is a recognized fact that in order to heat the air in a house the colder air has first to be got rid of and this is usually accomplished with large houses by opening the vents slightly on top without chilling the air about the plants. In small, low houses it is not so easy, for at the first upward move of the vents the cold air presses down close to the plants and the volume of heated air is not great enough to counteract the cold coming in. This may not be a very scientific reasoning, possibly not even a correct one, but from a fairly lengthened experience with both classes of house it is the conclusion to which the writer has been forced by observation of the effect upon the plants grown. At the same time, our national propensity for big things should not be allowed to overcome our judgment and to lead to the building of extra large houses just because they are big.

## OBITUARY.

#### William E. Kelley.

William E. Kelley, head of the lumber company which bears his name and whose parents were among the pioneer residents of Chicago, died May 28, at his summer home, Oconomowoc, Wis., after an illness lasting more than a year. He was 60 years old, and is survived by Mrs. Kelley, two sons, William and Asa P., and two daughters, Margaret and Dorothy. He was a graduate of Yale, a member of the Union League club and president of the Horticultural Society of Chicago. Interment was at Graceland cemetery, Chicago, June 1, and a committee from this society met the funeral party at the Union depot and accompanied it to the cemetery. A number of Chicagoans went to Oconomowoc by a special over the C., M. & St. P., where the funeral services were held May 31.

#### Bernard Hoey.

Bernard Hoey, one of the oldest private gardeners of Long Island, N. Y., died at his home, Great Neck, L. I., May 27. He was born in the north of Ireland, but had resided in this country for many years. At the time of his death he was gardener for Clarkson Cowl, Esq., formerly the Windsor estate. He was a bluff and outspoken Irishman who knew his business thoroughly, had a kind heart and was respected by all who knew him. He was about 70 years old and is survived by a number of adult children.

A NEW range caterpillar, said to have been very destructive in New Mexico, is fully treated of, as to its identity, life history, natural enemies and remedial measures in Bulletin 85, Part V, of the Bureau of Entomology.

WE recently noted, in an Illinois town not far from Chicago, a number of carnations that were left in the field without any protection whatever during the past rather severe winter. The plants are growing strongly and are a good indication of what a hardy plant the carnation really is.

THE world renowned English firm, Thos. Rochford, Broxbourne, is said to have relinquished the culture of orchids as cut flowers.

THE annual summer show of the Nassau County Horticultural Society will be held at Pembroke hall, Glen Cove, N. Y., Wednesday, June 8, at 4 p. m.

MISS RHEA REID, for whom Hill's now famous rose was named, was married from the country home of her father at Irvington-on-Hudson, N. Y., June 2.

## National Flower Show.

Members of the committee on the next National Flower Show, to be held in Boston, met in that city, May 25, to consider a suitable location for holding the exhibition. Among those present were F. R. Pierson, Peter Fisher, J. M. Farquhar, Patrick Welch, M. A. Patten, Wm. Sim, Duncan Finlayson, W. H. Elliott and W. J. Stewart. After considerable discussion the Mechanics building, situated on Huntington avenue, near Horticultural Hall, was decided on as the most suitable place. F. R. Pierson was authorized to make the necessary arrangements for securing the building. There is nearly 150,000 square feet of available space and it is generally believed to be the best location in Boston for a great exhibition.

## The Boston Orchid Show.

The first American orchid show has gone down into history and must be accorded a place of high honor in the floricultural records of our country. Approximately 500 species and varieties were displayed and staged with rare skill and taste. It was a liberal education in matters orchidean to have seen this show, and it was unfortunate that a busy holiday season prevented many of the trade from seeing it. The attendance on the part of the general public was not so good as expected and the managers are now of the opinion that a date about two weeks earlier, with a revised schedule of charges, would have given better results. The paid admissions and scale of charges for the five days of the show, opening Thursday and closing Monday (Memorial day) were as follows:

|          |          |         |
|----------|----------|---------|
| Thursday | \$3.00   | 40      |
| Friday   | 1.00     | 735     |
| Saturday | 1.00     | 754 1/2 |
| Sunday   | .50 cts. | 678     |
| Monday   | .50 cts. | 755 1/2 |

While the policy of the Massachusetts Horticultural Society, under whose auspices the show was held, is educational rather than to make profit, or even expenses, in this case the expenditure so far exceeds the income as to be disappointing. The officers of the society, however, are well pleased with the success of the event from an exhibition standpoint, so much so that they have practically decided to make the orchid show a permanent triennial exhibition.

We feel proud of this first great American orchid show and rejoice with the Massachusetts Horticultural Society in its latest triumph.

## American Gladiolus Society.

### PROCEEDINGS OF FIRST MEETING.

At Horticultural Hall, Boston, Mass., on Friday afternoon, May 27, the American Gladiolus Society was formed. A permanent organization was effected with 75 charter members, and a constitution and by-laws were adopted. There was great enthusiasm manifest from beginning to end and the new society starts with brilliant prospects. The meeting was called to order by Maurice Fuld of Boston, who, by his voluntary efforts, deserves great credit for bringing the gladiolus people together. In a few well chosen remarks, interspersed with timely suggestions, Mr. Fuld stated the purpose of the meeting, and then introduced Professor Stone of Amherst College, who presided over the meeting. Professor Stone gave a very interesting talk on floriculture and its relation to the farm and home, and received hearty applause. A paper by H. Youell of Syracuse, N. Y., giving the history of some of the first varieties of the Gandavensis hybrids of gladioli was listened to with evident appreciation and interest.

The new society has accepted an invitation to meet with the Society of American Florists at its annual exhibition at Rochester, N. Y., in August. The Department of Horticulture of Cornell University, Ithaca, N. Y., has tendered the use of its trial grounds for the growing and testing of varieties of gladioli, and the offer was accepted with a lively vote of thanks. A sincere vote of thanks was also extended to the Massachusetts Horticultural Society for the use of its hall, to Professor Stone for the able manner in which he presided, to Mr. Youell for his most interesting essay, and to the Society of American Florists for its kind invitation. The meeting was enlivened by spirited but friendly discussion, in which the following took part: Arthur Cowee, Berlin, N. Y.; Arthur Boddington, New York; Montague Chamberlain, Boston; Maurice Fuld, Boston; J. K. Alexander, East Bridgewater, Mass.; Robt. Cameron of the Harvard Botanic Gardens; Eugene Fisher, Jamaica Plain, Mass.; I. S. Hendrickson, Floral Park, N. Y.; Prof. L. B. Judson of Cornell University; Carl Cropp, Chicago, and L. Merton Gage, Orange, Mass. The following officers were elected to serve for one year:

I. S. Hendrickson, Floral Park, N. Y., president.

E. H. Cushman, Sylvania, O., vice president.

Maurice Fuld, Boston, Mass., treasurer.

L. Merton Gage, Orange, Mass., corresponding secretary.

H. Youell, Syracuse, N. Y., financial secretary.

Executive Committee—Arthur Boddington, New York; Arthur Kirby, New York; J. K. Alexander, East Bridgewater, Mass.

Committee on Nomenclature—Arthur Cowee, Berlin, N. Y.; Prof. L. B. Judson, Cornell University, Ithaca, N. Y.; Leonard Joerg, Floral Park, N. Y.

L. MERTON GAGE.

Orange, Mass., May 30, 1910.

## Meetings Next Week.

**Buffalo, N. Y., June 7, 8 p. m.**—Buffalo Florists' Club, 385-387 Ellicott street.

**Butte, Mont., June 10.**—Montana Florists' Club, Columbia Gardens.

### Chicago.

#### A FINE MEMORIAL DAY BUSINESS.

The business for the past week broke all records for indoor grown flowers. The weather has been unusually cool and suitable for producing good stock while the shrubbery and outdoor flowers generally were not nearly as good, all this tending to make trade much better than usual in the greenhouse-grown product. As is usual for Memorial day, long stemmed American Beauty roses were not in particularly good demand. A cheaper grade of flowers suitable for made up designs and for placing on graves is what is needed and there was a general clean up along the lines of short and medium stemmed roses, carnations and other flowers. All through the latter part of the week shipping orders were plentiful and the prices were well maintained right through to Monday. There was, however, a break in carnations, many growers having held back on these and sent them in late expecting to reap a big harvest on account of high prices, which did not materialize. Peonies

were decidedly short judging from the standard of previous years, though there were large numbers of excellent flowers on hand. One noted house sold out clean on Monday and had not a peony left of any sort or kind. Gladioli helped out finely, the long-stemmed light pink and dark red varieties being good property. There were at times fears of a shortage in roses but they proved unfounded, for while there was no great supply and all grades sold out well, yet there was no scarcity at the prices. The summer crops of Kaiserin, Mrs. Field and others joined hands, so to speak, with the winter varieties, while the evergreen Killarney and White Killarney were on hand in great numbers. My Maryland and Mrs. Jardine, too, are quite acquisitions for this season, both giving a good account of themselves.

Carnations never were better surely for Memorial day than this year. The fine color of Enchantress has been freely remarked upon and the flowers are quite different to the faded, washed-out looking stock sometimes seen at this date when the sun has got his full work in on the fleeting

though beautiful tints of this popular kind. Reds too have been elegant, Victory, O. P. Bassett and Beacon holding up well. White was a little scarcer than colored. Orchids have been plentiful with a fair demand for the best stock. Cape jasmines have been shown plentifully, but a great many have been of very poor quality and arrive bruised. The double white narcissi have proven very popular and little wonder, for one can hardly imagine a finer flower for this season at a moderate price. Snowballs and other shrub flowers have not been nearly as good as usual. German irises are plentiful, this hardy subject having stood the inclement weather well. Green goods are rather scarce. Boxwood is practically out of the market. Hardy ferns from storage are becoming poorer each week and the few new ones that have arrived are soft as yet. Shipments of better stock are expected daily. Heavy well grown smilax is good property and there is none too much of it about. Adiantum is plentiful and good and there is a fair supply of Asparagus plumosus and A. Sprengerii.

#### NOTES.

As evidence of the excellent quality of the carnations now being sent in to Peter Reinberg's wholesale store it may be noted that an out-of-town retailer after ordering 5,000 and receiving them, immediately wired back to duplicate his order, so well pleased was he with the high quality and careful packing. T. Matchem is to be congratulated on the excellent way he handled the immense business here for Memorial day. Everybody was kept busy with the numerous large shipments and everything was kept in line, there being no confusion but all working smoothly and satisfactorily, while the above speaks for the quality of the packing. Big cuts of all the best roses are in progress.

The quality of the stock now arriving at the Poehlmann Bros. Co. is extra fine. A big business was done here for Memorial day, running away over that for any previous holiday. Among the offerings noted this week as especially good are Killarney, White Killarney, Richmond and My Maryland roses with long stems and some magnificent Cattleya Mossiae. The stock at the greenhouses is in first class order now and all the orchids shown are home grown. High class flowers, of the kinds needed for the best class of weddings and other decorations, will be plentiful here from now on.

Vaughan & Sperry are to be congratulated on having the biggest business in the career of the firm. Fred Sperry noted with satisfaction that they have had a long continued run of excellent business, beginning with a record breaking Christmas, following this up at Easter and culminating in the finest Memorial day on record. Everything sold out clean and the store had to be closed early on Mon-

"The Busiest House in Chicago"

## AFTER THE BATTLE

While we sold an immense amount of stock for the Memorial Day business we are each day receiving the finest stock coming into this market. For

### JUNE WEDDINGS

We particularly call attention to our BRIDES, Maids, Killarney and other Roses. We can supply your wants on short notice.

## J. B. DEAMUD CO.

51-53 Wabash Ave.,

CHICAGO

day. Owing to the character of the day Beauties in the longer stemmed grades were slower sellers than the majority of other stocks.

The J. B. Deamud Co. reports a bigger and better business than ever for Memorial day. The great supply of peonies on hand here a day or two before was all sold out and all other classes of stock was in good demand. Notwithstanding the immense number of double white narcissus that were consigned to this firm they proved such an elegant drawing card that many orders had to be cut down on and Mr. Deamud calculates they could have sold another 50,000 had they been at command.

When asked as to Memorial day business, N. Pleser at Kennicott Bros., simply pointed to the empty counters and icebox. Two small bunches of peonies were all that were left of the great stock of these flowers handled while the demand for all other classes of stock was quite unprecedented in the history of the firm.

Fred Strail, of Strail & Hahn, expressed himself as well satisfied with the amount of business done at the new store on Jackson boulevard. The passing trade is good here and there is considerable demand from the Wellington hotel. The icebox is not yet in but is expected in a few days.

Canger & Gormley report a very busy week and big demand for Memorial day. They have several good wedding orders in already for early in the month. They also had their usual order for decorating the graves of the Pinkerton detectives on Memorial day.

Zech & Mann report an excellent Memorial day business, having sold out of peonies entirely though an extra large stock was handled. Carnations, roses and other stock is in first rate condition here and the demand is keeping up well.

The Chicago Rose Co. has moved from 56 Wabash avenue to the basement of No. 60.

The above prices are for select stock. Extra select or inferior stock billed accordingly.  
All other stock at lowest market rates.

## BUY OF THE GROWER

The Geo. Wittbold Co. has issued a most attractive booklet, the cover printed in colors, and containing numerous fine half tones of garden scenes and flower beds. The Memorial day trade here was a record breaker both at the retail department and in plants. The front of the store on Buckingham place that was parked some time ago is profusely decorated now with geraniums and large bay and box trees, an example other florists might copy with advantage.

Summer Kaiserin roses have long been a specialty with Bassett & Washburn, and this season they are particularly fortunate in having a magnificent crop in for June weddings, for which they are especially useful. The flowers are of fine substance and the foliage good, and they come in all lengths. The rose crop all around is good here, the cool weather just suiting all varieties.

During the past winter F. Fuhrman, 3166 N. Clark street, has built a large store and 16 flats. One-half of the store he uses in the retail business and the other is occupied for banking purposes. Mr. Fuhrman also mentioned that he may open up a place on Evanston avenue in the near future.

J. A. Budlong's roses continue to arrive in first class shape, Kaiserin and Field being especially good. Phil Schupp says that in his experience with the firm he was never better equipped to take care of out-of-town trade for June weddings and school exercises.

John Junius, 1736 Byron street, has been on hand with a number of his choice plants at the St. Boniface cemetery, N. Clark street. He is well pleased with the way business has been and states that he has turned out a great number of funeral designs.

Among the stock at Wietor Bros. this week, the roses stand out prominently, elegant Mrs. Jardine, Kaiserin and other varieties being in large supply and of exceptional quality. A fine business was reported here for Memorial day.

John Mangel reports a record-breaking business. His store has been finely decorated with American flags. Magnolia wreaths with ribbons

have proved to be great sellers, the large number prepared having been sold out.

Two new greenhouses, 20x250 feet each, are being erected at the John Assa place, 5350 Bowmanville avenue. Mr. Assa stated that work would commence on two additional greenhouses as soon as those being built are completed.

Congratulations are in order at the home of Leonard Vaughan, Mrs. Vaughan having presented him with a son on June 1. This is the third child, the eldest also being a son. Mother and son are both doing well.

A. Malchow, 3743-45 N. Clark street, found a very ready sale for his hydrangeas, having closed out his entire stock. Carnations were a favorite over other cut flowers, there still being a steady demand.

Adam Heim, of Adam Heim & Son Support Co., Connerville, Ind., was in the city last week. He has put up 54,300 of his supports at Poehlmann Bros. Co., Morton Grove. He left for home on Saturday.

The steamer on which O. F. Bassett and wife sailed for Europe was reported to have her load of cotton on fire the night before sailing date. They may make it warm for Mr. Bassett.

Kroeschell Bros. Co. says that orders for boilers are coming so thick and fast that they have beaten all previous records. Hot water boilers of large capacity are most in demand.

J. F. Czarneck and M. F. Dziadul opened up their new retail store on May 15. They are doing business at 1514 W. Chicago avenue, under the firm name of J. F. Czarneck & Co.

John Paulus reports business very good, he having opened up a temporary branch at 3954 N. Clark street. The place is in charge of his son Arthur.

As evidence of the increasing business at Hoerber Bros., additional help has become necessary, Charlie Endriss being the latest addition to the staff.

J. J. Welsh, Jr., has opened up a stand for the summer on a vacant lot near the St. Boniface cemetery. His stock consists mostly of plants.

J. T. Helbok, 941 Wrightwood avenue, intends to visit his old home in

Italy, the present summer. He will either sell or lease his place.

Paul Blome & Co., 1361 N. Clark street, are very busy cleaning up. The cold weather has proved to be a great setback for them.

Visitor: C. F. Rice of Rice Bros., Minneapolis, Minn.

### St. Louis.

#### HIGH PRICES.

The weather during the past week has become warmer. We now have a glimpse of the sun, but the nights are cool. Stock on Friday, Saturday and Sunday was very scarce and prices climbed to those in vogue around Christmas. The trouble was that the quality of the flowers did not in many instances warrant the price. Boston Market carnations that a few days previous were hard to move at \$1 per 100 were sold at \$4. Whether this rise is a wise method is a question. There is one thing certain that the public will not understand such fluctuations, in inferior stock especially. Of course the scarcity of outdoor flowers had something to do with it, but extremes do not help or encourage the general trade. One prominent retailer expressed himself strongly and stated that he preferred to advise his customers his inability to give them value for prices demanded. Carnations were sold at six cents which would have been high at three cents. Peonies were all taken up at eight cents. Closing exercises, June weddings and a few social events will help to keep up prices although a certain and decided decline will in all probability show itself before the close of the week.

#### NOTES.

The Florists' Club will hold its regular monthly meeting June 9. President Windler desires a full attendance; several important matters were laid over from last meeting owing to the fact that many members were unable to attend owing to the planting out business. The report of the trustees on location and date of annual picnic will be passed upon.

Spaces 7x15 near the greenhouses at Forest park will be allotted to school boys by the public recreation commission to farm and raise vegetables.

# FOR JUNE WEDDINGS

—AND—  
Commencements

Our stocks are in the finest possible condition for the season.  
Carnations and Long-stemmed Beauties are especially good.

## FLOWERS FOR JUNE WEDDINGS AND SCHOOL COMMENCEMENTS.

To those customers who have been using our flowers right along we need only say that our stock was never in better condition than at present. A word to the wise is sufficient.

To those who are not among our regular customers, we wish to say that there are no better flowers reaching this or any other market than those we are now receiving from our mammoth greenhouse plant.

**Beauties**, long stemmed, medium and short for all purposes. **My Maryland**, **Killarney**, **White Killarney** and **Richmond** roses are especially good and we have extra long stems, 40-inch, fine for graduation bouquets. **Carnations** in all leading varieties. Plenty of fine colored **Enchantress**, **Winsor** and **Lawson**.

Home-grown **Orchids** (Cattleyas) a specialty, **C. Mossiae** and **C. Gigas** are in full cut and the flowers are especially good. **Greens** of all kinds. **Adiantum** and **Asparagus**.

**POELHMANN BROS. CO.** OFFICE AND SALESROOM:  
33-35-37 RANDOLPH STREET. **Chicago,**  
LONG DISTANCE PHONE, RANDOLPH 35.

The commission will also furnish tools and seed and provide an expert farmer to direct operations.

The Retail Florists' Protective Association will hold an important meeting June 6 at the Knights of Columbus hall. F. C. Weber, Jr., the secretary, has advised all members to be present.

The Paris Floral Co., 605 Olive street, under the management of F. J. Foster, opened up Saturday. Their full fixtures are not yet completed. Miss May Burns, formerly with Alex Siegel, is saleslady.

The first yellow chrysanthemums of the season were seen at Angermueller's the past week. The blooms were fairly good size and on 2-foot stems.

Ostertag Bros. were very busy all week at the electric display show at the Coliseum. Beds of tulips and other flowers were used in large quantities with electric effects.

W. H. Smith Wholesale Floral Co. received an order for several thousand lavender sweet peas for the Ayres Floral Co.

H. G. Berning is getting a fine supply of everything. Some very fancy

Cape jasmines brought fancy prices Saturday.

John Barnard, formerly with Grimm & Gorly, is now with the Bentzen Floral Co. and is doing good work.

J. Krug and daughter of Alton, Ill., were in town Sunday hunting up stock in all varieties.

W. J. and M. S. Vesey were in with consignments of Harrisii lilies.

W. F.

WELLSVILLE, N. Y.—Mrs. Jennie McEwen has purchased the greenhouse on West State street, formerly owned by W. F. Yewdall.

WASHINGTON, D. C.—During a fierce storm which occurred here May 20, the American Rose Co. had three houses blown down. The damage to the buildings and stock amounted to at least \$2,000.

DALLAS, TEX., May 23.—D. H. R. Green, son of Mrs. Hetty Green, will take up his residence in the east to assist his mother in her financial affairs. Announcement was made to this effect here today.—N. Y. Commercial.

### Nashville.

The Nashville Art club conceived the idea of having a flower show along art lines, which will give an impetus to fine flower-growing by amateurs. The show was given at the Parthenon building in the beautiful Centennial park, which is ample enough to permit of a good arrangement of the flowers. The plants from the Central hospital for the insane, a state institution, were brought. They have a very fine variety and a large collection. The Joy Floral Co. made an exhibit and took a great deal of interest in the show. They kept on exhibition several beautifully decorated bridal tables, renewing them throughout the week, as needed. One of these tables was decorated entirely in sweet peas, all white, with maidenhair and asparagus; another was in roses and still another in carnations. They were awarded a blue ribbon for the largest and handsomest collection of plants and cut flowers. McIntyre Bros. were awarded the blue ribbon for formal gardens, the Central hospital for best collection of plants and orchids; Lischey Nurseries for handsomest collection of palms.

# VAUGHAN & SPERRY

LONG DISTANCE PHONE  
CENTRAL 2571.

52-54 Wabash Ave., CHICAGO.

The beautiful old-fashioned gardens around the city furnished a wealth of rich blossom. Seldom has there been exhibited a larger or more beautiful collection of cut peonies. Mrs. E. W. Cole, Mrs. Van Leer Kirkman, Mrs. Alex. Caldwell, Mrs. Jas. E. Caldwell, Mrs. Jesse M. Overton, Mrs. Jas. Bradford, Mrs. Judge Matthews, and many others, sent in cut flowers from their gardens, the peonies predominating, and making a superb collection, beautifully and artistically arranged.

Some months ago prizes were offered for the best school garden, and for the best individual garden among the pupils. Mrs. Alex. Caldwell, who is herself a successful flower grower, as chairman of the Outdoors committee, visited over 150 gardens, and found some very creditable work. The Lipscomb school won first prize for the best school garden, the Peter Henderson prize of \$3.50 in flowers. The Wilkinson-Elliott prize of \$2.50 in flowers was won by the Trimble school. Four children won prizes, and on account of good gardens 13 other young amateur gardeners were given baskets of iris plants as rewards. The show was made attractive in every way, with musical programmes and lectures. The famous jubilee singers gave a concert Sunday afternoon when there was a large crowd present. Prof. John Davey, of Kent, O., gave his famous lecture on tree-surgery.

The florists have been very busy with the annual school commencements and flowers have been abundant for all purposes. The gladioli and hydrangeas are particularly fine just now, and all kinds of summer flowers are coming in nicely. The excess of rain has caused a vigorous growth on outdoor stock, which if it does not get too dry now will do well through the season. American Beauty, Killarney and Richmond roses are in fine condition, which will hold up until the summer dull season comes on. Carnations are still plentiful and of very good quality.

The Housekeepers' club has inaugurated a flower day, Friday of each week. The members contribute the flowers and they are distributed to the sick and shut-ins. They also gave out

flower seed and have offered prizes for good gardens, and good special plants, and for best appearing yards and gardens.

M. C. D.

### Providence.

Notwithstanding the warm month we had previous to the very undesirable weather during that month, the decreased death rate and very little outdoor stock for Memorial day business, it was the most satisfactory month's business the retailer and grower of all kinds of cutflowers and plants have had in the past quarter of a century. The sale of bedding plants was somewhat held back by the weather the first part of the month, but they moved with great speed the past 10 days, which made up for that. Memorial day coming on Monday has a great tendency to cause more business, as it gives the public three days to do its buying.

Memorial day's business was very gratifying to all; all kinds of cutflowers and plants sold well and at most satisfactory prices. The weather for the week was very threatening all the time up to Sunday, when we had a good clear warm day. There seemed to be plenty of stock to go around at good prices. Stocks were very much sought by the retailer, as they sell well. Spirea Japonica of the different varieties were very much looked for in the making up of bouquets and designs. Sweet peas sold well. Bedding plants in pots or pans sold remarkably well and at good prices. There was plenty of indoor flowers to go around but hardy flowers were scarce.

### NOTES.

The leading daily paper here made an appeal to the public to donate trees to be planted next fall on such streets as they are most needed. Of these streets and squares there are a great many. It is hard to believe how an up-to-date New England city like this, with 200,000 population, could be in such a neglected state. The public has responded most generously and has given \$4,500 so far. Anyone who desires to give a tree send \$3 to the Providence Journal with their name

and address. These names are published. A committee consisting of the mayor, Henry Fletcher, City Forester Alex. Johnson, and Prof. Joseph MacDonnell, of Brown University, are to select the location that they are most needed in.

The monthly meeting of the Florists' and Gardeners' Club of Rhode Island was held at its rooms on the evening of May 23, with a good attendance. President Robert Johnston was in the chair. It was voted to make a visit to the Rhode Island Agricultural College at Kingston in June, the date to be decided on later, and a committee was appointed to make the necessary arrangements. The entertainment committee had no regular programme for the evening, so a general discussion followed about the condition of the business, prices for the coming week and Memorial day. At the close of the business meeting those present were served with fruit, through the kindness of the former president, James Hockey.

T. Jenkins is now in charge of The Breakers, the Newport estate of Mrs. Cornelius Vanderbilt. He recently resigned as gardener for Col. Payne at Thomasville, Ga.

Mathew McNair reports a very good business for May, as well as at Memorial day. This firm has three handsome delivery wagons going.

Laurence Hay, East Providence, is doing a rushing business in bedding and vegetable plants. He had over 200,000 before Memorial day.

Dan. A. Clark, of Red Oak Nurseries, Fiskville, N. Y., sold several hundred pot plants to the trade for Memorial day's business.

E. R. Seymore, Warren, reports business exceptionally good this spring, especially in funeral work and bedding plants.

James B. Canning had an extraordinary good business Memorial day, both in cut flowers and bedding plants.

J. BRINTON.

PLATTSBURGH, N. Y.—Louis Ferber, landscape gardener of the Delaware & Hudson Railroad Co., is laying out the grounds about the depot.

### Kentia Seeds.

At the recent meeting of the Australian Nursery Association a warm discussion took place on the recent rise in prices of kentia seeds. Mr. Cheeseman moved—"That this conference expresses dissatisfaction with the arrangement made by the New South Wales state officials for the distribution of palm seeds from Lord Howe island, whereby authority has been given to leaseholders and contractors to combine together to raise the price of seeds and control the output generally, which combine has raised the prices of seeds 650 per cent over the prices ruling before the combine was initiated."

He stated that at one time the price was 8 shillings to 10 shillings a bushel, but now it has gone up to nearly £3, a rise of 650 per cent and that most of the extra profit went to the company which controlled the output, and not to the islanders generally. On

Some firms have especially good roses which are billed at rather higher prices than the above.

the other hand, it was argued that before the trade was organized and controlled, the islanders were at the mercy of buyers who paid starvation prices, so that, though Lord Howe's island had a monopoly of the supply, the inhabitants were reaping miserable returns for their labors. The motion was finally passed and a deputation appointed to wait upon the minister responsible for the government of the island.—Horticultural Advertiser.

### Destroying Grasshoppers.

ED. AMERICAN FLORIST:—

The gardeners and nurserymen are having the fight of their lives with the grasshoppers. This spring being exceptionally warm, all our hardy stock is a month ahead of the season, and as we have to forward all our early stock under glass, they have invaded the cold frames. We have tried poisoned bran, but with little effect. They are taking the first setting of cabbage and cauliflower, lettuce and cucumbers in the field. If you have any remedy that might help us save the crop we would be more than pleased to hear from you.

J. H.

Montana.

The most practical method of which we have any knowledge for the destruction of grasshoppers is by the use of poisoned baits. Very large level areas can be gone over with the hopperdozer, a pan of sheet iron with water in it and oil floated on top, but this is only suitable for these level areas. What has come to be known as the Criddle mixture is giving most satisfactory results on the ranches of both the United States and Canada. The mixture is composed of half a barrel of fresh horse droppings in which is mixed one pound each of salt and Paris green. If the horse droppings are not fresh the salt is dissolved in water and mixed with the manure and poison. When this mixture is scattered freely about where the grasshoppers are abundant they seem to be attracted to it, for they devour it readily and are poisoned thereby. Dr. James Fletcher, entomologist for the Dominion of Canada, cites an instance where this mixture

#### AN AVERAGE BUSINESS.

The past week is much the same in point of business as was the same period of the past year or two. There was probably more business as there is unquestionably a greater quantity of flowers to be handled and conditions as to surplus seems about the same. The quality of the stock is excellent in all lines; the sweet peas which were having a washed out appearance are now seen in all the splendor of new crop from outside vines and are one of the best sellers. My Maryland rose appears to have a shade on Killarney at present, the flowers having more body and being preferred on this account. Carnations are still fine and notwithstanding the extra demand from out-of-town points there were plenty for the home consumption at a very small increase in price. Peonies have had their inning the past week. They were never in better form. The weather conditions, cool and with an abundance of rain, brought the crop along gradually. Quite a number have been put into the cool rooms, but the June weddings will bring them out, one of the large commission houses saying that they had orders for the first 10 days of June that would clean up their stock nicely. American Beauties have been selling very well, but the last week's shipments are showing the effects of the winter's campaign and there is a distinct falling off in quality. Valley and Easter lilies are seen in quantities for all demands, and these flowers are an important factor, as is evidenced in the hurry and scurry for them when the shipments happen to be light.

#### NOTES.

Wm. K. Harris turned over his usual fine lot of Crimson Ramblers the past two weeks. They do things with system here. As soon as the Easter crops were out of the way, or as room was made at Easter, the men between times of loading the wagons were kept busy bringing ramblers in from frames where they had been wintered, so that not a day was lost, and the result was a splendid lot of well flowered stock that was all cleaned up to the last pot

The retail end of the Memorial day business cannot be said to be on the increase in this city; there is certainly not the general demand, locally, there was 10 years ago. The central city stores were not at all rushed and the comment was frequently heard that the flower demand, on account of the observance of the day, had dwindled to very small proportions.

The Leo Niessen Co. had a fine Memorial day business. "We had lots of everything," said Mr. Niessen, "being especially strong on peonies and carnations, and we found lots of demand for them and all lines of stock."

H. Bayersdorfer Co. say this was the best Memorial day business they have ever had. Metal wreaths were handled in large quantities, as were the bronze and green magnolias.

Ed. Reid said he never handled so many peonies, carnations and sweet peas as at this time, and thinks the future of the flower business is very bright.

Alfred Campbell is first in with a fringed double white petunia that is especially fine for funeral work. It comes from his Collingdale nursery.

At McKissick's they had a fine clean up and were very well pleased with the trade.

K.

### Kansas City.

As usual at this time of the year there has been a scarcity of stock. The market was entirely cleaned up on carnations, roses and all bulb stock. Peonies, alone, remained in any kind of a supply. This year's business for Memorial day was the heaviest in years. If it had not been for the rain which commenced about 10 o'clock Monday morning there would have been a greater amount of business done.

#### NOTES.

The window of the Rock Floral Co. has been very artistically decorated for the past few weeks. They certainly have an expert for that work.

Sam Murray reports that he had an exceptionally good business for Memorial day commencing Friday and lasting until late Monday.

We hear that the Alpha Floral Co. has ordered another automobile to help take care of the ever-growing business.

The rain last week was the heaviest on record. Something like five inches fell in one day.

The Geo. M. Kellogg Flower & Plant Co. sold nearly all of the 25,000 peonies which were stored for Memorial day.

A. F. Barbee says that his coolers were completely emptied on May 30.

MISSOURI.

RICHMOND, VA.—Ratliffe & Tanner are building a fine new store at their old location, 25 Broad street, and are located temporarily in a store next to the Taylor Co.

MINNEAPOLIS, MINN.—Frank Hayes, because he was discharged, it is alleged, entered the greenhouses of his former employers, Will Bros., May 18, and destroyed 25,000 carnation buds. A warrant has been sworn out for his arrest.

## New York.

### MEMORIAL DAY TRADE FAIR.

In the principal retail stores of this city Memorial day trade does not reach large proportions. As a rule, it is the retailers who are located near such great cemeteries as Greenwood and Woodlawn who reap the reward. In proportion to population this city does not have as good business for that day as Boston, Philadelphia, Washington and other cities. The reason is not hard to find. Many of the wealthy native-born people, who, if they were here, would be likely to show reverence for the soldier dead, are in Europe, or at pleasure-seeking resorts. Again, there is here a great foreign population that cannot be expected to take an interest in the things of which they know but little. While the past week was very dull up to Friday, it then took a turn for the better, Saturday being a good day. As previously outlined, if we cannot consume all our stock we are ready to dispose of it to our neighbors at reasonable figures. A large number of carnations were shipped to Boston and other points for the Memorial day business. The arrivals of roses are heavy and prices are rather low. Good sweet peas sell well, touching \$1.50 to \$2 per dozen bunches for the best. Retailers say that there is a tendency to increase wholesale prices that is not warranted, according to the volume of stock arriving, but that is an old story. The unusually warm weather of this spring brought in a large amount of inferior stock which necessarily sold cheap.

May 30.—Business in the morning hours was very quiet. There was an abundance of stock, but flowers were not above the ordinary. It is said that special American Beauty roses could not be bought on Saturday, May 28, for 30 cents each. However, conditions have changed and they are now going at 15 cents each. Had it not been for the great amount of stock that was shipped out to other cities, Memorial day business would have been a frost.

### NOTES.

John Kent Zee, a young gardener employed by Tappen Fairchild of Sedgwick avenue, the Bronx, arose from dinner in the kitchen of the Fairchild place a few nights ago, after a tiff with one of the maids and walked toward the stairs leading into the cellar. At the top of the stairway he drew a revolver from his pocket, and before the frightened girl or the butler and his wife could stop him he put the weapon to his temple and pulled the trigger. He fell dead into the

WHOLESALE

### ANNOUNCEMENT.

We beg to announce that on and after July 1, 1910, the premises on the first floor of the Coogan Bldg. will be under the management of **A. Moltz & Company, who will sell at wholesale only, all flowers in season in addition to roses.**

A. Moltz

Maurice L. Glass.

**A. MOLTZ & COMPANY, Wholesale Florists,**

Tel. 2921 Madison Sq. Open from 5 a. m. to 6 p. m. Coogan Bldg., 55-57 W. 26th St., New York.

cellar. The gardener had been an admirer of the girl since she had been employed by the Fairchilds, and she had not accepted his attentions.

John I. Raynor, who for many years has been a noteworthy and interesting personality in the wholesale district, will retire from business on June 6. He has always been an active man in the street and his word has always been as good as his bond. He has always been noted for his candor and fair dealing. He leaves the wholesale district with a clean and honorable record, and wherever, in the future, his lot may be cast, the good wishes of a host of friends will go with him. S. P. J. Smith for years foreman for Mr. Raynor will continue the business.

Philip Kessler, who for a number of years has conducted a very successful wholesale business on the second floor of the Coogan building, Sixth avenue and Twenty-sixth street, will re-

move, about July 1, to the third floor of the same building, where he has secured ample and convenient quarters for his largely increasing business.

Philip Kessler, who for a number of years has conducted a very successful cut flower business on the second floor of the Coogan building, Twenty-sixth street and Sixth avenue, will, about July 1, remove to the third floor of the same building, where he has secured more commodious quarters.

Elsewhere will be noted the announcement of A. Moltz & Co. Both members of this firm have had long experience in the wholesale business and thoroughly understand it. In enlarging their sphere they will have the good wishes of many in the trade.

Henshaw & Fenrich had a fine Memorial day business. They disposed of an enormous quantity of all seasonable stocks, notably carnations.

The word "fair" applies very well to the floral business at present, but stock is rather scarce. Funeral work and an occasional decoration constitutes the bulk of the business. Nearly all the outdoor stock has disappeared, so we have to depend entirely at present upon greenhouse stock. Carnations are scarce and in many instances of inferior quality. Good indoor sweet peas are obtainable, but in small quantities. Roses are in about the same supply they have been all winter, with little or no reduction in the price. Beauties and orchids are seen in the retailers' windows only once in a while. A liberal supply of lily of the valley is at hand at the

TRADE FAIR.

During the early part of last week, business was light, a condition that always precedes a great holiday. Toward the last of the week it picked up and the prospects for a great Memorial day trade were very encouraging. There was no prospect of a shortage of stock, though there was complaint regarding the quality of much that arrived, nevertheless good stock was easily found. Roses were plentiful and, up to the end of the week, there was no evidence of a scarcity of carnations. A feature of the market was a good stock of sweet peas, gladioli, cut spirea, stocks and other seasonable flowers. The outdoor lily of the valley ran a fair race with the indoor product. There were plenty of orchids, the best ones being seen at Horticultural Hall. In this connection it may be stated that there was much dissatisfaction among the commercial men regarding the date of the show being fixed so near to Memorial day. The general opinion was that it could have as well been held a week earlier or a week later. As it was, they say, it was impossible for them to leave their business.

May 28.—The market was very lively this morning and an immense amount of stock was quickly disposed of. Roses were more plentiful than carnations, but all good stock sold well, roses running from two to ten cents, carnations from four to six, with a corresponding advance in other good stocks.

**NOTES.**

Hoffman's fast automobile is now kept busy with deliveries for his two Boston stores and trips to his Cambridge place. His new store, opened about two months ago at 18 State street, is prosperous, while his store at 61 Massachusetts avenue, continues to be a busy mart of trade. His store and greenhouses at Cambridge, opposite Mt. Auburn cemetery, do a good business and the glass area will be enlarged this summer.

Edward MacMulkin had a nice exhibit of flowering and foliage plants at the orchid show and was awarded a silver medal. A silver medal was also awarded Wm. Sim, the well known violet and sweet pea specialist, for his sweet peas.

L. Smith of Tewksbury, who in the past has been noted for his violets, now brings in good carnation stock.

In the Boston Co-operative Market, business was enlivened by orchestral music and everybody stepped lively.

W. H. Elliott had 250,000 roses for the Memorial day trade.

BALTIMORE, MD.—Chas. H. Cook is having four houses built on his property on Old Frederick road at Catonsville.

LEBANON, IND.—The demand for flowers here has been unprecedented, two greenhouse establishments being unable to supply the local demand. A few more days in the year like Mother's day and the greenhouses would be stripped continually.

CLARKSBURG, W. VA.—The secretary of state has issued a state charter to the Greenhouse Company of Clarksburg to operate greenhouses. Capital stock, \$25,000. The incorporators are: N. J. Hayman, C. C. Jarvis, C. H. Griffin, I. J. Coston of this city, and John C. Johnson of Bridgeport.

P. L. Carbone has just returned from a business trip to Montreal and is much gratified with the favors shown his artistic store and lawn vases. In a short time he will sail for Europe for a vacation of two months.

Everybody was busy and among the dealers the orchid exhibition was practically forgotten. At Galvin's it was said that though they would have been pleased to attend, their work kept them busy till 11 p. m.

Welch Bros. handled an immense amount of stock. Their facilities for the care and rapid handling of good stock are unequaled and they make the best of their opportunities.

Wm. Nicholson of Framingham sent in fine carnations and feverfew, which sold fast. The last named is a fine seller at this season.

May 24 was a day long to be remembered for heat and humidity. It brought out flowers, straw hats and much profanity.

Albert Roper of Tewksbury, the originator of Fair Maid and Bay State, brought in about 12,000 carnations of fine quality.

Peirce Bros. of Waltham handled an immense amount of stock, having three heavy automobiles running for delivery.

Geo. E. Blackmer of Hyde Park is bringing in fine sweet peas. In the violet season he also has good single violets.

## New York Notes.

John P. Cleary held a very successful auction of plants on May 31 at the rooms of the Fruit Auction Co., Franklin and Washington streets. A large number of bedding plants were sold, including coleus, salvias and cannas. In addition there were many fine flowering and ornamental plants, including hydrangeas, aspidistras and dracaenas. The prices realized were the best of the season and John P. is to be congratulated for his success as an auctioneer. The aspidistra and dracaena were particularly fine stock.

George Golsner and wife of College Point, sailed for Europe, June 1, on the Hamburg-American liner, President Lincoln. During their absence their son Frank will look after the selling end of the business in the Cut Flower Exchange. John Miesem and wife, of Elmhurst, will be passengers on the same steamer, and it is understood that they will all keep company in a two months' tour of the continent.

Theodore Outerbridge, of Sunnyslands, Bermuda, after visiting the orchid exhibition at Boston, came here for a visit to his brother, who is a resident of this city. Mr. Outerbridge is an extensive grower of lily bulbs and is well known in the trade.

Special American Beauty roses went up to 30 cents on May 28, but it was merely spasmodic, as they dropped again on Memorial day to old figures. It is estimated that 150,000 carnations were shipped from here to Boston for Memorial day business.

Kessler Bros., the well known plantmen, have removed from 50 West Twenty-eight street to 450 Sixth avenue, just around the corner. Like other Twenty-eighth street dealers, they had to move on account of the building coming down.

The warm weather has greatly increased the sale of bedding stock, as it is now considered safe to plant. The roof gardens are now opening up for business, which is creating a better movement in palms and other foliage plants.

The proposition for a plant market under the Manhattan approach to the Queensborough bridge is either in a trance or dead.

The New York Cut Flower Co. is now handling a splendid line of peonies, from the Cottage Gardens, Queens.

Mrs. Chas. Schneider, of Woodside, is sending in very fine Ulrich Brunner roses. The best sell for 15 cents.

Hugh Nelson is rejoicing over a visit which the stork recently made to his home. Boy, 15 pounds.

TWO IRISHMEN, bent on robbery, held up a passing Scotchman. After a long, fierce fight, in which the Scotchman almost had the better of it, they succeeded in conquering him. A thorough search of his clothes disclosed one lone five-cent piece. "Troth, Pat," said Mike disgustedly, "If he'd had tin cints instead of a nickel he'd have murdered the two of us!"

Business has been somewhat irregular here this spring owing to so much rain and cold weather. Last week the cold and rain shortened up stock, however, and the supply just about equaled the demand, so things were easy with the retailers and they were not complaining. Plantmen, however, seemed to find complaint, not only from the fact that trade was unusually quiet, but the fact that the first warm days they looked for a grand rush among their plant customers, each one wanting their orders for bedding plants and window boxes filled at once. Carnations are in good demand and retail for 50 cents to \$1 per dozen. Roses are of fairly good quality and retail for \$1.25 to \$1.50 per dozen. Sweet peas are not abundant at present, but will be in good supply in a few weeks. They retail at \$1 per 100 blooms. Lilies of good quality bring \$2-\$3 per dozen. Gladiolus spikes are coming in of good quality and retail for \$1 per dozen. Bedding stock is good this spring and geraniums are retailing for 50c-\$1.50 per dozen. There are large quantities, also, of other bedding stock. Green goods are rather scarce at present.

## NOTES.

All the boys at the J. E. Keller Estate are very busy now getting out orders for spring stock. They have a good supply this year and everything is in good shape. Theodore Keller, of this firm, is now with the E. G. Hill Co., Richmond, Ind.

The Michler Bros. Co. on Maxwell street have been very busy planting out in the cemeteries and other places. Their stock is all looking well this year.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Durryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland O., Sec'y and Treas., Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J., June 21-23, 1910.

**VISITED CHICAGO:** E. Suhr, Copenhagen, Denmark, on a tour of the United States and Canada.

**WALTER P. STOKES**, Philadelphia, and **S. F. Willard** of Comstock, Ferre & Co., Wethersfield, Conn., sail June 14 on a trip to Europe.

**CHICAGO.**—The stork paid the third visit to the home of Leonard Vaughan on June 1. Mr. Vaughan immediately christened the new arrival Leonard, Jr. Mother and son are doing well.

**LIGHT onion seed** is what some of the Chicago onion set growers say in explaining the poor stand in their fields. Home-grown seed made the poorest showing. Ohio seed second, best Louisville seed next and California grown averaged best of all.

**WASHINGTON, D. C.**—**F. W. Bolgiano & Co.**, recently celebrated the twenty-first anniversary of their senior's starting in business by moving into the new 5-story warehouse, 1009 B street northwest, with a frontage of 32 feet and a depth of 78 feet. The first floor is used for a general salesroom, the second for fertilizers, the third for seeds and the fourth and fifth floors are used for implements and field seeds.

### Connecticut Seed Crops.

**Milford, May 25.**—The Everett B. Clark Seed Co. writes: "Conditions here so far have been favorable. The acreage of our principal crops is about an average; the biennial seed crops have got a nice start, and, for this time of the season, promise well. Sweet corn planting is completed, with seed of fair average strength, and with the conditions we are getting we think it should germinate satisfactorily. Warmer nights would be more favorable to this crop, but in view of the conditions that we have undergone for years past, we feel that it is our duty to bear a smiling countenance in view of present conditions and to hope for immunity from anything worse. A good crop is due us and in our opinion a good

average crop will be the best thing for the seed trade in general, as we have had a succession of years of shortage quite sufficient for the good of the business."

### Long Island Seed Crops.

**Hempstead, May 20.**—But few seed crops are sufficiently advanced to afford any idea of the outcome. Cabbage seed crops are doing well so far and promise an average crop, excepting Danish Ballhead, which does not seem to winter well here. Fields of this have gone back since planting out this spring. Stock from imported seed seems to fare worse than our own, but none we think do as well as American grown acclimated stock, and even that cannot compare with our old reliable sorts of late cabbage, several of which date back a century. So much seed is now grown in California and Europe that seed growers of the United States east of the Rockies cannot compete at the ridiculously low prices.—**F. B.**

### Nebraska Seed Crops.

**Fremont, May 20.**—Seed growers are now busy planting. It is said the acreage of nearly all named varieties of sweet and field corn in Nebraska and western Iowa will be very much smaller than usual owing to lack of choice selected seed stocks, also on account of the many farmers refusing to contract again this year. The same will apply to some vine seeds, especially pumpkin and squash, the acreage of which will be considerably smaller than last year. It is believed the time is fast approaching when it will be necessary to pay much higher prices for sweet and field corn, as well as for vine seeds, to get out sufficient acreage to cover the ordinary requirements of the trade.

**Waterloo, May 21.**—Vine seeds are going into the ground under fairly favorable conditions.

### New York Seed Crops.

**Cambridge, May 21.**—Peas are now practically all in the ground but very few of them are above ground. Growers are encouraged to this extent about the crop of peas—they went into the ground in good shape, the ground is in good condition and they are planted early enough to insure a crop if the weather is not unfavorable later on. A good crop of peas is needed this year for the market is very bare and the demand is exceedingly good. Hardly anything else has been planted.

### Wisconsin Seed Crops.

**Sheboygan, May 20.**—Peas went into the ground in better condition and earlier than usual in many sections. Farther north they were not planted so early, but in a general way the peas went into the ground in as fine condition as experienced growers have ever known and had the best start they have ever had. This was in April, however, and during May the weather has been very unfavorable, cold, with very little rain or sunshine and the crop has not made such progress as might have been expected. It is hard to predict what harm such a condition has brought about; by June 20 we can tell better.

Farmers are making preparations to plant beans earlier than usual and will no doubt commence planting next week in some of the more advanced sections.

### April and May Business.

**A. C. Kendel, Cleveland, O.**, writes: "Our trade lasts so late in June that it is hard to say what the outcome will be. This is true, however: We are practically cleaned out of high priced stocks of all kinds and are having a heavy trade at present in plants, both vegetable and ornamental."

**J. M. Thorburn & Co., New York**, write: "While the nature of our business is such that it varies little from year to year, the past season was even better than former years."

### The Callan Seed Bill Passed.

**Albany, N. Y.**—The Callan seed bill, of which mention has been made from time to time in the columns of the AMERICAN FLORIST, has passed the legislature. It went through under the provisions of an emergency message which acted as a suspension of the rules. The phraseology was modified in places, but the intent and spirit of the bill remain intact. It will now go to Governor Hughes. **R. D.**

### Government Free Seeds.

If this were a country of paupers, ne'er-do-wells, or self-confessed failures, this bounty might in some way be justified, or even be necessary, but the spectacle of our enlightened government annually projecting a miscellaneous lot of common seeds upon an intelligent and prosperous public is ludicrous.

Seeds are sent to large numbers who neither care for nor use them; in other instances they are sent in bulk to political hangers-on to place where "they will do the most good" and are handed out indiscriminately to Tom, Dick and Harry, and, being "free," Tom, Dick and Harry take them on the theory that they can't lose.—**F. D. Coburn** of Kansas Department of Agriculture in Chicago Daily News.

### Imports.

During the week ending May 21, imports were received at New York as follows:

Wadley & Smythe, 8 cases plants.  
McHutchison & Co., 1 case plants.  
J. M. Thorburn & Co., 5 bundles, 1 bag seed.

To others: 1,452 bags seed, 225 cases plants, 155 tubs laurel trees, 39 cases orchids.

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President;  
Franklin DeKleine, Grand Rapids, Mich.,  
Vice-President; S. W. Severance, 508 Illi-  
nois Life Building, Louisville, Ky., Secre-  
tary; M. L. Ruetenik, Cleveland, O., Treas.

### Notes on Tomatoes.

Whether to stake or not to stake tomatoes is a much debated subject. Like a good many others, this one will never be settled to the satisfaction of all. Where it pays one man to stake and sucker part or all of his crop, another would lose money by doing so. This subject is brought to the front again by several experiment station bulletins recently published, condemning as a whole the practice of training or staking. Right here is where so many experiments are misleading; they lack the practical side. By this we mean the ability to take the crop to market and bring home the money.

We find that for the early trade it is absolutely necessary to stake our tomatoes as we cannot sell the product from prostrate vines. It lacks the finish which is so necessary for table fruit. There are other considerations. During rainy spells the trained vine will set fruit where the other will not, and when it comes to picking the crop, we gain all the time and labor lost for staking.

To us it is more a matter how to stake than any other. We have had very good results by transferring the greenhouse system outdoors. This is simply setting stakes about 10 feet apart and stretching a wire over these to which the vertical strings are tied upon which the vines are hoisted. We generally have four plants between the stakes and use American twine flax. We used to stretch a bottom wire, but found it very much in the way for boxing, hence quit it and get along just as well by simply tying the twine loosely to the tomato plants near the ground.

Just as important as any other part of the work is spraying. We believe there is no other factor so important as thorough spraying with Bordeaux outdoors. In the greenhouse it will be necessary to watch the moisture. Tomatoes should not be sprayed or syringed to supply moisture. They do better with dry foliage. The moisture at the roots has a great deal to do with the dreaded black rot. It usually is companion to insufficient water. However, one must not err on the other side—too much water means vine and no fruit. After fruit has set, a mulch of manure is in order to help control moisture and sustain the crop. While tomatoes love heat, there is a time when even that is too extreme and a light shade is beneficial. We generally shade about the last of June. It helps to finish up meaty and well flavored fruit. It generally pays best to sell greenhouse tomatoes in small packages, say peach baskets, and weigh the fruit.

MARKETMAN.

### The Cabbage Maggot.

The cabbage maggot (*Phorbia brassicae*) is one of the most serious insects that growers of this vegetable have to contend with. Young plants, soon after being set out in the spring, are often found to have their roots infested with these maggots, their presence being indicated by the dying of the plants, says a bulletin of the Ontario Department of Agriculture. They are white, footless larvæ, the offspring of slender two-winged flies, smaller than the ordinary house fly; the eggs are laid on the stems of the plants close to or just beneath the surface of the ground; when hatched, the maggots burrow down into the roots, where they tear the tissue with the hooks which take the place of their jaws, and live upon the sap; the breaking up of the cells of the plant causes a rot to set in and the entire destruction of the root soon follows. When full grown the maggots form their reddish brown puparia in the soil near by, and from these a second brood of flies soon emerges. Working under ground as they do, it is a difficult matter to apply any effective remedy; the only one that has proved useful is a decoction of pyrethrum insect powder (quarter of a pound to a gallon of water) or white hellebore of the same strength. The earth is drawn away from the root of an affected plant and half a tea-cupful is poured in; the soil is then replaced and hilled up around the stem.

Preventive measures are less troublesome and usually more effective. One of the best is the screening of newly set-out cabbages and cauliflower with cheese-cloth. Light frames of slats are made eight feet long, two wide and two high; over these is tacked cheesecloth which should reach to the ground on all sides, and be prevented from blowing about by heaping a little earth on the edges. These frames cost very little and can be readily moved when required and stowed away for future use; they should be put on as soon as the plants are set out and left till they are well-grown. The frames not only prevent the flies from laying their eggs on the plants, but also keep off the other insects which are liable to attack them.

### Prices of Indoor Fruits and Vegetables.

New York, May 28.—Mushrooms, 40 cents per pound; cucumbers, 75 cents to \$1 per dozen; lettuce, cold frame, 62½ cents per dozen heads; tomatoes, 17½ cents per pound; grapes, Hambros, \$1.15 per pound; Gros Colman, \$1.50 per pound; Muscats, \$2.50 per pound; peaches, French grown, \$10 per dozen.

Chicago, June 1.—Mushrooms, 40 cents to 50 cents per pound; cucumbers, \$1 to \$1.25 per dozen; leaf lettuce, 22-25 cents per box; head lettuce, Louisiana, \$1.-\$1.25 per hamper; \$6½ barrel (sugar barrel size); radishes 25-30 cents per dozen.

## Success In Market Gardening

REVISED AND ENLARGED EDITION.

A new and larger edition of this well known work on market gardening. It contains everything a market gardener wants to know, and in a form easily understood. It is an invaluable guide to any one in the business from the beginner to the most experienced.

### European Horticulture.

FROM THE FRENCH TRADE PAPERS.

New delphiniums are announced by V. Lemoine & Son, Captain Flegenschuk, broad flowers, mauve, bordered cobalt; Lieutenant Delacourmurve, broad semi-double flowers, center mauve, exterior ash; Lieutenant Vasseur, soft mauve, bordered light blue; Sergeant Beranger, semi-double mauve mixed with light blue, black centers.

A French horticulturist, Professor Bazin, tells us that cut flowers will last five days or so longer in water if, instead of cutting the stems, we crush them for an inch or so and then cut or break them—the increased capillary surface, especially in woody plants, is the explanation. The experiment, at least, is a simple one.

A new hardy aster, *Mesa grande speciosa grandiflora*, is of a brilliant blue violet color, very early; grows 15 to 20 inches high, and blooms from July till frost, retaining its good foliage throughout the summer. The flowers are large, the corollas fine and fringe-like, and the plant very attractive.

The new English tomato, *Invicta*, is one of those fine flavored, medium sized fruits which are equally at home outdoors or under glass. They average five fruits to the pound, very round and smooth and these are carried in immense clusters. It is dwarf and vigorous, bearing from June till frost.

The International Institute of Agriculture of Rome has decided to publish monthly a bulletin of agricultural statistics in French, with German, English, Spanish and Italian editions. The first number appeared in January, 1910.

The largest of all gaillardias, *Mastodox*, of Rivoire & Son, is a beautiful golden yellow color and is expected

to be a great success, as well as their *Primula obconica cœrulea*, said to be a true blue.

*Beaute de Lyon* (*Rosa Perentiana*) is a novelty of M. Pernet-Ducher.—A strong grower with straight and strong branches and bright green foliage, flower large, double, globular, always opening well, a superb coral color, slightly shaded with yellow. Perfectly hardy, it differs from its parent, *Soleil d'Or* by its greater vigor, its flowers being much less double and its petals larger. While remontant, it is hardly free of bloom, but its remarkable coloring assures it a place and a welcome. It is expected to be especially desirable to grow for sale in pots.

*Cornus Bretschneideri*, a new and attractive dogwood, presents special attraction to landscapists in its winter coloring. It is very erect and regular in growth, has the typical long-pointed foliage, bright green above, silvery below and the corymbs of flowers, about three inches in diameter, are white, lightly touched with rose, followed by dark blue berries. Most attractive also in winter are the shoots and branches of light olive green, shaded yellowish or even at times lemon yellow, with reddish tips, standing out well against a wintry background.

The New Rose Deutschland.—A hybrid of *Snow Queen* and *Soleil d'Or* combines the best qualities of both. It is said to surpass all other roses in beauty of foliage, and its young wood, grass green at first, becomes the darkest of all greens. The buds are white when quite small, and as they approach the point of blooming they take on a shading more and more orange—the exterior of the petals is as if shaded with a light wash of rose. It is very vigorous, producing its flowers singly or in clusters of three.

The centennial anniversary of the birth of Louis Van Houtte will be celebrated at Gendbrugge near Ghent June 26, in a series of festivities arranged by a committee of noted Belgian horticulturists. Mr. Van Houtte is hailed as the father of the horticultural industry in Belgium, who, by his public spirit, his eminence in his profession and his personal character exerted a lasting influence, and left a name which is honored throughout the horticultural world.

Hybrid Tea, Grossherzog Friedrich.—Mme. Caroline Testout by Meta. Not so large or long-stemmed as Mme. Testout, but more double, the bud longer and more pointed, the coloring deeper, the yellow-red of Meta shining through the delicate carmine rose. It is free blooming, forces well, has strong, sweet fragrance and is healthy. The flowers develop slowly and last long, 6 to 10 days, cut, without a bluish tinge.

A dwarf green bean which is extremely popular in France is *Sans Rival*, a very long, slender round green bean, which is curiously marked with streaks and marblings of black, which disappear in the process of cooking. It is the result of selection from a favorite market bean shipped from the gardens of the south of France to the Paris market.

The rose department of the National Horticultural Society of France has undertaken the task of making a list of the best roses to grow. Such a work has long been contemplated, and it is to be carried out as rapidly as possible.

*Rose, Marquise de Ganay* (hybrid tea) is a novelty of Mr. P. Guillot, of 1909. Issue of *Liberty* by La France. It resembles the former in its erect

## Boddington's Quality Flower Seeds for Florists

### PRIMULA SEED

QUALITY in PRIMULA SEED is the very essence of success—when in flower you want good sized flowers and good colors; when you buy our seed **YOU GET BOTH.**

Boddington's Matchless Giant Primulas, Mixed, Boddington's Matchless Giant Pure White, Boddington's Matchless Giant Blush White, Boddington's Matchless Giant Rose, Boddington's Matchless Giant Scarlet, Boddington's Matchless Giant Royal Blue  
Above, each, ½ pkt., 60c; pkt., \$1.00.

### PRIMULA OBCONICA GIGANTEA.

*Primula obconica gigantea Kermesina*. Beautiful deep crimson.  
*Primula obconica gigantea alba*. The pure white flowers greatly enhance the beauty of the existing lilac, rose and crimson shades.  
*Primula obconica gigantea lilacina*. Beautiful lilac.  
*Primula obconica gigantea rosea*. Lovely rose.  
*Primula obconica gigantea grandiflora*. Mixed varieties, containing pure white to deep crimson. Each of above, ½ pkt., 30c; pkt., 50c.

*PRIMULA floribunda grandiflora* (Buttercup). Small yellow flowers, borne in great profusion: fine for pots: pkts., 50c. *Forbesi* (Baby Primrose) pkt., 25c.

*PRIMULA KEWENSIS* (Giant Buttercup). This plant is a strong grower, with bright green leaves and numerous erect flower scapes 10 to 18 inches in height, producing flowers in whorls at intervals along the whole length. The flowers are fragrant, bright yellow in color with a slender tube and spreading limb nearly an inch in diameter. As a winter-flowering decorative plant, it is an acquisition; very floriferous when in a small state. ½ trade pkt., 50c; pkt., \$1.00.

### Boddington's Matchless Cineraria

A combination of the three most famous English strains which we can recommend to those wishing to grow the best **Tall**, ½ trade pkt., 60c; trade pkt., \$1.00. **Dwarf**, ½ trade pkt., 60c; trade pkt., \$1.00.

*CINERARIA STELLATA* (Star-flowering Cineraria). Tall-growing, 4 to 5 feet; excellent as a single specimen for table decoration, or for grouping with splendid effect in corridors and conservatories. ½ trade pkt., 60c; trade pkt., \$1.00.

### Calceolaria Hybrida, Boddington's Perfection

Saved by England's most famous specialists. Monster flowers of rich and varied colors, including spotted, laced, blotched and self-colored varieties. ½ pkt., 60c; pkt., \$1.00.

**ASPARAGUS plumosus nanus**, true greenhouse grown, 60c per 100 seeds, \$1.20 for 250 seeds, \$4.00 per 1000 seeds. **Plumosus nanus**, California-grown, 50c per 100 seeds, 75c per 250 seeds, \$2.00 per 1000 seeds. **Sprengeri**, 25c for 250 seeds, 75c per 1000 seeds, \$3.00 for 5000 seeds.

**ARTHUR T. BODDINGTON,** Seedsman, 342 W. 14th St., New York

growth and freedom of bloom, while the flowers resemble those of La France.

PECKVILLE, PA.—W. J. Broad completed his new greenhouse and opened for business Memorial day.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

CHERRY growers in North Michigan report sweet sorts a good crop, sour kinds badly hurt by freeze.

KALISPELL, MO. —The King-Thurston Nursery Co. has filed with the secretary of state notice of the change from the nursery to the realty business and its increase of capital stock from \$10,000 to \$50,000.

THE exports of fruits and nuts from this country to Canada during the 10 months ending April 30, 1910, show an increase of \$306,470 over those of the same 10 months in the previous year, the figures being \$3,942,845 and \$3,636,375.

WE present herewith a fine portrait of President F. H. Stannard, of the American Association of Nurserymen, and again call attention to the convention of this organization which is to be held at Denver, Colo., next week. It promises to be an extra attractive meeting and Denver is a pleasant place to visit at this season, especially in view of the fine entertainment promised by the association and the caliber of those who are scheduled to read papers there.

### The Hollies.

Of our hardy evergreen trees and shrubs that depend for their beauty throughout the year on foliage and fruit rather than flowers, the common holly is undoubtedly the most important. Apart from any other consideration, the holly and its numerous varieties will thrive in almost any soil that is not water-logged, says the Gardener, though a good, well-drained loam is the most suitable. Under favorable conditions they will form large trees, and yet are so patient of the knife that a fine specimen can be easily kept within quite a small garden. Owing to this feature, combined with the dense growth and spiny character of the foliage, the holly is largely used in the formation of hedges, and though it is of rather slow growth compared with some that are treated in this way, a well-kept holly hedge forms a delightful feature and a most effectual bar against intruders. For formal gardens the common holly and its varieties are among the most desirable of subjects as they will remain in good health however much they may be trimmed. An illustration of this is afforded by the dense thimble-shaped specimens at the back of the palm house at Kew, which, though quite old plants and rigidly trimmed every year, are in robust health. Such artificial productions as this, however, appeal only to a limited number, the majority much preferring to see a specimen holly in all its natural beauty. Even without destroying this, a plant by judicious pruning may be kept within reasonable limits.

#### TRANSPLANTING HOLLIES.

These may be successfully moved in the first part of September, but the best time of all the year to transplant them is during the latter part of April and the first half of May. At that season we often get showery weather, which to the hollies that have been

# A BLUE ROSE

## The Greatest Rose Novelty of the Century

*It flowered with us this season and was greatly admired.*

The New Rambler (Violet Blue), hailed by the German rose growers as the forerunner of a genuinely cornflower blue rose, is a seedling of Crimson Rambler, very vigorous and hardy, and free blooming.

F. H. Stannard.

President American Association of Nurserymen.

moved is a great help, as it tends to keep them fresh till the roots recover from the check of removal, which at this season of the year takes but a short time. Even then in planting care should be taken to work the soil well among the roots. This is greatly helped by giving a thorough soaking of water as soon as the hole is filled up, as the soil is thereby consolidated and washed into the minor interstices which may be left. Should the weather be dry, a syringing overhead two or three times a day will be of great service. One syringing should, if possible, be done in the evening, as this gives the plant time to take advantage of the moisture before it is dried up by bright sunshine.

#### TREATMENT OF HEDGES.

While the above particulars as to transplanting refer to specimens, the same will apply as to the time of the year and other matters to the planting of hedges. For this purpose the common holly, raised from seed, gives the best results. Seedlings may be obtained from nurseries in almost all sizes, but for the formation of a hedge, plants

from three to four feet in height are preferable, as if smaller one has to wait long for results, whereas larger plants are expensive. In the case of a newly planted hedge, it should not be clipped at all the first year, although it may be looked over in August and any straggling shoots shortened back with the knife. The second season clipping may be begun, this month being very suitable, as short growths, which relieve the otherwise trimmed-up look, are produced before winter. In planting such a permanent feature as a holly hedge it is essential to do so thoroughly. The ground should be dug to a depth of 2½ feet, and in most soils the incorporation of some well-decayed manure will be helpful. The distance apart at which the plants are to be put will, to a certain extent, depend upon their size; but, generally speaking, for the formation of a hedge the branches should quite touch or, in some instances, interlace with each other.

#### PROPAGATION OF HOLLIES.

The common holly is easily increased by seeds, which, however, lie dormant for at least a year, and generally more, after being gathered. In nurseries they are usually mixed in a heap with sand in the open air, and

turned over occasionally in order to promote decomposition of the pulp. They are then sown during the following spring. The numerous varieties may be propagated either by budding or grafting on to seedling stocks of the common kind. This operation is usually carried out in July or early August.

#### HOLLIES AS BERRY-BEARERS.

Probably the fruitfulness, or otherwise, of the holly has given rise to more discussion than any other point connected with the tree. This is largely owing to the fact that in some cases the flowers are not self-fertilising; that is to say, the male and female flowers are borne on different plants. In this respect the holly is extremely singular, as individuals may be met with in which the flowers are wholly male or wholly female. In others they are hermaphrodite; that is to say, the male and female organs are present in the one flower, thus ensuring self-fertilisation. Singularly enough, examples occur in which different types of flowers are found on the same individual. With the approach of Christmas the popular mind turns to holly berries, and if they are numerous we are told that a hard winter is in prospect, this being looked upon as Nature's extra provision for the birds. This theory is a pretty one, but the fact is that the crop of holly berries depends upon the weather experienced during the flowering season in spring; if it is then dry and favorable to fertilisation, a good crop of berries is ensured. When the holly is regarded from a fruiting standpoint, the yellow-berried (fructo-luteo) must on no account be overlooked, as it is so distinct from any of the others.

Besides the varieties of the common holly, other distinct species are the

Albany, N. Y.

Eyres has received many compliments for his work in connection with the decoration of the assembly chamber on the occasion of the memorial services for Senators John Raines, Patrick H. McCarren and William T. O'Neill, who died during the year. The speaker's desk and adjacent space were decorated with handsome palms and foliage plants. Three entrance arches in the rear of the speaker's desk at the north side of the chamber were filled in with black cloth on which was suspended empire wreaths. Each arch contained the initials of one of the dead senators in purple.

Among the recent visitors was H. A. Barnard, representing Stuart Low & Co., Royal Nurseries, Bush Hill Park, Enfield, Middlesex, England, orchid and carnation specialists. Mr. Barnard called upon F. A. Danker when in the city and said he was on his way to Boston to attend the orchid show there.

The closing days of the legislature were notable for the floral pieces sent to many of the members. Those from New York were especially favored by friends who sent some very handsome pieces.

Elizabeth, N. J.

VETERANS OBJECT TO WAX FLOWERS.

Gen. J. Madison Drake, supervisor of soldiers' and sailors' graves for the board of free holders, is in trouble with the Grand Army men because he substituted wax flowers for natural blooms in decorating the graves of soldiers in Evergreen cemetery. When the veterans reached the cemetery Memorial day and found wax flowers, they were indignant. The imitations were torn up and thrown away. Afterward the veterans held an indignation meeting and prepared a letter of complaint to the board of free holders. Replying to criticisms Gen. Drake says: "Everyone I have spoken with thought the flowers were fine. It may be that the whole country will adopt wax flowers instead of the natural article."—Chicago Journal.

European Horticulture.

**Cineraria Hybrida** Cactus-flowered. —This new cineraria has the habit and colorings of *C. H. grandiflora*, and the flowers, though smaller, are more numerous; it differs, however, in having its ligules recurved and twisted like those of a cactus dahlia. The plants come true from seed and are very decorative.

**Parisian Dahlias.**—A class of semi-dwarf single dahlias, marked strikingly by having each petal heavily bordered by a contrasting color, yellow, orange or scarlet upon a white ground. They are very decorative when cut, and showy as a bed or border plant.

The new lettuce, **Sucrino**, a novelty of Mme. Cayeux and Le Clere of Paris, has the appearance of a small Romaine with deep green foliage. It heads very close, a special merit in

Smilax ..... \$12.50 per 1000  
Sprengeri ..... 15.00 per 1000

**ALBERT M. HERR,** Lancaster, Pa.

A METHOD of utilizing the plum has been in use for some time in the Balkan States, which might be useful in years of great abundance. The dried plums are put to cook in copper receptacles for five or six hours, then strained and subjected to another cooking of 12 hours, all without sugar. The right density and prevention of burning are a matter of skill of course; over 9,000,000 pounds of this marmalade is exported annually from Bosnia, at an average price of \$3 per 100 lbs.

Unrooted cuttings, \$5.00 per 100.

HENRY EICHHOLZ, Waynesboro, Pa.

### Planting Borders of Ponds.

There is a certain class of very ornamental plants which, though not thriving in the water, nevertheless like to live at the edge, to extend their long roots into it and to benefit by the coolness of the soil and the moisture of the atmosphere. This ornamentation of watersides has equal value with the use of aquatics and is its necessary adjuncts, a connecting link with the land plants. The humid nature of the soil is favorable to plants of ample foliage, as well as many handsome hardy flowering plants which thrive in such locations. The choice of plants for borders of ponds will depend of course upon their size and contour; it is well to dispose the plants in colonies of three or four or more, arranging for artistic and irregular effect by massing groups of dwarf plants with taller ones, slender plants against stocky and flowering varieties. We append a list of foliage plants for bordering ponds: Gunnera scabra, G. manicata, Rheum Emodi, R. palmatum, Acanthus molle, A. M. latifolius, H. spinosissimus, H. spinosus, Funkia Sieboldiana, F. ovata, F. O. marginata, Polygonum Sachalinense, P. cuspidatum, Podophyllum, Emodi, Spirea Aruncus, S. Kamtschatica, S. Iobata, S. peltatum, Rodgersia podophylla, Lysimachia nummularia, Cyperus longus, Eulalia Japonica, E. J. folius striatis, E. J. zebrinus, Arundo Donax, Panicum virgatum, Phalaris arundinacea variegata, Gynierum argenteum, Osmunda regalis, Onoclea Germanica, O. sensibilis. Among flowering plants for this purpose may be listed: Spirea astilboides, S. palmata, S. Ulmaria, Lythrum salicaria roseum, Epilobium hirsutum, E. angustifolium, Asclepias incarnata, Caltha palustris, Iris Kämpferi, Polygonatum multiflorum, Saxifraga peltata, Myosotis palustris,

# Bay Trees

We have just received four carloads of fine shapely trees in the following sizes:

### Standard or Tree Shaped.

| Stem about | Crown. | Each.   | Stem about | Crown. | Each.   |
|------------|--------|---------|------------|--------|---------|
| 42-46 in.  | 24 in. | \$ 6.75 | 45-48 in.  | 30 in. | \$10.00 |
| 45-48 in.  | 26 in. | 7 50    | 46-54 in.  | 34 in. | 12 00   |
| 46-50 in.  | 28 in. | 8 00    | 46-53 in.  | 40 in. | 15 00   |

### Dwarf Standards.

| Total Height. | Crown.       | Each.  |
|---------------|--------------|--------|
| 4 to 5 feet.  | 24 to 26 in. | \$7.50 |

### Pyramid Shaped.

| Height.   | Base.        | Each.   |
|-----------|--------------|---------|
| 5 ft.     | 24 to 26 in. | \$ 8.00 |
| 6 ft.     | 26 to 28 in. | 10 00   |
| 6 1/2 ft. | 28 to 30 in. | 12 00   |

## BOX TREES

If wanted out of tubs we allow 10 per cent discount

### Pyramid Shaped.

| 2 Height. | Ea.    | Pair   |
|-----------|--------|--------|
| 3 ft.     | \$1 50 | \$2.75 |
| 4 ft.     | 2 50   | 4 50   |
| 4 ft.     | 4 00   | 7 00   |

### Standard or Tree Shaped.

| Crown.       | Each.  | Pair.   |
|--------------|--------|---------|
| 22 to 26 in. | \$4.50 | \$ 8 00 |
| 30 to 32 in. | 5 50   | 10 00   |
| 32 to 34 in. | 7 00   | 12 00   |

### Bush Shaped.

These do not come in tubs.

| Height.              | Each.  | Doz.   | 100     |

**C. EISELE,**

11th and Westmoreland Sts. Philadelphia, Pa.

### Stamps and Orchids.

Frequently enough we hear people speak with astonishment, not unmingled with rebuke, of the extravagant prices occasionally paid by connoisseurs for very rare and beautiful orchids. But the tallest prices ever given for the living gems of the orchidean world pale into insignificance in comparison with some of the prices paid for tiny bits of colored paper as represented by postage stamps, says the Journal of Horticulture. One or two comparatively recent instances are: Ayre collection, £45,000; Mann collection, £30,000; Avery collection, £25,500; Paul collection, £11,400; Thompson collection, £7,000. "It is estimated," said Mr. Melville at the annual meeting of the Royal Philatelic society, "that there are now at least 500,000 stamp collectors in the country. Every year, too, the value of rare stamps increases. Not many years ago a post office Mauritius stamp, either of the 1d. or 2d. value, realized £20. Today one unstamped specimen of the 1d. value is worth £2,000. A little while ago the Prince of Wales (now king), who is an enthusiastic collector, paid £1,450 for one of the 2d. stamps, which are slightly less rare than the 1d. ones. A blue 2 cents missionary stamp of Hawaii, dating from 1851, is now worth at least £1,000. An idea of the growth of stamp collecting may be gained from the number of books relating to it. My own library, an incomplete one, contains quite 2,500 books, each one about some phase of the hobby. Two important firms have between them over £250,000 invested in stamps."

COREY, PA.—The Olds Greenhouse Co. have opened a store on West Main street.

## I Am Disposing of the Florham Farms Collection of ORCHIDS

and can quote established plants of **Cattleya Trianae**, **Schroederæ**, **Labiata**, in 5 to 8 in. pots, at \$2.00 per plant.

## Robert Craig Co... HIGH CLASS PALMS

and Novelties in Decorative Plants.  
Market and 49th Sts., Philadelphia, Pa

An Eelworm in Fern Fronds.

A description is given of Aphelenchus oleisistis which has been recently noticed as occurring in fern fronds, causing conspicuous, well-defined brown stripes or irregularly shaped blotches on the fronds of various species of ferns grown under glass. The same nematode is said to cause brown patches on the leaves of begonias, chrysanthemums, coleus, gloxinias, etc. Dusting the plants with a mixture of tobacco powder and sulphur is said to be an excellent remedy for this pest.

## Chrysanthemums

Fine young stock from 2½-inch pots. Immediate Shipment.

## Have You Ever

Talked with a brother florist who uses Morehead Return Steam Traps? If not, do so at first opportunity and be convinced that you must install one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

## Cattle Manure in Bags Shredded or Pulverized

Pure—dry—uniform and reliable.  
The best of all manures for the  
greenhouse. Florists all over the  
country are using it instead of  
rough manure.

### Pulverized Sheep Manure

Absolutely the best Sheep Manure on  
the market. Pure manure and nothing  
else. The best fertilizer for carnations and for  
liquid top-dressing. Unequalled for all field use.  
Write for circulars and prices.

The Pulverized Manure Company  
32 Union Stock Yards, Chicago.

Portland, Me.

Mrs. Eliza Minott, widow of J. W. Minott, died May 20. Mrs. Minott was always interested in the success of the business and lived to see it grow to be one of the largest and most successful in the state.

The Dennett store, with new show windows and other improvements, is now very attractive.

John Burr of Freeport and S. Pederson of Scarborough are sending in fine stock.

There is a good trade in bedding plants.

KENDALLVILLE, IND.—Henry Johnson, formerly of Angola, will have to build more houses as he is crowded for room.

# AMMONIATED LAWN LIME

## Kills Weeds — Makes Grass Grow

Applied as a light top dressing to lawns it kills all flat leaved weeds, such as Dandelion, Daisy, Plantain, Sorrel, Chickweed, Moss, etc., in 48 hours, and without other fertilizer produces a wonderful, luxuriant, rich, green growth of lawn grasses, which is distinctly noticeable 50 feet away.

The use of Ammoniated Lawn Lime supersedes hand weeding of lawns, putting greens, etc. It saves the grass from being pulled up and in many cases ruined. Grasses take a new vigorous growth, avoiding probable trouble in future.

Quantities: If very weedy, 1 lb. to 40 square feet; 25 lbs. to 1000 square feet (20x50). Half to one-quarter amount if moderately weedy.

## Absolutely Guaranteed

Money Refunded if Not Satisfactory

PRICES: 5 lbs., 50c; 25 lbs., \$2.00; 50 lbs., \$3.50; 100 lbs., \$6.00; 1000 lbs. and over, 5c per lb. We will ship a 100-lb. bag of Ammoniated Lawn Lime at \$6 00, f. o. b. Louisville, to any superintendent of a cemetery, park or private estate where references are furnished. It is absolutely guaranteed as represented, if used as directed; if not satisfactory, we are to be notified within 30 days from date of invoice.

Descriptive Circular on request.

SUPERIOR CHEMICAL CO., Incorporated  
Manufacturers, Louisville, Ky.

## The "Meyer Green Silkline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also Violet Thread for tying up Violets. Price of both, \$1.25 per lb.

For sale by all first-class supply houses. If your dealer does not carry it in stock, write us direct, giving us his name.

JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.

## Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

For Sale by Leading Jobbers

Further information can be obtained from

D. D. JOHNSON CO., Manufacturers,  
64-66 Wabash Ave., CHICAGO.

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish. When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods, and the Mastin Whitewash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.

### The Worm Turns.

Stockbridge, Mass., May 23.—President Charles S. Mellen of the New Haven road, declared against less than 10 hours a day for a laborer at Council Grove, his country place, today. He discovered that William Donaldson, foreman of the flower and vegetable gardens, was employing men at \$1.75 for nine hours a day. He had been doing so for three years. Mr. Mellen gave Donaldson and his men the alternative of working 10 hours or quitting their jobs. Donaldson threw up the job and walked off the estate, followed by all the men. Most of them have found other positions.

Newport, R. I., May 22.—Deputy Sheriff Frank L. De Blois has placed on the villa of Charles Astor Bristed of Lenox and Newport, known as Fel-

There is not a house built today, that has the extreme lightness, beauty and practicalness of our U-Bar Curved Eave.

#### Hollyhocks.

One often sees the most elaborate instructions for growing hollyhocks, especially with regard to the wintering of the plants on damp soils, but whatever may be necessary when growing with an exhibition in view, I have found, says a correspondent of the Journal of Horticulture, that even with my cold damp soil and situation, excellent results can be obtained with little more trouble than that given to many other hardy plants. The hollyhock is usually spoken of as a hardy perennial, and the same term applies with about an equal degree of truth to the wall-flower and the antirrhinum. I treat it as a hardy biennial, and any plants which have a mass of vigorous leaves from the root after flowering is over are left for another season, such plants often being as effective as any, if not more so, producing, as they do, three or four, or sometimes as many as half-a-dozen, fine spikes of flower to the plant. It needs a very unfavorable winter indeed for such vigorous old plants to succumb.

Hollyhocks love a damp soil in the summer, but it is often fatal to them in the winter after they have flowered, or, in the case of plants raised from cuttings, even before they flower. With seedling plants well established in their flowering positions before the soil gets cold in the autumn there is little fear of loss in any normal winter. The first essential in growing them is good cultivation, and that involves deep digging, and liberal supplies of animal manure, with the addition of basic slag, bonemeal and superphosphate of lime, to secure a hard and sturdy growth rather than a rank and sappy one. An ill-balanced supply of plant food, which in gardens usually means an undue proportion of nitrogenous matter relatively to the mineral constituents, often results in a kind of growth which is peculiarly liable to injury, either by excessive frost or dampness during the winter. Named sorts are very fine and very tempting to grow, but when they are raised from cuttings, as is pretty generally the case, they are very liable to attacks of the hollyhock fungus, and when that is detected the best thing is to pull up the infected plant at once and burn it.

The amateur who does not make a specialty of the flower will do much better in getting a packet of the best seed of large flowered double varieties, the extra vigor of which will go far

### Our Sectional Boiler and Its Smoke Box

Only Sectional Boiler with hubs on any of its sizes, for socket connections. Has short tie bolts and no screw nipples, which makes set-up easy. Smoke box can be swung around to any position to accommodate smoke pipe. Base furnished with each boiler—no masonry work required. Send for prices.

Hitchings & Company,

to make up for any inferiority in the quality of the flowers, besides going a long way in warding off the disease. Seed may be sown in pans and put in gentle heat in February, or in a cold frame later, but the earlier the plants

can be raised the stronger and bigger they will become by the autumn, and as the stateliness of the plant is proportionate to its vigor and growth this is a desideratum. As soon as the seedlings are large enough they should

be pricked out on a bed of good soil, deeply cultivated, but not freshly manured—the matter of full sunshine or partial shade not appearing to be very essential as long as they have plenty of air, though doubtless the former is preferable. It is sometimes recommended to pinch off anything in the nature of a tap-root when pricking out the seedlings, as is done with wallflowers, to facilitate removal in the autumn with a good mass of fibrous roots with earth attached. They will make large plants by the autumn in any position if they have an extended root-run in good soil. A hot season will sometimes cause many of them to run up for bloom when they are raised very early, but, looking to future results, is not advisable to let them do so. As soon after September comes in as possible, so as to get them established before cold weather comes, they should be planted in their flowering positions, about three feet apart each way if they are massed on a border. A mulching of strawy manure will be a protection to them during the winter.

The hollyhock is not a plant for small gardens or for confined spaces anywhere, as it needs room to display itself apart from the necessity of growth. For making a break in large borders nothing is finer, especially when such borders are in front of ugly lines of shrubbery or wall. For flower beds on a lawn they may be used with splendid effect, either in a bed by themselves or in combination with other things as a setting or groundwork. Staking needs early attention, and must not be long deferred after the growths get up in the early summer. When cutting the plants down in the autumn those which it is intended to leave for another season should not be cut down too low, as the foliage on the stems, if the plants are healthy, helps to nourish the shoots from the base as well as dispose of the excess of moisture about the crowns. Water sometimes stands on the crowns where the stems have been ruthlessly cut down right to the heart of the plant. In the spring, all unsightly stumps can be removed with impunity. Plants which have flowered often die off during the winter through moisture collecting round the base of the crowns. A little of the damp soil should be removed in the autumn and the cavity round the necks of the plants filled with silver sand, burnt earth, or ashes. Some short stable litter scattered amongst the plants will also assist them to withstand any exceptionally severe weather which may come. Some recommend that plants growing in a wet soil should be removed in the autumn to a sheltered position under a south wall or hedge; but this so impairs the vigor of the plants that I think it is better to let them take their chance and risk the loss of some of them, assuming one to have a supply of young plants to fill up the gaps.

## Raffia

We are positively Headquarters for two best grades—bales or ten bales.

CHICAGO or NEW YORK,

### Vaughan's Seed Store

There will doubtless be some varieties from a packet of good seed which it is desired to save seed from, but otherwise the upper parts of the flowering stems should be removed as soon as flowering is over, or as soon as the lanky stems have become sufficiently untidy, to help the plants to recuperate. Some will come pretty true from seed, and this is perhaps the better way of trying to perpetuate a favorite variety, having regard to the likelihood of disease amongst plants propagated in other ways and the trouble involved. Seed may be sown in heat in the autumn as soon as it is ripe, and if the seedlings are potted off, kept under glass during the winter, and planted out in April, they will flower in the late summer and autumn of the same year. The easier way, however, is sowing in the early spring. Propagation of old plants may be effected in all manner of ways: by cuttings, buds, eyes, grafts, etc., one of the best, perhaps, being the taking of shoots from the crowns in the early spring and striking them in heat. These, if they can be obtained early enough in the year, will produce flowering plants the same season. Old plants may be taken up and forced for this purpose.

Though the double hollyhock only has been referred to, the single form though not producing such fine individual flowers, in the opinion of most, is not a whit less decorative as a plant than the other, and has been increasing in favor of late years. It is scarcely necessary to buy seed of single varieties unless one wants them specially, for double seed, as purchased, usually produces a certain proportion of more or less single flowers. Of the double varieties there are various forms, differing not only in their degrees of doubleness, but in the development of the outer or guard petals, these, in some cases, acting as a sort of flange to the central mass of the flower, and in others not projecting beyond it, each flower thus forming a sort of ball. The former type is certainly to be preferred.

## Here to Stay

You know the Comet is a Tale of the past.

Not so with Aphine, which has come to stay to the last.

## APHINE

Has proved its efficiency for destroying the insect pests, that infest the garden, field and orchard, to be equal to its effectiveness in the greenhouse, where it has already gained wide recognition as the leading insecticide on the market for general use.

It may not be the cheapest, but it is the best.

Aphine destroys green, black and white fly, red spider, thrips, scale, slugs, ants, and many other species of plant insects.

It will not injure the tenderest foliage, in fact, it invigorates plant life.

These statements may appear as bold assertions, but we can furnish you with many expert endorsements to substantiate all we claim for Aphine, if you are interested.

**Aphine Manufacturing Co.**  
**MADISON, N. J.**

### Common Names.

The only thing certain about common names, is that a plant has a common name when it is commonly called by that name in any part of the world. This reflection is induced by a note in a British contemporary protesting against the use of thorn-apple as a common name for the fruits of our species of hawthorn or crataegus. "Considering its long accustomed use for datura," says the writer, "this must cause confusion." Here in America the case is just the other way about. Confusion would exist if our common Jimson weed was called thornapple. Considering the case strictly on its merits, the hawthorn fruits have much the better right to be called thornapples for they are certainly little apples and they are borne on thorn trees. Nevertheless we shall have to let it go at that, for both plants are commonly called thorn-apple in different parts of the world and thus both are entitled to the name.—American Botanist.

### Introduction of the Dahlia.

The first of the dahlias—*D. variabilis*—was brought by Lady Bute to England in 1789, but was lost. It has long been known that the dahlia was first bloomed in England at Holland House, but not until the publication of Princess Marie Liechtenstein's volumes, entitled "Holland House," were the circumstances of the plant's introduction published. The imperious Lady Holland of George III.'s reign aimed at being first in everything—even her culinary productions were to be unparalleled. When in the south of France she first became acquainted with Palestine soup, a name wittily applied because its characteristic ingredient is the Jerusalem artichoke. She obtained some tubers, which were believed to be of that vegetable, and

they were sent to the gardener at Holland House. Instead of the artichoke they were tubers of the dahlia, and she had the value of the acquisition impressed upon her by a London florist offering 30 guineas (\$150) for a tuber. Another mode of its acquisition, however, is that she was at Valentia, in 1804, and had it given to her as a rarity just arrived from South America. However, she was the introducer, and thus occasioned the graceful verses written by her husband—

"The dahlia you brought to our isle,  
Your praises for ever shall speak,  
In gardens as sweet as your smile,  
And colors as bright as your cheek."

## Greenhouse Construction.

By L. R. TAFT.

A complete treatise on greenhouse structure and arrangements of the various forms and styles of plant houses, for professional florists as well as amateurs. All the best and most improved structures are clearly described. The modern and most successful methods of heating and ventilating are fully treated upon. Special chapters are devoted to houses used for the growing of one kind of plants exclusively. The construction of hotbeds and frames receives appropriate attention. Over 100 excellent illustrations, 210 pages, 5x7 inches. Cloth \$1.50.

# A House That Will Stand The Racket

**Garland's Iron Frame Trussed Houses are made in any width to 50 ft. without posts**

**Can be used in connection with either Our Channel or Cast Iron Gutters**

The above cut shows a 28-foot iron frame trussed house, with the Garland cast iron and channel gutter, concrete bench arrangement and soil conveyor.

This design of house combines all the advantages to be found in all other styles of construction on the market. "Garland Trussed Iron Frame" means lightness combined with strength and durability.

This house casts less shade, gives greater stiffness, can be built in wider spans without posts, is easier erected, and in the end less expensive. The material going into the construction of our houses is all cut to fit before leaving our factory. No rafters to cut or complicated parts to assemble.

**If you intend building it will pay you to investigate this Construction, as well as the**

**Garland Cast Iron Gutter** The gutter with a reputation. Over 75 miles doing service today by over 350 of our most progressive growers of cut flowers and forcers of vegetables in this country. The largest user of this gutter alone has over 7 miles in use.

## **The Garland Concrete Bench**

Contains more points of merit than any bench on the market.

**Our Soil Conveyor** which we are putting on the market this year, will solve your troubles in removing and replacing your soil in the future. We manufacture a complete line of needs about the Greenhouse.

## HALF HOUR CHAPTERS FOR FLOWER GROWERS

### Callas.

Some of the earlier plants should be partially dried off now and, by withholding water gradually, will be in fine condition for an early rest in summer and consequently an early start. The water supply must not be cut off all at once or the growth will be checked too suddenly. By the end of the month they will be sufficiently dried to be put outside and should be placed in the full sun. As the foliage turns color preparatory to falling, give them a wetting down with the hose once or twice a week and then let them have a thoroughly good baking in the sun, giving no water at all. Good crowns will be ripened up by the end of July and they can then be again watered. As soon as the growth is seen to be starting and before the roots have made any progress they can be potted, standing them again in the full sun and watering regularly as the foliage develops. These will be fine stock for early forcing.

### Planting Dahlias.

The quarters for the dahlias should by now be in first class condition for planting and there is no reason for any further delay. Pot roots of large size with the shoots just starting are the easiest to plant but it is doubtful whether the results are as good, especially when quality of flowers is the object, as from small plants raised from cuttings this season. These require careful handling from the first and this care is well repaid. The ground having been marked out and the plants placed, knock them out with the trowel handle and plant carefully and firmly. If the plants are long enough to have been staked in the pots then these stakes will be sufficient in the meantime and can be replaced with larger ones later, but if not a stake should be placed to each plant and the stem tied to it very loosely to prevent its being blown over. The succulent nature of the young dahlia plants always attracts insects, especially slugs and

snails, and to keep these at bay a quantity of dry lime and soot should be scattered around among the plants. Lime alone or soot does not inconvenience these pests but the two combined prove a combination that they cannot stand and are a safeguard against them. At first the plants must be watered regularly but keep the water off the soot and lime as much as possible as when wetted it loses its power as an insect killer owing to its crusting over and allowing the slugs and snails to pass over it easily. A few spruce branches or similar protection will be useful at the start.

### Bouvardias Outdoors.

The young stock of bouvardias should now be well hardened and fit for planting out where this system of culture is followed. The bouvardia, while a fairly hardy plant, has small delicate roots in the young stage, consequently the soil for the reception of the young stock should be well prepared and in good mechanical condition rather than unduly rich. The position for growing the plants should be open but, if possible, protected by distant buildings or trees. They should not, however, be grown under trees as such positions lead to weak, insect-infected growth. The soil should be broken down finely and the plants set out about 18 inches apart each way. Make the soil very firm to lead to a solid, floriferous growth rather than a rapid, soft one. The young plants, if they have been well prepared, will have from three to five or more young shoots and these should be pinched when planting out to cause them to bush out still more. As soon as planted give a thorough watering to settle the soil around each plant individually, and, if the weather proves warm and dry, spray the heads regularly twice or more daily. They will soon become re-established and grow away freely when the shoots must be pinched every two weeks to prevent flowering and lead to a bushy, well developed plant that will flower freely when lifted in fall. We usually set bouvardias in beds containing five

rows of plants to prevent walking on the soil when manipulating the growth.

### English Wallflowers.

English wallflowers are so easily managed and grown that they are often given very little attention. But far better flowers will be produced and the plants will be much more satisfactory all around if care is given from the start. To get fine plants for benching in the late fall or early winter seed can now be sown. Choose an open position for the seed bed and clean and prepare it well, sowing the seed thinly broadcast. A good watering should be given if the soil is at all dry and after sowing sprinkle some fine dry soil over the surface to cover the seed. In a few weeks the seedlings will be up and fit for transplanting, when they may be pricked out nine inches apart on well prepared, firm soil. A little cultivation regularly during the summer and occasional waterings should the weather be very dry and hot will insure good plants. The wallflower is not a gross feeding plant and anything in the way of fresh manure or over-watering is bad for it. But a mulch of loose litter during the heat of summer will prove an advantage in keeping the soil moist and the foliage in good order. Plants sown now will flower early in winter and later batches may be sown next month outdoors, or indoors in August.

### Doronicums.

There are no finer spring flowers than doronicums for cutting and they are all the more valuable on account of their flowering at a time when yellow composites or daisy-like flowers are scarce. Most of this class flower in summer and early autumn while the doronicums come in with the earlier spring flowers, are bright in color, have long stems, last well and are generally satisfactory. Our reason for calling attention to them just now is that this is the proper time for propagating. The plants should be taken up directly after flowering and divided. If there is plenty of stock use only the outer and more vigorous shoots as these make stronger, better plants. But any part of the plant will grow if stock is scarce. Each division can be secured with a little root to it and will make a plant. They should be set out in nursery beds about nine inches apart each way and by the fall will have grown into nice stock. Next year these plants can be kept intact if necessary, dividing every second year, or they may, if stock is scarce, be divided annually. Besides this method of culture, doronicums may be raised from seed sown now. The seed should be sown very thinly outside in drills about six inches apart and not covered more than a quarter of an inch. As soon as the plants are large enough to handle they should be thinned to two inches apart and will be nice sturdy little stock by autumn when they may be lifted and planted in protectors or wherever they are to flower. The flowering the first season will not be heavy but the following year they will do well. But if seed is sown in frames or in the greenhouse in February and grown on the first summer outside fine plants will be produced for flowering the following spring.

## THE RETAIL TRADE

THERE is no finer flower for bridal bouquets than lily of the valley and the accompanying illustration shows what a fine effect can be produced under the hands of a skillful designer. Growers now prepare large quantities of this favorite flower especially for June weddings and there is never any shortage. Retailers should, however, give their orders in advance as far as possible to avoid disappointment.

### Ship As Dinner Table Decoration.

The accompanying illustration shows a table decoration carried out by the Metairie Ridge Nursery Co., New Orleans, La. The dinner was

Bridal Bouquet of Lily of the Valley.

given in honor of parties leaving New Orleans on the S. S. Adriatic direct for London. The floral piece was an exact reproduction of the ship they were leaving on. The length of the ship was seven feet; the width 28 inches; the total height five feet. The hull was made of 2,000 pink carnations; the smoke stacks of Perle roses and double violets, the hatch holes of Bridesmaid roses, 14 port holes of double violets, the funnels of balsams, the railings, wireless and sail ropes were of silver cord and sweet peas, the name being made with gold letters on silk ribbon. The flags were miniature silk ones, hand made and embroidered to exactly match the flags she carries. While the guests were at the table, the flags were always waving and made a very pretty sight.

### Flowers in the Chicago Stores.

Taking a retrospective view of the month just passed the good quality of the indoor stock and the scarcity of outdoor flowers stand out as the most remarkable points. Late in March and early in April, everyone was remarking on the earliness of the season. Shrub flowers will be all over and peonies almost all gone by Memorial day, and there will be no flowers to do business with was the dire calamity foreshadowed by the man who is so busy looking for trouble ahead that he fails to enjoy the good times that are present. Then came the frost and snow and altered all this and from being a month ahead the season suddenly switched to a week or two late, and the pessimistic individuals were worried because the local peonies were not out and there would be no lilacs, only a few snowballs, etc.

The truth is that there has seldom been a better May for business or better stock to do business with than that of 1910. Taking the flowers in some semblance of order, we may mention that American Beauty roses were of better quality than usual and very plentiful right along. All the larger growers were in full cut right through the month and a large amount of stock was also shipped in from outside points. The rise of White Killarney has been rapid and this magnificent rose has taken its place as the leading white variety. It hurt the sale of Bride, even when that grand old rose was at its best earlier in the year, and now it is making inroads on Kaiserin. The flowers now being shown in the principal retail stores are splendid. On the wholesale market they are tight, of course, as they should be, but a couple of days or less in the ice box opens them up slowly and they command admiration from all. Bride and Maid may be going out. Even those most in favor of these grand old varieties must admit they are on the wane; but at all events they will die game. We have had superb flowers of both recently and the more particular buyers still want them. Although it sounds like heresy to say so, Killarney leaves a lot to be desired and the very fact of its being before the public all the year around causes a tired feeling to the eye. My Maryland has been in good shape. It is a fine rose, and its only fault is its somewhat soft nature. Mrs. Jardine is rising in favor owing to its splendid shipping qualities and the fine substance of the flowers. Field has been coming in freely all through the month but our opinion of it has not altered in the least. It is a warm weather rose and good for making up; it is pretty when open, dull and uninteresting in the bud, and can never be a first rate variety though it has its uses. There is only one red rose for general use. With all its faults and shortcomings Richmond has that honor and it has been well shown and in quantity all through the month. Chatenay, Kaiserin, Cardinal, Perle and Sunrise have all been more or less in favor, and Uncle John, a rose that is not grown as much as it ought to be, has been in fine shape right through.

SHIP AS DINNER TABLE DECORATION—BY THE METAIRIE RIDGE NURSERY CO., NEW ORLEANS, LA.

Carnations, one and all, were good, much better than usual for the month, and were in fair supply. The gluts of April were not repeated and there was a good steady demand for all the best colors. White has been on the scarce side right along, especially in the better qualities. Orchids, thanks to the arrival on the scene of the ever-popular Cattleya Mossiae, have been plentiful and it is gratifying to us to note that our oft-repeated advice to local growers to leave their flowers on the plants to develop properly is bearing fruit. A cattleya is not like a rose or a carnation and does not develop its full beauty if cut early. The development has to be on the plant. C. gigas appeared in May in fine shape. Gardenias were plentiful and in most cases good, but many growers still persist in packing these flowers in cotton wadding, the worst material possible. It is the cause of more browning of the petals of these flowers than any other item of mismanagement. Gladioli in the light and dark shades have been quite a factor and are still decidedly good. They make a brave show in these larger varieties while the smaller Childsi varieties are pretty and effective.

BOSTON, MASS.—The Rosemere Conservatories, 28 King street, Dorchester, are now under the management of W. L. Tomlinson.

SPOKANE, WASH.—Miss Margaret Armstrong is the subject of the initial number in a series of articles on "Successful Business Women of Spokane" now running in the Spokesman-Review of that city. The article occupies about two columns of space and gives a history of her business from its small start 17 years ago up to the present time. Commenting on the growth of her enterprise, it says: "Today Miss Armstrong rents an entire store at 807 Riverside. She employs a force of 12 to 14 and two florists and decorators."

## THE ROSE.

WHITE KILLARNEY is a better grower and more easily propagated than the pink type.

WHERE young stock is growing closely together on the benches spray only moderately or an attack of mildew may be caused.

KAISERIN needs very careful handling. Although there is ample substance to the petals the flowers are easily bruised in transit.

MRS. MARSHALL FIELD is one of the finest pink roses for making up in summer work. It will not thrive on its own roots, but grows freely when grafted on manetti.

### Preparations for Planting.

In order to have everything in readiness for the indoor planting one should start in time as there may be considerable repairs needed, and it all takes time, especially where there is any concreting to be done or new benches to be erected. Every rose house should be put in the best possible shape before bringing in the soil. After clearing out the old plants and removing the old soil the benches or beds should be washed off with the hose and, if the house contains raised wooden benches, all the old soil should be cleaned off, cleaning every crevice so that the lime wash will cover every part of the woodwork coming into contact with the soil. When slaking the lime, to every bushel of lime add several ounces of carbolic acid and about two pounds of flower of sulphur or powdered sulphur. These ingredients can be added when the lime is slaking. The acid and sulphur will help as a lumber preservative in conjunction with the lime as well as an insecticide. It is not essential to have the lime wash applied thickly; about the consistency of the regular

white wash will be just as efficient as if applied in a pasty form. In fact it will go into the wood to a greater depth in a thinner state.

After the houses have been thoroughly renovated above ground even to the painting (which should be done while easy access can be had) of the rafters, posts, etc., all the old soil that has fallen through the benches should be scooped out in the walks and every corner cleaned up nicely; if this is carefully attended to any of the new soil falling through the benches or in others ways spilled, can be cleaned up and used again. For drainage, we have found straw scattered over the cracks in a thin layer about the best material to prevent the soil from sifting through the cracks. The compost should have been turned several time by planting time—insuring perfect mixing, and should never be handled while wet; that is, do not plant in wet soil. If, owing to wet weather, the soil should not be in a good planting condition and to avoid delay in planting it should be carried into the houses and left as it is dumped from the hand or wheelbarrows. If left in this loose condition and with full air on the house, it will soon become dry enough to crumble nicely by hand, and until it reaches this condition it will be poor judgment to start planting.

A few words in reference to the young stock. If this needs shifting, and preparations for planting may take a couple of weeks, shift by all means. Do not let the plants become potbound and remain so for any length of time. Many a fine lot of plants have been practically spoiled by starving them in pots. If they are in 3½-inch they can be knocked out, trimmed up a little and repotted into 4-inch pots, using soil finely screened and quite rich. They can be kept going for two or three weeks longer in fine condition. See to it that the

young stock is watered evenly and allowed plenty of room and keep the buds cut off, not merely snipping off the bud, but taking the growth back a joint or two to a good eye. Directions for planting, staking, etc., will be given in future articles. E.

### Rose Wood Damaged.

ED. AMERICAN FLORIST:—

In separate package I enclose some rose branches that have been stung with some insect which finally destroys the whole plant. Can you give me the cause and remedy?

S. A. C.

The rose wood enclosed was old and nearly dead, with a few struggling new shoots. The latter had some thrips upon them, but these would not cause the wood to die. The thing appears to us like a case of malnutrition, probably owing to the roots being in an unsuitable soil. The dark marks may have been caused by some external damage, but they are too old to determine what, possibly hail last year. G.

LONDON, O.—E. J. Gould has completed his new building on Main street. It is of concrete and will be used as a salesroom.

MUSKOGEE, OKLA.—The new greenhouse in Hyde Park was finished May 25. W. H. Mitchell, formerly of Shaw's Garden, St. Louis, is in charge.

RICHMOND, IND.—Owing to increased business the E. G. Hill Co. has taken a five-year lease on the Graves greenhouse. The new house will be devoted to carnations exclusively.

## THE GLADIOLUS.

### Gladiolus Sources

ED. AMERICAN FLORIST:

From what European source can the best bulbs, largest and healthiest, of gladiolus of the Colvilli type be secured? GROWER.

### Gladiolus Primulinus.

Though introduced to cultivation some years ago, this plant does not seem to be at all common; indeed, until this spring one might have searched in vain for it in the catalogues of bulb merchants in this country, and, though it is to be found in the pages of one of the continental lists, it is priced at the extravagant sum of 10 francs, on which basis the corm is well on the way to being rated at its weight in gold. The apparent dearth of corms is not easily explained, because, while most of the gladioli reproduce themselves prolifically none is more prolific than *G. primulinus*.

A careful record of 18 bulbs received from M. Leichtlin, and planted in the late spring of 1907, shows that, when lifted in the autumn of the same year, they had produced 94 offsets, 28 of which flowered the following year; by November 9, 1909, or two seasons later, the descendants of the original 18 bulbs numbered no fewer than 182 of flowering size, to say nothing of 151 smaller offsets, and quantities of seedling corms. The plant ripens seed freely, even in such a cheerless summer as that of last year, and the seed germinates in

gentle heat. Offsets frequently flower the season after they are produced, bearing in turn a quantity of spawn, and, in congenial surroundings, the latter attains full size in three years' time.

An unusual feature is the stoloniferous character of the offsets. In this genus the spawn is generally found nestling directly under the base of the parent corm; but, with *G. primulinus*, this is not so, each offset being produced at the end of a white, string-like, creeping stem, an inch or more in length, springing from the base and sides of the corm. These stems are thickly twisted about the corm.

Culture seems to present no difficulties; in fact, it could not well be more simple. A light, free soil, thoroughly well drained, plenty of sun and warmth, with ample moisture seem to make up the sum of the plant's requirements. The provision of moisture to the roots is of importance, as well it may be, since the plant is at home around the Victoria falls, where eye-witnesses report it as growing in perennial mists; hence, no doubt, the very pronounced hooded shape of the blooms. It was noticed that, during the summer, the number of offsets produced was less than in the summer before, and this may be put down to the want of sun and warmth.

As was no doubt to be expected, the plant had not been in cultivation long before it occurred to somebody to "improve" it, and now hybrids of *G. primulinus* are offered in various directions, though the species itself is not. So far, none of these hybrids compares with the typical plant, which has a charm all its own, thanks, no

GROFF'S HYBRID GLADIOLI, 1904.

Gladiolus Ellington Belle, 1905.

doubt, to its lovely color, and whilst, perhaps, it can hardly be said to be beautiful, it strikes one at once, like many species of plants, as being essentially well bred.—Gardeners' Chronicle.

#### Gladiolus Bulb Disease.

It is well known to dealers and florists who keep these bulbs over winter in storage that there are frequently scabby looking spots, which appear on the sides or bottoms of the bulbs, and which continue to enlarge and often involve one third or more of the bulb and practically destroy it.

We have tried a solution of one part of formaldehyde to five parts of water on such diseased bulbs, using it in two different ways. First the diseased parts and spots were brushed with a solution; second, the whole bulb was soaked in it for about two minutes. Twelve bulbs of each lot were tried and were planted in the greenhouse with a result, so far, rather more favorable to those dipped than to the others.

The effect on the disease by the use of the solution shows immediately; the spots on the bulbs which are beginning their growth are soft so they may easily be scraped off; they become

hardened and the growth of the same is checked. The soaking of the bulbs is recommended as the quickest and surest treatment. It may be well to use this treatment as a preventive, soaking the bulbs at planting time in the spring.

COLLECTOR.

#### The Gladiolus of Fifty Years Ago.

A paper read by H. Youell, Syracuse, N. Y., at the initial meeting of the American Gladiolus Society, at Boston, May 27, 1910.

When Mr. Fuld asked me to contribute a paper for the initial meeting of the Gladiolus Society, I gladly consented, as I feel greatly interested in the success of the society. This arises from the fact that 50 years ago my father was the largest grower of gladioli in England, and I am proud of the fact that Brenchleyensis was disseminated by him.

It may be interesting to many if I recall, as they occurred, some of the facts relating to the early history of the Gandavensis varieties 50 years ago. It is generally known that the gladiolus family is indigenous to Africa, and I know positively that Gandavensis originated there, being found by a French sailor and taken by him to Paris. It is to Frenchmen we are indebted for the great progress made 50 years ago, for they laid the foundation, so to speak, that we have built upon and made possible the grand flowers we have today.

It may not be generally known that Napoleon the third was passionately fond of rare plants and flowers, and it is owing to his interest and enthusiasm that France today holds her position in the floral world. So eager was the emperor to add to his collection of rare plants, that he offered large bounties to his soldiers, sailors and fishermen, or to travelers who would bring him any good novelties from foreign countries. So it came about that G. Gandavensis was taken to Paris and placed in the hands of Mr. Souchet, the head gardener of the emperor, and through his industry and ability came the beautiful varieties.

I take it there are not many who can recall the old Gandavensis with its broad, yellow, poorly shaped flowers with a crimson edge, but what a beautiful and wonderful flower it was considered when first sent out, for the Colvilli varieties were the only ones grown and were called Jacob's ladders in my childhood days.

Bowensis was the next one to make its appearance. This was a dirty brick red, but was a good shaped flower with large spikes. Fanny Rouget followed; this was a very pleasing pink, but only a medium sized flower. It was about 1855 or 1856 that these made their appearance, and in 1857 the English people heard of the wonderful flowers to be seen in the French royal gardens. In August of that year, Queen Victoria, with the Prince Consort and a very large retinue paid a visit to Napoleon. At that time the gardens were a blaze of glory with their many colored flowers and the queen and all her court were completely carried away with the sight and returned to England with wonderful stories of what they had seen. The queen was so delighted and enchanted that the emperor ordered Mr.

Souchet to send her a large supply of bulbs, and so generously was the order obeyed, that the head gardener at Osborne could not find room for all, and rather than throw them away, he gave the surplus stock to my father, who was a personal friend. This was the nucleus of what eventually became the largest collection in England 50 years ago.

Soon after the queen's visit to France came what was considered the wonder of the age in the floral world, for Mr. Souchet through Victor Verdier and Messrs. Vilmorin sent out quite a number of very beautiful varieties, some of which I believe are still grown in England. The names of a few I recall are John Bull, Victor Verdier, Napoleon Third, Queen Victoria, Calypso, Duc de Malakoff, Dr. Andry, Ceres, Endymion and La Reine.

I may be excused for feeling proud of the fact that my father dissemi-

Gladiolus Princeps Hybrid, 1907.

nated the following year, that grand old Brenchleyensis, still the acknowledged leader of its class. Its origin is a mystery. How it came into my father's possession is as follows: Some years previously he had in his employ W. Casey, foreman of the hard wooded department, and traveling occasionally. He was later connected with Hugh Low & Co. On one of his journeys through Kent, he visited a small place called Brenchley. In a cottager's garden he noticed several flowers of this variety and after a great deal of persuasion and what must have been a large sum to the owner (£25, roughly \$125), he secured the stock. All the information he could gather as to its origin was that a son who was a sailor had brought the bulbs home from some foreign country—Africa, it was believed at the time. How popular Brenchleyensis became is best attested by the fact that from 1860 to 1864 our sales averaged 300,000 yearly.

Our nurseries were situated at Great Yarmouth (made famous by Charles Dickens in David Copperfield), and less than 2,000 years ago the North sea flowed where the town now stands, so of course the soil was very sandy, and to that fact I attribute our success in cultivating the bulbs. The only thing used to enrich the soil was rotten brewers' hops, and disease was a thing unknown to us.

I have always been and am still a very strong advocate of printer's ink and flower shows, both for educational and commercial purposes, and believe my past experience justifies me, as I shall show. Prior to 1860 we had sent large quantities of gladiolus blooms to the Crystal Palace for decorative purposes, free, and were assured that they were much finer than any exhibited for prizes. After much persuasion, my father consented to compete and had several large beds prepared and planted with the choicest kinds, to be raised for exhibition.

The amount of the prizes was very small, for the best collection, \$12; best 24 spikes, \$5; best 12 spikes, \$2.50; not much of an inducement for three men to travel 140 miles, pay excess luggage and hotel bills for three days, and compete against such men as Standish, Turner, Paul, Cutbush and others. We went and conquered, not only the prizes, but all the London papers from the Times down; they gave us columns of the best possible advertising, and that was not all, for the two foremen and myself booked orders the first day for more than £300, besides distributing 5,000 catalogues in the two days. Did it pay?

The method in vogue at that time for staging the flowers was to have green painted boards, 3 feet 6 inches long by 2 feet 6 inches wide; each board had 24 holes fitted with tin tubes to hold the water. Our boards sloped on an angle of 45°, which showed off the back row. We showed three spikes of each variety together with a little foliage mixed in. Some exhibitors used garden asparagus, others fern fronds, but I must say the effect of using the gladiolus foliage was by far the neatest and most appropriate. The London Times, speaking of our exhibit, said: "The flowers showed the highest cultivation and

their staging was a finished and artistic piece of work and a revelation." Certain it is that our flowers were better colored and had far more substance than those grown around London or even in France, which I attribute to the salt air and our sandy soil.

Before concluding this paper, I trust I shall be pardoned if I make a few statements relative to that beautiful old flower, the fuchsia. There are very few today who can recall the old style, the flowers of which were very small, the tube not larger round than a lead pencil. It was in 1838 that my father sent out the first one of the present type and he named it Youelli. On introducing myself, some years ago, to the late W. Harris for a long time in charge of H. H. Hunnewell's es-

H. Youell, Syracuse, N. Y.

tate at Wellesley, Mass., he recalled the fact that the first fuchsia sent out, as we know it today, was known as Youelli. In 1856 we sent out the first striped one, Lord Clive, and in 1858 the first double one, Sir Colin Campbell. I might go on indefinitely with recollections of the business in my early days, but do not wish to exhaust your patience, and in closing, beg to thank you for the privilege of addressing you on this subject.

#### A Relic of the Beagle.

Amongst other interesting relics displayed by the Japan Society at the Japan-British exhibition, is a piece of H. M. S. Beagle, in which Charles Darwin made his celebrated voyage, and which was afterwards purchased by the Japanese navy and renamed Kenke Kwan. It was on this ship that many of Japan's most distinguished naval officers received their early training. The painting on this relic is a copy of a picture of the Beagle and the signatures are those of Baron Admiral Saite, the Japanese naval minister, and Admiral Togo.—Gardeners' Chronicle.

## CHRYSANTHEMUMS

### Chrysanthemums in the South.

#### OUTDOOR CULTURE.

The growing of chrysanthemums in the open ground is in the main satisfactory and much less laborious than growing them under glass. The piece of ground selected should be well exposed and high enough to drain well after heavy rains. After applying a good coating of cow manure the ground should be dug deeply at least twice. Beds four feet wide with a walk of 18 inches or two feet between them are generally accepted as the easiest to work. The walks are dug out and thrown on the middle of the beds, giving them a slope on each side, and providing a quick outlet for the rainfall. More chrysanthemums are ruined every year for want of this precaution than from any other cause. After working in a good dressing of bone meal with a rake, the beds are ready for planting.

The young plants should be well watered an hour or so before setting out; one foot apart between the rows is the standard distance, and if only one flower is desired nine inches between the plants is sufficient. If each plant has to carry three flowers, one foot apart each way is about right. If the ground is dry leave a hollow around each plant so that the bed can be thoroughly watered. It is not necessary to syringe the plants every day, but during a dry spell the beds should have frequent soakings. All weeds must be kept down and the surface of the beds worked occasionally to keep in good growing condition. The best method of tying is to use a stake to each plant tied to an overhead wire. July and August are generally very trying to the plants. Thunderstorms are frequent and the hot sun immediately following wilts the plants badly. The best remedy for this is not to syringe but to stir up the surface of the soil as soon as it can be worked.

About September 1 is the proper time to take the bud on most varieties. The flower from a bud taken earlier rarely develops into anything salable, especially in the extreme south, hence very early varieties are not worth growing. If the ground has been properly enriched at planting time very little more fertilizer is needed, but a topdressing of vegetable fertilizer, dried blood or tankage applied after the bud is taken will increase the size and help the finish of the flower. As soon as the flowers show the first sign of color it is time to cover the beds. A light skeleton frame is raised over the beds and covered either with sash or clean cotton cloth. This protects the flowers from the heavy dews and gives them a finish but little inferior to those grown entirely under glass.

A few tobacco stems in the walks hung around on the wires after the cover is on will minimize the danger of an attack from thrips. Greenfly is never troublesome under the open air culture but occasionally the corythuca does quite a lot of damage before its presence is discovered. This attacks the under side of the leaves and is hard to reach. Coal oil emul-

sion, one part to 20 parts of water, applied with syringe to the under sides of the leaves will quickly get rid of it. November is apt to be rather wet, especially the latter half of it, therefore it is a little risky to grow late varieties unless glass is used as a covering. Wm. H. Robinson is grown most extensively as it is an easy doer and a sure one for All Saints' day. Other good varieties are C. Holst, Wm. Bassett, Monrovia, Col. Appleton, Roi d'Italie, C. Touse, Dr. Enguehard, Golden Wedding, Silver Wedding, White and Yellow Eaton and White and Golden Chadwick. The pink varieties are not much to be relied on, the color coming very much faded and running out quickly. Deep and frequent spadings of the ground before planting time and ample drainage facilities are the two most important points in outdoor culture. With these two points properly attended to anyone with a little cultural skill can reasonably expect to raise a crop of chrysanthemums.

WM LEAR.

#### Notes in Season.

Those who anticipate a good grade of blooms have no time to lose in making preparations for planting. Those intended for extra early should have been in the benches by May 26. It is erroneous to suppose the early varieties will produce blooms when planted later. It is not long to July 20, the time for retaining the first buds, and the plants will require all this time to acquire sufficient height and vigor to produce prime stock. The midseason kinds should be planted within the next few days. To the florist growing general stock this means that houses containing bedding stock must be made ready as fast as they are emptied. It really pays to put on extra help to clean out, repair and refill the benches rather than defer it until the bedding season is over.

The plants respond more quickly when new compost is used, although old soil from carnation and rose benches will give very good flowers if it has been piled outdoors one winter with the addition of one-quarter its bulk of well rotted manure. The chrysanthemum takes kindly to almost any kind of soil, provided it is porous enough to allow the surplus water to pass off freely. This matter is of importance when old soil is used and often requires the addition of sand or coal ashes (especially if it is stiff clay) to increase the porosity, inasmuch as the fiber or half decomposed sods abundant in new soil are wanting.

If the benches can be made ready at the proper time we would prefer small thrifty plants from 2¼-inch pots for benching. The accompanying illustration shows a plant suitable for the purpose. They may be shorter or taller than the one shown. They may be from one to 12 inches in height provided they have strong roots and the wood has not hardened from the want of water. A medium sized plant three to four inches high is easier to handle and plant, giving just as good results to the commer-

CHRYSANTHEMUM READY FOR PLANTING—NATURAL SIZE.

cial grower as those which have been previously shifted to 3 or 4-inch. The slight difference in quality will not compensate for the extra labor involved. If the grower has selected such sorts as F. S. Vallis, Yellow Miller, Miriam Hankey, Wm. Duckham, Lady Hopetoun, Cheltoni, etc., with the expectation of producing a good grade of blooms to be disposed of through the commercial channels, an entirely different condition prevails. None of these will be of any account unless August buds are secured, and for this reason should be strong plants from 3 or 4-inch pots for May planting or planted from 2-inch in April. March struck cuttings are necessary for these kinds. Crocus, Appleton, Helen Frick, Gloria, Mlle. Jeanne Rosette, Nagoya, etc., are more preferable for the average grower.

They may be propagated two months later and planted from the end of May to early July and produce perfectly double flowers from buds selected during September. They will not produce as large blooms as those in the first list when properly

grown, but on the other hand there are few growers that can afford space to such stock the two additional months for the advantages gained by the extra size. In other words, such kinds as are usually exhibited in collections by reason of their large size require a long period of growth and early bud to bring them to perfection; otherwise the blooms will all show the open center.

The second list can be grown in less time and a few days' difference in selecting the buds has little or no effect upon the result. It is up to those interested to decide such problems by considering the demand and price various grades will bring, in comparison with the time and labor required to produce them. We certainly have no objections to converting the so-called exhibition sorts to commercial use provided the grower is satisfied with the results, but it is certain such a course is impracticable with the average grower, and for this reason we do not think them worthy of much consideration. Kinds that produce good salable stock irrespective of date of planting or taking the

buds are most popular with florists who are scrutinizing closer each year to secure those possessing such qualities.

The space to allow each plant on the bench depends on the size of the foliage, date of planting and the quality of blooms desired. If fine specimens with perfect foliage are required 10 to 12 inches each way will be none too far to space those with average sized leaves, and this may be reduced to as low as six inches where the object is small to medium blooms. When a sufficient quantity of plants are at hand some of the small leaved sorts like Ivory may be planted two plants together. This is a very good system to adopt by those who grow two flowers to the plant, as it will give somewhat longer stems than where a single plant is stopped to make the two growths. A bench 4x100 feet will accommodate 1,600 Ivory planted six inches each way, or 1,800 with two plants to the hill at eight inches each way. When two plants are used, it is advantageous to tie each one separately to the string or stake, as the case may be, so that the blooms which mature first can be removed without unfastening or disarranging those still undeveloped.

The grower who consigns his cut or sells direct to the retailer is confronted with the problem of what kinds to plant. This is not only confined to what portion of the crop should be early, midseason and late but the varieties to constitute this array. A variety little known on the market often sells to advantage, while the Bonnaffons, Ivories, etc., will not move in proportion to the quantity grown. Those in this situation are obliged to figure out their own salvation, for advice is of little avail further than the merits of the varieties under consideration, are concerned. Those who retail their own crop are somewhat blessed from the fact that usually their regular trade consume the crop, so that the chief object to consider is the quantity to grow and have them extend over the entire season or as long a season as the demand for chrysanthemums will warrant.

ELMER D. SMITH.

#### Wood Ashes.

Following a table giving the various chemical constituents of wood ashes from different localities the thirty-fifth annual report of the Ontario Agricultural College and Experiment Farm says: "From the above figures it will be seen that wood ashes are an important fertilizer, and particularly so as a supplier of potash, which exists in a soluble form and is, therefore, readily available to plants. The amount of potash varies from about 1.29 to as high as 5.14 per cent. They also contain a fair amount of phosphoric acid, and are, of course, very rich in lime, and therefore make a good fertilizer to apply to acid soils. Farmers would do well to apply their wood ashes to their own land rather than selling them to buyers from the United States, as is being largely done at present. A number of samples of garbage ash have also been examined. In addition to supplying potash and phosphoric acid, they also contain some nitrogen."

#### Cattleya Mossiae.

We need say nothing by way of introduction of this fine cattleya. It is perhaps the best of all the labiata section and the most generally grown, the most beautiful and the most variable cattleya in existence. There are probably more plants of this orchid grown in America at the present time than of any other species and it is the most generally useful of all. *C. Mossiae* takes longer to get down to business in spring than most other cattleyas but when it does start it goes ahead and it is not at all unusual for it to flower, grow and flower again and then make up a good growth in autumn to carry the flowers in sheath over winter. This habit of flowering twice in a season makes it a most profitable species for the cut flower grower who is looking for quantity of flowers and although the old fashioned orchid growers predicted all kinds of trouble for the plants that do not keep to a regular routine of growth, flowering and rest, we could never see that the plants that flower twice a year were any less healthy than those which only flowered once. One thing necessary is plenty of warmth and sunlight in late summer and fall to insure the late formed bulbs being thoroughly matured and any plants with their bulbs in at all an unfinished state must not be over dried during the winter.

*C. M. Reineckiana*, the white sepalated form of this species illustrated herewith, has long been in cultivation and a fine plant of it was exhibited at the recent orchid exhibition in Boston by J. T. Butterworth, Framingham, Mass. This form has the anterior lobe of the lip streaked with purple as in *C. Mossiae* generally. Conse-

quently, although a beautiful variety, it cannot compare with *C. Mossiae* Wageri which has no purple in it at all, simply a yellow stain on the lip and is probably the most beautiful albino cattleya in existence.

## WITH THE GROWERS

### The Julius Roehrs Co., Rutherford, N. J.

It is unnecessary to elaborate on the nation-wide reputation of the Julius Roehrs Co. For many years this concern has been noted for the fine quality of flowering and foliage plants which it grows. At present, among many other notable features, are the orchids. In an experience covering the past quarter of a century, we have never seen such a fine display of orchids in all the well known commercial varieties as were found on a recent visit to this range. Alone, they would comfortably fill the average exhibition hall and if they reach Boston in good shape, we expect to hear from them. While the orchids may be classed as magnificent, there are many other features of the range that are noteworthy. In crotons, fancy leaved caladiums, marantas, *Ficus pandurata*, cibotiums and other ferns, they are in the front rank of the growers of this country, if not of the world. They are noted for the splendid specimens of *Begonia Gloire de Lorraine* which they send out at Christmas. At the present time a force of men are kept busy preparing thousands of these young plants for shipment, this branch of the business having grown enormously in the past few years. The rose, Newport Fairy, may be seen in fine condition, grown

CATTLEYA MOSSIAE.

both as a standard and bush plant. There is also a variety of other good pot roses. One of the noteworthy features of the place is the large area devoted to *Adiantum Farleyense*, which is grown to perfection. The palms, bay and box trees are always striking features, in fact a tour of the range is a succession of the most interesting things in horticulture. The range is less than one-half hour's ride from New York and visitors to the metropolis who are horticulturally inclined will find themselves well repaid for taking a run out to Rutherford.

#### Salter Bros., Rochester, N. Y.

Salter Bros. have two large divisions in their business; the home establishment on Park avenue, and the other in Fairport, 10 miles east of Rochester. They commenced the development of the Fairport branch about 15 years since and they now have a glass area in this place of 30,000 square feet. They make a specialty of carnations, handling 35,000 plants. Amongst the white varieties Richard Salter says they find Queen Louise and White Enchantress two of the best. Enchantress, in its light and deep pink forms, is their most important pink carnation. They grow a considerable number of Winsor but find it has a tendency to burst its calyx. Beacon is an important red with them, and they grow a large number of Lawson. A considerable number of other varieties are grown, but those mentioned are the most important.

A number of years since Salter Bros. used to grow roses extensively but they have now practically given them up. Richard Salter says there is too little sunshine in winter in the Genesee valley to make rose growing financially successful. About 35,000 chrysanthemums are grown in benches, and they are now busy planting them out. This firm is the only one in this part of the country to make violet growing a success. The only variety grown is the single California (Madame E. Arene). A narrow low house, 200 feet long, is devoted to it, and Richard Salter says they find it commercially successful. Amongst other things grown for cutting are sweet peas, asparagus in different species, smilax, etc. They grow an immense number of the standard bedding plants and annuals.

One of the greenhouses was erected by the King Construction Co. about five years since and is 34x200 feet, with a furrow in the center. Richard Salter says it is a style of greenhouse construction which appeals to him very much. This system is heated by hot water. The acreage of the Fairport branch is 17 acres, and it slopes gently to the southwest. The soil is light, rich loam, and is excellent for the growing of stock. Outside they grow the most popular perennials and large quantities of sweet peas and asters for the cut flower trade. All of the carnations are grown on this ground, and shrubs are grown for forcing.

At the home establishment on Park avenue there is about 20,000 feet of glass, and the ground area is about one and a half acres. They acquired

CATTELEYA MOSSIAE REINECKIANA.

this property about 20 years since, and it is now almost in the center of the best residential part of Rochester, where real estate is highly valuable. It would not be profitable to hold it for florist purposes, if it were not largely occupied with greenhouses. Palms, ferns, dracenas, aspidistras and bedding plants are grown here in large quantities. Carnations and chrysanthemums are also grown in the benches. A limited number of orchids are grown, and *Cattleya Trianae* is the most important one. The white variety of *Swainsona galegifolia* is grown very successfully, and is remarkably useful for cut flower purposes. A number of bouvardias are grown, and Richard Salter says they may perhaps start to grow them more extensively. Hardy shrubs, such as lilacs, *Prunus triloba*, wistarias, spireas and deutzias are forced extensively. This system is heated by two Woodbury steam boilers which can be worked independently of each other. This boiler is not now in the market.

The firm conducts two retail stores, one on West Main street and the other on East Main street. The large store on East Main street is always kept very attractive, and very tasteful displays of cut flowers and greenhouse plants are always shown in the windows. They conduct an im-

portant business in vegetable and flower seeds.

The firm consists of the two brothers, Richard G. and Albion H. Salter. Many years since, the two brothers assisted in the well-known seed business of James Vick, later known as James Vick's Sons, and which largely aided them in business ability to build up the fine establishment they have now. Their father, Richard Salter, who died a few years since, was born in Devonshire, England, and came to this country by way of Canada in 1866. He was a gardener of the old school, and had charge of the Whitney estate in this city for a number of years. The firm of Salter Bros. holds a very honorable reputation in this city, and in social life the brothers are highly esteemed.

JOHN DUNBAR.

AKRON, O.—Work was started by O. C. Akron, the millionaire match manufacturer, on his model farm recently, which will result in the immediate construction of 11 greenhouses each 30x156 feet. It is Mr. Barber's plan to have between 50 and 60 acres under glass when the structures are complete. The houses will differ largely from the greenhouses common in this locality and will be of decidedly improved types. Fruits, vegetables and plants will be grown.

# THE AMERICAN FLORIST

1885 TWENTY-FIFTH YEAR 1910

Subscription, United States and Mexico \$1.00 a year; Canada \$2.00; Europe and Countries in Postal Union, \$2.50. Subscriptions accepted only from those in the trade.

The chrysanthemums figured on page 805 in our issue of May 21 were grown by Louis Buchner of New Orleans and not by Robt. Lockerbie as there stated.

A MOST interesting paper on the early varieties of gladioli and their introduction to British gardens by H. Youell, Syracuse, N. Y., appears upon page 945. The information is especially opportune now on the threshold of the career of the new society which, while we may not be in perfect accord with increasing the number of societies indefinitely or of having societies for every flower grown, we heartily wish every success.

A TELEGRAPHIC report of the first day's proceedings at the convention of the American Association of Nurserymen appears in our "Nursery trade" columns, page 970, of this issue.

THE publication by Cornell University, Ithaca, N. Y., of the "Classification of the Peony" marks the third step in the progress made in clearing up the synonymy and other work with the peony undertaken jointly by the American Peony Society and the Department of Horticulture of the above university. It is a worthy follower to the "Check List" and "The Peony" from the pen of Dr. Coit, the present work being by Leon D. Batchelor who, since Dr. Coit's departure for California in 1908, has been in charge of the peony plots here. A very large number of varieties are described and the book should be written for by all who are in any way interested in the peony.

## Peony Society's Meeting Postponed.

Owing to the continued cool weather it has been found necessary to postpone the meeting of the American Peony Society to Tuesday and Wednesday, June 14-15.

A. H. FEWKES, Sec'y.

## Personal.

E. S. Miller, Wading River, N. Y., was seriously injured June 5. He was riding a bicycle and the forks broke, throwing him heavily to the ground. He was severely cut and bruised and will be confined to the house for some time.

## National Council of Horticulture.

The ninth installment of the press service of the National Council of Horticulture consists of practical articles on "Growing Watermelons," "Growing Celery" and "Chrysanthemums Out of Doors." These articles are free to nurserymen, seedsmen, local editors and others who can secure them by writing J. H. Burdett, 1620 W. 104th place, Chicago.

## Society of American Florists.

### REGISTRATION OF ROSE.

Public notice is hereby given that A. N. Pierson, Inc., of Cromwell, Conn., offers for registration the rose described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

### RAISER'S DESCRIPTION.

Red Killarney.—A sport of Killarney, originating with A. N. Pierson, Inc., in 1908. It is identical with Killarney except in color, which is much brighter, showing a strong tendency to red, some blooms having been as dark as Richmond, the average the entire year a shade lighter than Richmond.

H. B. DORNER, Sec'y.

June 2, 1910.

### THE TRADE EXHIBITION.

ED. AMERICAN FLORIST:—

I am sending a diagram of the space in Convention hall for the trade exhibition, and you will note that fully 60 to 70 per cent of the space is already reserved. There are a number

of large growers who will undoubtedly exhibit from whom I have not heard, but if all manufacturers, florists and florists' supply houses, contemplating exhibiting would kindly notify me at once, stating required number of square feet of space it will facilitate matters greatly.

The souvenir album on which the local committee are working will certainly be a work of art. We expect to have it out about July 1. It will contain 100 pages, with many original views of the streets, parks, private residences, public buildings, river and lake, also several interesting articles, as follows: "Rochester Florists," by Geo. B. Hart; "Rochester from the Nurseryman's Viewpoint," by William C. Barry; "The Seed Industry," by Charles W. Crosman; "Rochester Florists' Association," by Fred W. Vick; "Rochester," by the secretary of the chamber of commerce.

C. H. VICK, Sup't.

## American Rose Society.

### A NEW SPORT OF KILLARNEY.

The A. N. Pierson Co., Inc., Cromwell, Conn., filed with the American Rose Society notice of registration of a new sport of Killarney originating with them in 1908. It is identical with Killarney, excepting in color, which is much brighter, showing a strong tendency to red, some blooms having been as dark in color as those of Richmond and the average of the crop for the entire year of 1909 was only a shade lighter.

The question has been addressed to the secretary, whether the American Rose Society will have a June show, but up to this writing there has been no steps taken toward such an exhibition.

The Minnesota State Rose Society has applied for a bronze medal to be offered at its summer exhibition to the best exhibit by an amateur. The definition which the society gives of an amateur is "one who grows the plants himself or herself, but does not regularly employ a gardener to grow them, and one who does not grow or sell plants as a business." Last year the American Rose Society offered its bronze medal and this was awarded to Mrs. F. H. Gibbs, St. Paul, Minn. BENJAMIN HAMMOND, Sec'y.

## Meetings Next Week.

Baltimore, Md., June 13, 8 p. m.—Gardeners' and Florists' Club of Baltimore, St. Paul and Franklin streets.

Cleveland, O., June 13, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit avenue.

La Crosse, Wis., June 14.—La Crosse Gardeners' and Florists' Society, Hotel Stoddard.

Lake Geneva, Wis., June 18, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

New Orleans, La., June 12, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

New Orleans, La., June 16.—New Orleans Horticultural Society, Kolbs' hall, 127 St. Charles avenue.

Newport, R. I., June 15.—Newport Horticultural Society.

New York, N. Y., June 13, 7:30 p. m.—New York Florists' Club, Grand Opera House building.

Pasadena, Calif., June 17, 8 p. m.—Pasadena Gardeners' Association, Board of Trade rooms, West Colorado street.

Rochester, N. Y., June 13, 8 p. m.—Commercial Florists' Association of Rochester, 416 Cutler building.

Scranton, Pa., June 17, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Springfield, O., June 13.—Springfield Florists' Club, office of the Good & Reese Co.

# Flowers for the June Brides

If there is one season of the year when flowers should be fresh and bright, it is NOW. Bridal bouquets and flowers for the young buds have to be of the best of their kind, and these we have in quantity. We are especially strong on

## ROSES

in all the leading varieties—**Richmond, Killarney, White Killarney, My Maryland, Brides and Maids.** There is no sign of mildew, and both flowers and foliage are clear and bright. We have them in all lengths suitable for design work or for presentation bouquets. You will make no mistake in sending us your orders for large or small quantities.

**Carnations** too are a strong leader here. In our experience on this market we never remember the quality of carnations so good at this season. Our growers are sending in stock that would be a credit to them in February, in all the leading varieties. We also offer a cheaper grade in quantity. Write or wire us for special prices. **Sweet Peas, Peonies, Gladioli, Easter Lilies and Greens** of all kinds. Everything needed by high-class retailers.

We Give Personal Attention to All Orders.

### Chicago.

#### NO AFTER-HOLIDAY SLUMP.

Almost always after a holiday there is a decided slump in trade, but all were pleasantly surprised to find that this did not materialize after Memorial day. The out-of-town trade from this market on Friday was exceptionally good for the season of the year and this was duplicated on Saturday. The demand for the season is remarkable. With the constantly increasing area of glass feeding this market one would naturally expect that at such times as the present when, beyond weddings, there is no special demand, that stock would be piling up. But nothing of the kind occurred during the present week, stock moving nicely right along. We were permitted to see the books of several prominent wholesalers and their record shows an increase ranging from 15 to 40 per cent over that of last year. This, of course, was to some extent to be expected, partly on account of the in-

crease of glass, partly owing to scarcity of outdoor stock, but, anyway, coming directly after a holiday that was remarkably good, it is eminently satisfactory and speaks well for the business acumen of those who have to move such quantities of stock. As to the quality of the flowers, there is little difference to last week. American Beauty roses are still coming in good shape for the season while the quality of Bride, Bridesmaid, Killarney, Richmond and other roses is truly remarkable for June. The continued cold weather has, of course, a good deal to do with this, for had the heat of March continued the quality by now would have been pretty poor. Carnations, too, are well above the average for the season, fine, well colored flowers with good stems in quantity. Early in the week these were rather too many, some wholesalers having more than they could handle while others reported a good clean up. Orchids are still plentiful, Cattleya Mossiae still being the stand-

by. There is little difference in values though some exceptionally good flowers have been sold at slightly higher prices. Lily of the valley has been in brisk demand, but there has been sufficient in and of excellent quality. Peonies are selling well, the quality of the flowers coming from down-state being very fair, all things considered. In many cases the better prices realized this year for the stock sent to market will just about recoup growers for their losses by frost. Lilies are still plentiful and good. Callas are not so plentiful nor are they wanted. There is quite a lot of Lilium candidum on the market, arriving tight but opening up well in the coolers. Cape jasmines continue to arrive but are not much in demand. Cornflowers, snapdragon and small flowers generally are in good supply.

#### NOTES.

Wietor Bros. have their new greenhouses all planted to young roses and the stock looks fine. Beauty, Killarney and White Killarney are the varieties

# Bassett & Washburn

Store and Office: 76 Wabash Ave.,

**CHICAGO**

Greenhouses: HINSDALE, ILL.

planted. The cut flower stock coming to the store on Wabash avenue is remarkably good and moves out well. Plant trade in roses, carnations and chrysanthemums has been exceptionally heavy this year according to Nic Wietor, the size of the orders coming in being well exemplified by one for 8,000 Killarney, an order that completely cleaned the firm out of this favorite variety in small stock.

At the Poehlmann Bros. Co.'s we noted extra fine valley. A big lot has been grown at the greenhouses and it is in just right for June weddings, while the stock is just of the class wanted, good spikes with fine, clear bells and ample foliage. Orchids are still coming along in good shape and the extra long stemmed Killarney and other roses are especially good. Carnations are in good shape and there are good offerings of peonies. Spanish irises are coming along well at the greenhouses and large cuts are expected in about a week.

Zech & Mann's fine roses and carnations are coming to be well known among out-of-town customers, the orders for them coming in very freely. The Bridesmaids are exceptionally fine in color and we cannot recall seeing such fine stock of this variety in June. The end of last week was an exceptionally busy time. John Zech has been under the weather for several days, but has had to stick to business, owing to the rush. He looks, and says he feels better just now, so probably hard work agrees with him.

Frank H. Wilhelm opened up a retail store at 1539 W. Twelfth street. He stated that business has been very good, he receiving his share of funeral work. On June 2 a fire broke out in the upper story but no damage was done. Mr. Wilhelm considered himself rather fortunate, as he carried no insurance; it is needless to state that

**"The Busiest House in Chicago"**

## Brides for the June Brides

The finest that are coming into this market. Also Killarney, Maids, Richmond and Chatenay. Extra fancy Carnations, Peonies and Cornflowers. You will profit by sending us your orders.

# J. B. DEAMUD CO.

51-53 Wabash Ave.,

**CHICAGO**

the place was insured the next day. He was formerly foreman of the Wells-worth Farm greenhouses, Downer's Grove.

J. A. Budlong's stock is fine in every particular and it was probably the excellent quality of the goods that led to a complete clean up at the time some other houses were long on various stocks early in the week. Carnations, sweet peas and roses continue to be the chief offerings, and they are certainly good. Charlie Zapfe is now so far restored to health that he takes three good meals a day and says he is glad the strawberry season is on.

A branch of the Briggs House florist was opened June 3 at 57 Randolph street, in the Masonic Temple building. Fine stock has been put in and altogether a very businesslike looking store has been arranged. The windows facing the exit of the building will be a fine advertisement.

Ferdinand Sartor, 5964 N. Paulina avenue, has planted out 35,000 carnations. In the greenhouses he has

planted two beds of cucumbers and green pepper, these being a better paying proposition than carnations at this season.

Peter Reinberg's sales are keeping up remarkably well since Memorial day, while the stock is fine in all varieties. Carnations are still leading and the flowers are of fine substance, large and with good stems. Richmond roses still continue a leader in this line.

Clesen Bros., corner of Robey street and Norwood avenue, have erected four new greenhouses for vegetable growing purposes. Winandy Bros. have the contract and it is expected the work will be completed about July 1.

The stock arriving at Hoerber Bros. is fine in every way. good carnations, Bride, Bridesmaid and Killarney roses being among the leaders. Work is now going ahead rapidly with the new plant at Des Plaines.

John Kruchten has been showing exceptionally good Bride, Bridesmaid and Richmond roses and carnations during the past week.

# Send us your Orders for June Weddings

and we assure you that they will be carefully executed, being able to give you choice stock which we know will please your most particular customers.

We offer choice **Beauties** besides long stemmed flowers in the following varieties:

## My Maryland, Killarney, Kaiserin, Field, Richmond, Jardine

and others. They are the best in this market and cannot be beaten on any other. The foliage is good, the flowers of fine color and they have not a fault.

## Our Carnations

are as fine as can be had. Can supply Perfection, Victory, Bassett, Enchantress, Winsor, Aristocrat and Lawson of A. 1 quality. Also fine home grown Asparagus Plumosus and Sprenger. We are paying especial attention to out-of-town orders, and our facilities for shipping are of the best and most up-to-date.

Let Us Have Your Next Order.

WHOLESALE

GROWER of

# CUT FLOWERS

At the meeting of the Florists' Club, June 2, 15 members were present with Vice-President Philpott, all the way from Winnipeg, in the chair in the absence of President Asmus. It was decided to give a dinner at the next meeting and all members are invited to attend. The dinner will be complimentary to members, who are at liberty to bring friends at \$1 per head. A representative of the Michigan Central railroad was present with a view of securing the transportation of the members to Rochester for the S. A. F. convention in August, and he offered several inducements.

Bassett & Washburn are shipping heavily all around of Kaiserin and other roses, the sales being away above the average for the season. Mr. Washburn says few realized until this year, when they were short, what an influence on the market the peonies have. They are selling out clean every day of all classes of stock, White Killarney, Kaiserin and Killarney roses being among the leaders.

At the J. B. Deamud Co.'s store excellent gladioli have been shown all week, but they are not there long as the quality leads to a quick disposal. The same is true of the peonies which are in fine shape now. This firm has been handling a lot of new brake ferns which are filling up a gap before the regular shipments arrive.

The failure of the Jones Dry Goods Co., of Kansas City, will probably remove one of the best outlets of stock from this market. It was not unusual for this concern to order 8,000 to 10,000 carnations at a time, and they often helped to clean up a surplus. There is little hope that the floral department will be continued.

Fred Wittbold is recovering rapidly from his recent accident, in which the conveyance he was riding in was turned completely over by a collision with a street car. He has had to carry his arm in a sling, but was very fortunate in coming out of it as well as he did. It might easily have been far more serious.

Vaughan & Sperry report a record-breaking business during the month just passed, May having been much better than an average winter month. They are showing extremely fine stock in all varieties, carnations being especially good. We also noted large quantities of fine Lillium candidum here.

The quality and color of the Killarney roses now coming to Geo. Rein-

berg's store is something well above the average, the flowers being elegant for shipping on account of their great substance. Richmond is also fine and we noted some magnificent sweet peas and orchids.

Chas. Schlieff, 5655 Ravenswood park has nearly completed the erection of three new greenhouses and retail store. He now has 5,000 feet of glass. Among things of interest here, is a bed of mushrooms from which Mr. Schlieff stated he has cleared \$200.

C. W. McKellar reports business fine, especially along the line of flowers suitable for wedding decorations. Orchids, valley and sweet peas have been especially good sellers, with a rather erratic demand for gardenias.

Ed. Misiewicz recently purchased the retail store from M. B. Steczynski, 1166 Milwaukee avenue, and took possession May 1. The place is in charge of his son, Sigmund, who was formerly employed by Mr. Steczynski.

Mrs. A. E. Liebermann, 2822 W. Twelfth street, bought the stock and fixtures in the store from her son Frank for \$300. The building was formerly occupied by Mrs. Ernst who has retired from business.

Orders come thick and fast at E. C. Amling's, where we noted especially good red peonies and sweet peas, though the stock of all kinds in this noted store is well above the average.

A cablegram received by C. L. Washburn from O. P. Bassett says he arrived in England all safe, ate three meals a day all the way over and had not the least signs of "mal de mer."

Among the stock at E. F. Winter-son's we noted large quantities of good Cape jasmines this week and carnations in all the principal varieties, good shipping stock.

Total .....\$229.00

The club has on hand, train signs, in care of E. F. Winter-son.

L. H. WINTERSON, Sec'y.

### NEW METHODS OF PLANT BREEDING.—

Plant breeders will be interested in this bulletin, (No. 167) of the Bureau of Plant Industry, by Geo. W. Oliver, as it solves the perplexing problem of crossing certain species of plants which heretofore has been impossible owing to the fragile nature of the sexual organs. It deals with lettuce, alfalfa, grasses, helianthus, pansies and dahlias and a bulletin which could be read with profit by anyone interested in hybridization as the methods described are comparatively simple and easily understood. It is illustrated with fine half-tones.

# FOR JUNE WEDDINGS

—AND—  
Commencements

Our stocks are in the finest possible condition for the season.  
Carnations and Long-stemmed Beauties are especially good.

**CHICAGO.**

# FLOWERS FOR JUNE WEDDINGS AND SCHOOL COMMENCEMENTS.

To those customers who have been using our flowers right along we need only say that our stock was never in better condition than at present. A word to the wise is sufficient.

To those who are not among our regular customers, we wish to say that there are no better flowers reaching this or any other market than those we are now receiving from our mammoth greenhouse plant.

**Beauties**, long stemmed, medium and short for all purposes. **My Maryland**, **Killarney**, **White Killarney** and **Richmond** roses are especially good and we have extra long stems, 40-inch, fine for graduation bouquets, **Carnations** in all leading varieties. Plenty of fine colored **Enchantress**, **Winsor** and **Lawson**.

Home-grown **Orchids** (Cattleyas) a specialty, **C. Mossiae** and **C. Gigas** are in full cut and the flowers are especially good. **Greens** of all kinds **Adiantum** and **Asparagus**.

**POELHMANN BROS. CO.** 33-35-37 RANDOLPH STREET. Chicago,  
OFFICE AND SALESROOM:  
LONG DISTANCE PHONE, RANDOLPH 35.

### Indianapolis.

#### TOO MUCH STOCK.

If the calendar did not show us that it is June we would think that we were in the middle of August, judging from the sudden lull in business. It is not because we have no flowers, for they are plentiful. The market is flooded with peonies, carnations and roses, sweet peas, swainsona, candy-tuft, feverfew and the like. The best carnations can be had for \$2 per 100 now.

#### NOTES.

Pahud Floral Co. has just secured a handsome new wagon from a local manufacturer and acquired a fine new grey horse with an appropriate set of brass mounted harness, bearing "Pahud" tags. The wagon is of buff color.

The regular meeting of the State Florists' Society was held in the state house last Wednesday in further consideration of the coming chrysanthemum show.

Smith & Young have been supplying us with the best peonies ever grown in this locality. They have

been a great drawing card in window displays.

Herman Junge and Carl Sonnenschmidt took a trip to Richmond last week to inspect Hill's and Knopf's roses.

John Heidenreich is now using his recently acquired pleasure automobile to haul bedding plants.

Billy Smith, formerly employed by Bertermann's, is now working for the Roepke-Rieman Co.

Ed. Bertermann and wife have gone to Detroit to participate in a skat tournament.

Jim Walrod is seriously ill. He is an old-timer in the business.

A. W. B.

### St. Louis.

#### TRADE QUIET.

The weather still remains cool and very unseasonable and it appears to influence trade to a great extent. School closings and conventions have kept things stirring a little. Planting out is still, owing to rainy more than cool weather, very backward. Carnations are quoted at two and one-half cents for the fancy, and considerable stock

is sold much cheaper, especially those of inferior grade. Peonies, sweet peas and Cape jasmine have all shortened up. The theaters now open at the summer gardens are not using many flowers. Roses are looking nice and are of good quality. Quite a few Killarney and long-stemmed American Beauties are in.

#### NOTES.

Under the provision of the will of the founder, the Missouri Botanical Garden opened its gates to the public, Sunday from 2 p. m. until sunset. Several thousand attended and were much pleased. The cool, moist spring has caused a new growth of foliage following the April freeze, which gives a fresher shade of green to the vegetation than is usual so late in the season. Notwithstanding the cool weather the garden is fully planted for the summer. Pansies and early spring flowers are looking fine. Special bedding designs are the feature. A very attractive serpentine design in succulents is in front of the sunken garden. There is a fine collection of viburnum and beard tongues in the North American grounds. Groups of tropical plants are

placed outdoors near the plant houses, also plants yielding fruit fibers, oils, gums, dyes and other products.

The Riessen Floral Co. had the decorations for the banquet given at the Mary Institute graduation exercises. There were 10 long tables and five centerpieces of Shasta daisies with asparagus. The banquet hall was decorated with smilax, palms, Boston ferns and bay trees. The main tables, where were seated the graduates, had 10 large vases of yellow daisies, asparagus, etc., the colors of the school.

The Retail Florists' Association met Monday evening at the Knights of Columbus hall at 8 p. m. The majority of members were present. Business of importance was transacted. The president called a special meeting for Monday evening, June 20, at 8 p. m. All members are requested to be present.

Judge Vesey and daughter, of Fort Wayne, Ind., visited us Sunday. He returned home in the evening, after visiting the wholesale district and calling on many prominent retailers.

C. Young & Sons Co., have a fine assortment of flowering plants of all varieties, also a large supply of rose bushes.

Some extra fine sweet peas were seen. They came from the Cincinnati market, also some very fancy carnations.

John Seidle is sending in daily to F. C. Weber a fine stock of roses. He is building a new residence.

Early closing of the wholesale houses will start in July. W. F.

### Baltimore.

June was ushered in with many weddings, and the demand for the best class of cut flowers has been fairly good. The commencement season has opened also and there is a good deal of business distributed pretty equitably. Memorial day did not prove to be much of a business maker, although the weather was propitious. The commemoration of the soldiers and sailors seems spasmodic. Some years show a good deal of activity, but others a lack of life which savors almost of listlessness. This was one of the times when outdoor sports and excursions

seemed to rather have the call, and the exercises and customs which belonged to the day were largely perfunctory.

This seems to be the most up-side-down kind of a season ever experienced in this quarter of the globe. Early in last week from various points of the state came words of snow squalls, and a frost which did more or less damage according to the situation was general. Later in the week came rains which were general, and for the past 24 hours there has been a downpour heavy and continuous, the temperature being much too low for comfort of humans, though the colder blooded varieties of garden plants seem to be enjoying it, whilst those of a tropical nature look yellow and miserable. Doubtless there will soon be a change and under the general but well established law of equilibriums we may look for a summer in which the mercury will soar way up.

The popular interest in gardening seems to be extending in all directions and the papers take great pleasure in recording the achievements of amateur gardeners, often accompanying the descriptions of well-designed and neatly kept gardens with illustrations. One of the dailies seems to keep a list of those who set out window and porch boxes and takes considerable space to give the names of those who interest themselves in the decorations. One of the illustrations of successful gardening is the rose garden of John M. Adams and wife, at Roland Park, one of the most beautiful of the many beautiful suburbs of this city. A paper declares that it contains 500 rose bushes and that every bush "is in full bloom and loaded with buds," with a host of other blooming plants which are described as making a "veritable bit of fairyland." The lady gets the credit for the enthusiasm and skill which provide this display, and the site being on a popular thoroughfare, a great many people in automobiles, carriages and afoot enjoy the beauty of the place. Mrs. Adams is noted for her success with chrysanthemums in the fall and on more than one occasion she has carried off with flowers produced outdoors, the prizes offered at shows in competition with

commercial growers. All this is very encouraging, since the passion is contagious, and the trade cannot help but profit by the growing ardor for making homes and gardens beautiful.

Richard Vincent, Jr., and Mrs. Vincent, have returned from their European trip, having visited many of the leading establishments of Great Britain and the continent, finding doubtless new geraniums to add to their already notable collection.

The Gardeners' Club has set aside \$25 to supplement the prizes offered by the Sun for the most attractive and best cared for back yard gardens and window boxes. S. B.

### Pittsburg.

Good stock is now beginning to get scarce. By the end of the week good roses were hard to obtain and really first-class carnations were not at all prominent. Sweet peas were in very active demand, and although a record is being made in granting marriage licenses during the first week in June, lily of the valley is not moving faster than ordinarily. Lilies are slow sellers at prices that are the lowest of the year. Cattleyas and Beauties move nicely at reasonable figures.

### NOTES.

Misses Forbes and Donahey, Wheeling, W. Va., spent a few days in town buying anything useful in their line, and report that they have more weddings booked this coming week than they have had at any time since they have been in business, and anyone knows that means a good many.

Wilbur A. Christy, Kinsman, O., was in town June 4, making arrangements with the McCallum Co. to handle his cut of gladioli. Mr. Christy has been a heavy shipper of fancy stock to this market for a number of years.

The McCallum Co. has increased its force—a 10-pound boy to W. Q. Potter, and, on June 4, E. Niggel of the same company was presented with a fine baby boy.

George Werheim, Liberty avenue, reports a good planting season, and also has been very busy with a number of weddings.

TRADE DULL.

The business for the past week has been unusually dull, as is almost always the case immediately after Memorial day. The weather, too, has been so very bad that it has had a great deal to do with the small amount of stock handled. With the exception of two or three days, the whole week has been cloudy and damp, hindering the stock from opening and the retail trade from venturing out. Roses, while coming in slow, have been of fair quality. But the small demand for this flower has kept the wholesale dealers plentifully supplied. Bride and Bridesmaid have been of good color, but very short stems, as has been the case with Killarney and White Killarney. Chateau and Perle have almost quit flowering, but their place is very well filled with Carnot and Kaiserin, which have been of very good quality. Beauties are no longer in evidence, except a few short stemmed flowers. Minnehahas are increasing rapidly and are good sellers. Sweet peas, valley and iris are moving slowly. The wet weather has done much damage to the gladioli, having caused many thousands of bulbs to rot before starting from the ground. Orchids have not been plentiful, every one coming in being gobbled up at a good price. Carnations are rapidly decreasing and are expected to go off crop at any time. There is a rapid sale for all shipments that are being received, especially the light colored varieties. Green goods are very

scarce. Hardy ferns have fallen off at an alarming rate and some dealers have quit shipping until the new crop is ready. Smilax is the only green that is in abundance. Asparagus, both plumosus and Sprengeri, is not plentiful enough to supply the demand. Adiantum is very scarce, but the quality of that on hand is excellent.

### NOTES.

The W. C. T. convention, which has been held here, has brought several florists around. Among those present were E. Tatro of Salina, Kans., J. Steinhauer of Pittsburg, and R. L. Isherwood of Chillicothe.

The Geo. M. Kellogg Flower & Plant Co. has been doing a good business lately. Their shipments of stock have been of the best quality, although in rather small quantities.

Edward Bunyan of Independence, the son of E. G. Bunyan, was married June 1, to one of the charming young ladies of that city. We wish him much happiness.

Geo. Bastian, formerly of the Geo. M. Kellogg Flower & Plant Co., passed away the evening of June 2, after an illness of several months.

Mrs. L. C. Fields has completed an addition to her greenhouses, which will add greatly to her business next winter.

A. F. Burke says that he retailed 6,500 peonies besides several thousand carnations May 30. MISSOURI.

## VALLEY SCARCE FOR JUNE WEDDINGS.

Peonies are on the wane, but there is still a quantity of the later varieties coming and which supply will last out the week. Outdoor sweet peas are fine and are very popular for the commencement work; they are seen in a great variety of colors. Carnations are commencing to show the effect of the long forcing and are getting smaller. Lily of the valley was very scarce the first few days of June, the demand for wedding work using up everything in sight, with not near enough flowers to go around. Much of the select stock brought \$5. Roses were plentiful, with Beauties in good demand; in fact, for a few days there appeared to be sale for all good roses at top prices. Eastern roses find quite an outlet in this market, as the quality runs somewhat higher, the warm weather here quickly affecting the local stock. The general run of roses is still very fair, however, and prices are satisfactory for the season. There has been considerable funeral work lately, one firm alone having over 80 pieces in three days.

The bedding plant men say that business has been unusually good this season and nearly everything is sold out. Roses have sold well, there being but few salable plants seen in any of the stocks. Geraniums and all sorts of soft bedding plants sold very well. The H. A. Dreer Co. is giving a practical demonstration of the value of the hybrid tea roses as bedding plants. Fine beds 300 feet long by about six feet wide are planted with over 600 varieties of this class of rose and they contain every known sort of merit up to this date. The beds are attracting the attention of all lovers of flowers in this section, both professional and amateurs who know of them and many early morning pilgrimages (for this is the best time of day to see them) are daily made. A number of the newer rambler roses are also being tried. In addition to the display here quantities of choice flowers, carefully labeled, are sent to the city store, 714 Chestnut street and placed in the windows, where they attract a great deal of attention and many sales are made in this way, as to see such flowers creates a desire for them and many rose collections are started by these exhibitions.

Robert Craig, Jr., and Duncan McCrae were visitors at the Julius Roehrs nursery the past week.

## FLORISTS' CLUB MEETING.

"Orchids" was the topic at the June meeting of the club, June 7, Alphonse Pericat reading a paper of much interest on these popular flowers. There was considerable discussion which, incidentally, brought in several glowing accounts of the great show at Boston by Messrs. Pericat, Logan, Watson and Gould. All agreed that it was the greatest exhibition of the kind they had ever seen. Alphonse Pericat staged a number of blooms of cattleyas that flower now. There was also an exhibit of the new fern, Nephrolepis Millerii, a very pretty thing. Bowlers were notified that 30 games were to be rolled during June on Monday and Thursday evenings, those making the best averages being chosen for the team to represent the club at Roches-

ter at the convention tournament. John Westcott, George C. Watson and Robert Kift were appointed a committee on transportation to get price of tickets and various routes to the convention. Charles H. Fox, who has been very ill with typhoid fever, is, we are happy to say, out of danger and recovering rapidly.

The yellow chrysanthemums, Golden Glow, offered by the Leo Niessen Co., cause quite a good deal of comment. They seem terribly out of season, but if a supply could be maintained they would find sale on account of their size and color. Exceptional Beauty roses are also a feature here. K.

## Buffalo.

## WEATHER ERRATIC.

As has been reported in previous notes, the weather is still visiting us in every way possible, rain, cold and frost, which has made trade anything but brisk, with the exception of weddings and funerals, over which it has no control. Memorial day business was very good on Saturday and Sunday as to cut flowers, but on Monday rain was the leading attraction and fell at intervals, spoiling everything and everybody. The supply for Memorial day was none too good. Roses and carnations from the local growers were soon picked up. Lilac, which is in such demand on a day like this was very poor, owing to the rain. Irises, peonies and other outdoor stock of only fair quality were shipped in and at prices a little higher than usual, but only for the outdoor stock. The work of the park department, also landscape architects and greenhouse men, has been very much delayed. On June 1, when a straw hat should have been worn, the winter overcoat was very much in evidence.

## NOTES.

As usual, in June, weddings are always looked for by the florists, and to be in fashion one of our "younger shoots" in the business got the fever and as the story goes "George Did It." Geo. Paschka, who is the artistic window decorator for S. A. Anderson, quietly wandered away and wedded Miss Elizabeth Zimmerman. At the present writing both children are very comfortable in their cozy home. The best wishes of all are with them in their courageous undertaking.

We are sorry to hear that Robt. A. Scott is not getting on as well as expected; his knee still bothers him.

BISON.

## New York.

### WEATHER HINDERS TRADE.

Whether it is the wandering tail of Halley's comet or other celestial and atmospheric conditions that are responsible, this fine old metropolis is now passing through a streak of very peculiar weather. The morning of June 4 was cold enough for an overcoat and many were worn. June 5 was also cool with heavy rain in the afternoon. The supply of stock has been decreasing and if the demand was heavy prices would soar. As it is, good prices for this season, are being realized. The most noteworthy shortage is in sweet peas, good stock of which sells readily at \$1.25 and \$1.50 per dozen bunches. Good American Beauty roses are not plentiful and the price fluctuates between 20 cents and 30 cents each. There are plenty of tea roses to supply all demands, but on account of the cool and damp weather, considerable mildewed stock is arriving.

June 6.—There is no marked change in the condition of the cut flower market. While cool and unfavorable weather has shortened the supply, there is a corresponding decrease in the demand. If the price of some stocks have pushed up a little it is more on account of light arrivals than otherwise. There is a great amount of peony stock around and some of it is selling very cheap.

### NOTES.

The next regular meeting of the Florists' Club will be held in the Grand Opera House building, northwest corner of Eighth avenue and Twenty-third street, on Monday, June 13, at 7:30 p. m. Geo. V. Nash will entertain the club with an illustrated lecture entitled "Through Hayti on Horseback." A full report will be made by the committee on the plant and cut flower market at Queensboro

## ANNOUNCEMENT.

We beg to announce that on and after July 1, 1910, the premises on the first floor of the Coogan Bldg. will be under the management of **A. Moltz & Company, who will sell at wholesale only**, all flowers in season in addition to roses.

**A. Moltz**

**Maurice L. Glass.**

**A. MOLTZ & COMPANY, Wholesale Florists,**

Tel. 2921 Madison Sq. Open from 5 a. m. to 6 p. m. **Coogan Bldg., 55-57 W. 26th St., New York.**

bridge. As this will be the last meeting before the summer vacation, John B. Nugent, of the house committee, promises refreshments befitting the occasion.

Gretsch & Ordenez Bros. is the title of a new firm that will hereafter do business at 52 West Twenty-eighth street. Mr. Gretsch has been located there for some time and is well known as an active and energetic young man. The Ordenez brothers are importers and growers of orchids, with greenhouses at Madison, N. J. They are well known in the trade and in this new venture we trust that all concerned will make good.

The work of demolishing the old Rialto goes merrily on. The stores formerly occupied by Traendly & Schenck and Walter F. Sheridan have disappeared and sky-scrapers will soon take their places. On June 6, George Cottonas & Co. removed from 50 to 127 West Twenty-eighth street. George Saltford will also in a few weeks locate west of Sixth avenue.

P. J. Smith, as previously noted, will succeed John I. Raynor in the wholesale business at 49 West Twenty-eighth street. Having been for 18 years a trusted employe of Mr. Raynor, he is considered a clever and capable man, worthy of the cordial patronage of the trade.

P. J. Demas of the Pittsburg Florists' Exchange, sailed from this port for Europe on June 7. He will spend several months on the other side.

J. T. Butterworth South Framingham, Mass., who was among the successful exhibitors at the great orchid exhibition, was a visitor June 6.

M. Barker of the FLORIST is spending a few days in this city, on his return from the orchid exhibition at Boston.

J. Schmidt, of Baltimore, Md., was here on June 6 on a business trip.

### The Hitchings Cup of Merit.

Upon the recommendation of the exhibition committee the New York Florists' Club has decided to offer the silver cup presented by Hitchings & Co. for competition at the club's monthly meetings, commencing with the June meeting and ending with the December meeting of this year, said cup to be known as the "Hitchings Cup of Merit" and to be awarded to the exhibitor scoring the greatest number of points during the next five meetings, and to be presented to the winner at the first meeting of next year.

The club has further decided that the cup, if offered by Hitchings & Co. annually, shall be competed for in the same way as before, but competition shall commence with the January meetings and continue each month until the end of each year, the cup to be presented to the respective winners at the first meeting of each year.

New York Wants a Show.

Boston's fine orchid show reminds us that New York has few treats of this kind. We have, to be sure, the exhibitions of the Horticultural Society, constantly growing more interesting, and the yearly shows of the Rose Society, the Chrysanthemum Society and other one-flower bodies. But none of these gives the impression that there has been a full participation. The attendance at recent Horticultural Society shows, however, in the Museum of Natural History indicates that the New York public is interested. There is no reason why a building the size of Madison Square garden should

National Florists' Board of Trade, 56 Pine St., NEW YORK

Wichita, Kans.

Memorial day has kept its reputation as a busy season. Local retailers all report alike that they had all they could do. The supply of flowering plants was completely cleaned up with correspondingly heavy sales in coleus, etc. It is safe to say that there was not a decent geranium in flower unsold by Monday noon. The trade in cut flowers was also the heaviest ever. There was in the main plenty of stock, although a shortage developed in carnations, but there were plenty of roses and peonies for all calls, with an ample supply of Cape jasmine. Stock was generally of good quality and brought fair prices.

**NOTES.**

Speaking of deep wells, W. H. Culp & Co. are drawing their water by pump from the river about 1,600 feet distant. The lift is about 10 or 12 feet. A power pump and 5 h.p. gas engine do the work. They have about 18,000 feet of glass, with the usual outdoor needs for water, and the gas bill with engine oil is practically all the expense. This totals 50 cents to \$1 per month, and the water is practically as soft as rain water. It being a suburban neighborhood, the pipe line was laid through the streets same as regular water service, galvanized 2-inch pipe being used. Care was taken to keep grades as even as possible to avoid air pockets. Tight joints also were made to prevent entrance of air owing to suction in the pipes. The pneumatic pressure system is used, and enough air comes in with the water to just about meet the requirements of such a system. This firm reports that in addition to all the local trade they could handle they had a very heavy shipping trade, all retail. Their store force of 10 people worked hard all day Saturday getting out the shipping orders, the store being kept closed as usual for Sunday. In addition to the usual heavy business for the week there was a stiff call for funeral work.

The regular spring bedding trade, owing to the peculiar season, has kept up steadily since May 1, but by the end of the first week in June showed signs of slackening. Most stock is well cleaned out, and we can now begin to attend to our own planting, which was much neglected.

Geo. Speer, formerly with C. P. Mueller is back at that place after a few months vacation in the south, finding out that this city is the best yet.

Ralph Culp and Harry Mueller, each having finished high school and a business college course, have gone into their respective father's stores, looking after the books, correspondence, etc., and are already right-hand men.

Chas. P. Mueller had a good business in cemetery planting, the convenience of his plant to the cemetery making this an item worth while.

A "for rent" card in the window of F. Kuechenmeister's city store indicates its discontinuance through the summer.

W. I. CHITA.

**Davenport, Ia.**

Memorial day and the spring trade is of the past and almost every florist in this part of the country will agree with the writer that it was one of the largest ever experienced here, at least for some time past. Owing to the freezing weather up almost to May 30, we have been worked to death in getting plants out before that holiday. Memorial day itself was a hummer; the weather was pleasant enough for everyone to get out and the cemeteries were crowded all day with visitors. The retailers adjacent to the cities of the dead had all they could handle and more too, waiting on the customers that crowded the greenhouses from early morning till after dark. Several were completely sold out long before the day was over. Cut flowers were not over-plentiful and brought a

higher price than is usual for this time of the year. This was caused, of course, by the scarcity of outdoor flowers, there being practically nothing to speak of with the exception of peonies and they sold well at a stiff figure. Looking over past records one will find that this year has been an exceptional one as more business was crowded into the week before Memorial day than ever before, and, as is usually the case, several large funerals had to take place on the holiday, adding so much more additional work. Nevertheless the boys are happy now that the rush is over and are turning their attention to the building line.

### New Orleans.

Decoration day cuts a small figure down here. June 3 is the day observed here, but only the soldiers' graves receive attention and then only by means of flags and a few greens, perhaps. Bouquets are placed on a majority of the ordinary graves by friends or relatives of the deceased at least every week, so that Decoration day is only recognized as it was intended at the first, viz., a day set apart to decorate the tombs of the old soldiers who fell in the war. Outdoor flowers are rather scarce now and it has been quite a scramble to get decent stock to make up the many funeral designs of the past week. Two or three fashionable weddings this week used up quite a lot of orchids, fine roses and decorative plants. The

grower who has Cochet roses under glass is finding no trouble in disposing of them at good prices.

### NOTES.

Louis Buchner has his new grounds on S. Rampart street in fine shape. A large space is devoted to chrysanthemums and roses in the open and the balance is filled with hardy palms, privet, etc., for which he has a good demand.

J. A. Newsham has returned from the big orchid show at Boston, particularly impressed with the way Cattleya gigas is flowered by the different growers.

The Metairie Ridge Nursery Co. has demolished several of the old houses and replaced them with up-to-date structures.

Mrs. Rehm on Napoleon avenue is making extensive improvements on her place.

U. J. Virgin reports an exceedingly brisk week in weddings and funeral work.

### Nashville.

The trade has been quite active here during the past week. The school commencements, of which there were a large number, called for the best and finest of flowers. American Beauties, which were in fine shape, were prime favorites with the graduates, and there was a good sale on them. The growers were fortunate in having a very fine cut and the price realized was good, but not fancy. The Ascension lilies were abundant, outdoor grown, but the growers had a good supply of Easter lilies also, and these divided favor with the Beauties. Peonies were also just in time for the commencement season. We had two decoration days the past week. The national day, May 30, was celebrated at the National cemetery, five miles from the city on the Gallatin road. There were orations, and a flag and flowers placed on every grave. On Friday, June 3, the Daughters of the Confederacy decorated confederate circle in Mount Olivet cemetery. A profusion of flowers, in fact, wagonloads were carried out and put upon the graves of the old soldiers.

Geny Bros. had quite a misfortune in the hailstorm of last Sunday. The hail, which fell very unexpectedly, and of which there was absolutely no warning, peppered the glass, breaking 1,200 lights. Mr. Geny stood up on his porch and witnessed with dismay the destruction. The path of the storm was very narrow and the Geny Bros. were the only ones who suffered damage. Some hail fell at McIntyre's, but the stones were smaller and did no damage. For a few moments in the

..... 329 Fourth Avenue

Salt Lake City, Utah.

The cut flower business was never so good at this time of the year as it is at present. The demand was exceptionally heavy for Memorial day, and for the first time for several years the supply was equal to it and both grower and retailer had a harvest. The outlook for June is very promising with the school graduations and weddings in sight. The Salt Lake Floral Co. is sending out some good carnations and roses for this time of the year. Peonies are at their best. Sweet peas are coming in plentifully. The time has arrived for repairing benches and preparing for next season, and a crew of men can be found at each place emptying benches and

refilling same. Carnations, chrysanthemums and roses are being planted.

The Salt Lake Floral Co. has proven beyond a doubt that roses can be grown in Utah. Mr. Adams does not say much, but he can produce the goods. D. E. Law has sold his interest in this company to Wm. Wilson. Mr. Wilson will continue the business under the old name, D. E. Law retiring from the business for the present.

Robt. Miller has started on his new range of three houses north of the city. There will be no need of shipping roses here when Mr. Miller gets his new houses working full time.

UINTA.

Toronto.

GOOD BUSINESS.

Wedding decorations, funeral work and good general business have kept all on the jump. The continued cold weather keeps the supply of flowers so short that they are used up continually and not in any variety is there an over-production. Roses are in excellent quality and it is a pleasure to handle the specimen blooms which arrive; the cut is generally good, except in American Beauty, which has been scarce all season. Carnations in quality are the best and fairly plentiful, enough to fill orders, though in the cheaper grades the cut rate stores find a difficulty in getting stock. Elegant lilac is now coming in and a few belated Easter lilies of good quality are still hanging on, though storage stock is again arriving. Outdoor valley and the first peonies are here, which will soon fill the market to overflowing. There has been a decided shortage in Boston ferns and the continued high prices of palms increases the demand.

NOTES.

The members of the Gardeners' and Florists' Club were the guests of Sir Henry Pellat, where Mr. McVittie, the head gardener, had everything spic and span. It is always a treat to visit at these well conducted conservatories and favorable comments were not lacking. Impromptu speeches were given and a hearty vote of thanks for the invitation and refreshments.

Tom Manton is as usual at this season up to his neck with work but the glad hand and broad smile is still there; several good palm orders from private places and a good supply of plants help the cheerfulness.

The bedding season is now in full swing and some very creditable arrangements are seen. Wm. Jay & Son report the best season ever and find it difficult to secure stock enough for orders.

The Dale Estate, Brampton, ever enterprising, has installed a city phone,

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J., June 21-23, 1910.

THE growing crop of onion sets around Chicago is looking well, the cool weather having been favorable to it.

CHICAGO.—Contract prices on the board of trade June 8 for grass seed were noted as follows: Timothy, \$4.45 to \$4.50, nominal. White clover, from 20 cents to 25 cents.

W. S. WOODRUFF and wife, Orange, Conn., and T. R. Blakeslee and wife, New Haven, sailed June 2 from New York on the S. S. Arabic of the White Star line for a two months' trip to England and the continent.

W. J. FOSGATE, Santa Clara, Calif., writes: "Our seed crops at the present writing look well, with the exception of onion, which shows some mildew. The extent of the damage cannot be estimated until later on."

ONE of our correspondents recently reported poor prospects for the sweet pea crop. We have another report confirmatory in this direction saying that the very hot spell during the four last days in May has injured many fields of sweet peas and possibly other crops.

J. M. LUPTON, Mattituck, N. Y., writes: "The cabbage seed crop can hardly be expected to fully supply the demand, but we hope to make fair deliveries on our contract on most varieties. Danish Ballhead will be a failure, as it has nearly all rotted away, and the growth on many fields is not satisfactory, but taking the situation altogether there is now a prospect for a moderate crop of most important varieties."

At a meeting of the Western Seedsmen's Association in Omaha, May 27, a preliminary price list was adopted and it was agreed that after January 1, 1911, the terms of payment in seed stocks be made 60 days from date of invoice, less 2 per cent for cash in 10 days, instead of the present custom of June 1 terms. The association also went on record as insisting strongly that growers maintain the correct dif-

ference in their selling prices between single bushel and single pound lots and larger lots and that they do not bill single lots at the 10-bushel or 10-pound rate.

### American Seed Trade Association.

#### INTERESTING TO WESTERN MEMBERS.

For the accommodation of the western and northwestern members of the American Seed Trade Association, the Pennsylvania lines will furnish special cars from Chicago to Atlantic City for the convention provid-

He's Coming Back.

—Chicago Tribune.

ing at least 25 take the trip. In any event ample accommodations will be furnished for a smaller party.

Special rates are now in force: 30-day limit round trip to Atlantic City, with stop-over at Pittsburg, Washington, Baltimore and Philadelphia, for \$26. The most desirable train is the Pennsylvania Limited, leaving Chicago at 5:30 p. m., Sunday, June 19, arriving at Atlantic City, Tuesday at 5:30 p. m. An extra fare of \$4 is charged for this train. Reservations may be made by addressing: C. L. Kimball, A. G. P. A., Pennsylvania R. R., Chicago, or L. H. Vaughan, 84 Randolph street, Chicago.

### Connecticut Seed Crops.

S. D. Woodruff & Sons write: "The present outlook for seed crops in Connecticut is quite favorable. Beet and onion never looked better at this date, especially beet. We have a larger acreage of turnip than usual, and this also looks exceedingly well. We have

growing on our own farms the largest acreage in years of turnip, as well as kale, both of which promise at this writing an abundant crop. We have had excessive moisture, but the season is 10 days ahead of the normal, and with fairly favorable weather from this out the above crops should show an abundant harvest. The stand of sweet corn is fairly good, and first cultivating is now in progress. Probably not in years have the seedsmen in Connecticut been so closely sold out of stocks as they are at the present time, warehouses are almost absolutely empty, and it will take a whopper crop in all lines to make things easy again."

### Michigan Seed Crops.

The Everett B. Clark Seed Co., Milford, Conn., writes: "The superintendent of our Michigan branch reports that through his territory there was a period of weather unfavorable to the crop of peas about May 15, with freezing weather at night and cold winds during the day. Peas, however, are better able to withstand such conditions than drought and heat in the later stages of the crop, and we do not believe that serious damage was done to the crop by the unfavorable conditions above referred to. In May we had a report from East Jordan of a nice rain, preceded also by an equally good rain the week previous, and crops seemed to be coming along nicely."

### Wisconsin Seed Crops.

The Everett B. Clark Seed Co., Milford, Conn., writes: "From both of our growing stations in Wisconsin we have favorable reports. The Door county section was not affected by the so-called April blizzard, our farmers in that section having had sufficient experience to guard them against seeding early, to which the unusually fine weather in March tempted growers in many sections. However, although our representative had anticipated some injury to crops in his territory outside of the Door county section, he has been able to report to us now that he believes the damage to have been very small—very much less indeed than one would have supposed. In fact, he has been able to learn of hardly more than two or three crops—one of Everbearing and one of Ameer—that have been seriously injured by the April storm, and he gives us a very encouraging report as to present conditions, the weather since the storm having been as favorable as one could ask, providing frequent rains with moderately cool weather."

### Notes from Hollister, Calif.

The Pieters-Wheeler Seed Co. writes: "We have had some very hot weather the last few days, which has probably hastened the maturing of sweet peas, which are now in full bloom, but has not injured them to any appreciable extent. On the other hand the warm clear weather has completely checked the mildew which appeared on the early stalks of onions; the later stalks appear quite free from the disease, and if there are no further attacks we

The regular meeting of the Horticultural Society was held in Wiggins' hall, June 3, with a large number present and President Bennett in the chair. The regular routine of business being gone through with, the president appointed the following as judges of the peony exhibit: L. Whitman, J. Goff and M. Knapper. As the competition was very close the judges were a long time deciding, but finally decided in the following way: R. Cochrane, first; J. Campbell, second; W. Habach, third.  
W. H. Waite had some very fine muskmelons on exhibition and was awarded a cultural certificate. After the judging, a discussion was taken part in by several of the members telling how they grew peonies. H. Nichols read a very able and instructive paper on "Calceolarias," and fully explained how to grow these very interesting and beautiful plants. The executive committee reported on the June show and said all arrangements were now made to hold it on June 17, afternoon and evening, in Hollywood Inn. Louis Mililot has been appointed show manager and will make a good one, being a hustler. The secretary of the committee is W. H. Waite, superintendent of the Greystone gardens, and anyone wishing schedules or entry blanks can get them by applying to him.

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President;  
Franklin DeKleine, Grand Rapids, Mich.,  
Vice-President; S. W. Severance, 508 Illi-  
nois Life Building, Louisville, Ky., Secre-  
tary; M. L. Ruetenik, Cleveland, O., Treas.

H. J. MITTING, Holland, Mich., reports a probable scarcity of large fruits in his section but says the berry crop will be large.

CHICAGO.—This has been a busy week on the market though cucumbers and lettuce are about the only home-grown produce to be had. Celery is scarce, the Bermuda grown bringing \$8 to \$9 per case of 7 dozen. The second case of Florida watermelons arrived June 4 and Texas peaches came in for the first time the same day. Raspberries are also among the recent arrivals.

### Marketing.

Marketmen agree that the most difficult part of the business is the selling end, not the producing end. There are certainly troubles enough at the growing end of gardening, but when it comes to the selling end they are really subordinate. The selling is the most important part of the business and wants the closest attention. By this we do not mean, however, that the salesman deserves all the credit, which he sometimes claims, for no salesman can do much with inferior goods. Superior goods are easily sold, hence the two sides of the business must work hand in hand.

The greatest difficulty is found in the ever-changing market. Goods may be almost worthless one day and of fabulous value the next and vice versa. A day's neglect to push a crop to market may mean almost a total loss; on the other hand premature cutting and marketing may reduce crop value one-half. Still further, we may injure trade by selling immature or over-ripe stock, which injury may be immediate or slow to appear. We may congratulate ourselves on having made a good drive when in fact it might be better not to have sold the goods. This refers especially to selling unripe or blighted melons. We will illustrate with a few examples.

A noted greenhouse tomato grower, expecting the visit of a friend from some distance, and desiring to make as good a show as he could, instructed his men to pick lightly on Friday, so as to have a fine show for Sunday. In the meantime outdoor tomatoes came into market declining the price from \$6 per bushel to \$1.50. This incident cost this man several hundred dollars.

By the use of nitrate of soda on young spinach we succeeded in being first in our market. The first cutting was eagerly picked up at 75 cents per bushel, but owing to rainy weather we did not push the marketing the way we should. Inside of two days the glut came on with a price of 25 cents and no demand.

Greenhouse lettuce was selling at 15 cents per pound in May. One grower had a fine crop on, but his plants were too small to suit him. They averaged

four ounces each, while he figured they would gain in weight in a few days, so he held back. The result was outdoor lettuce came in owing to a nice rain and several warm nights and his last crop was worthless—would not sell at five cents.

Head lettuce cut immature proved a drug on the market, while if allowed to head up properly in another week would have realized 60 cents per dozen.

Such instances could be cited without limit. The successful man watches his chances closely and at the critical moment pushes his goods. He knows how to produce, when to sell, and also where to sell. An old motto is: "Sold and regretted is not nearly as bad as unsold and regretted."

MARKETMAN.

### Packing and Shipping Vegetables.

All fruits and vegetables should be packed and shipped in standard crates and boxes, as we will describe below, says the Southern Shipper. The advantages of using standard boxes are many. The respective sizes are best adapted to carry the different products; the standard boxes conform best with the standard weights as adopted by the railroad commission. The buyer then knows what he is buying, and the different sizes are more easily handled by express and railroad companies.

Snap Beans.—As soon as beans attain full size and the seed is about one-half matured in the pod, they should be picked; if picked before they will shrivel up and become unsaleable, if too old, too tough for use. Picking should be done every other day. Beans carry best in one-third bushel boxes or one-half bushel baskets. The express companies must take 10 one-third bushel boxes for 100 pounds.

Beets.—Beets with tops left on should be tied in bunches from three to six beets in each bunch and packed in sugar or flour barrels. The express companies must take the sugar barrels at 110 pounds and the flour barrels at 90 pounds.

Cucumbers.—After cucumbers have attained nearly their full growth they should be pulled from the vines and taken to the packing shed for assortment, discarding any which show the slightest color of yellow. For express shipments pack in one-third bushel boxes, which hold from two to three dozen. The third bushel boxes go by express at 15 pounds each. For car lot shipment we prefer the one bushel boxes containing about eight dozen each. Bushel boxes of cucumbers go by express for 40 pounds, and 50 pounds by freight. Four hundred bushels will make a car load of 20,000 pounds. All markets both state and interstate, are good on cucumbers early in the season and when properly packed and shipped cucumbers are a profitable crop.

Cauliflower.—Cauliflower should be cut when full grown, with a few of the leaves left on, then packed nicely in layers in crates 12 x 12 x 24, which go at 25 pounds and ship in crates or barrels. Cauliflower will go at the same weight as cabbage. It is advisable to make the number of dozen heads on crates or barrels.

Lettuce.—Lettuce should be cut while still tender and packed in barrels with cracked ice. Throughout the winter and spring months lettuce is in good demand at from 40 cents to \$1 per dozen heads, according to the supply. Lettuce packed in flour barrels goes by express at 60 pounds.

Watermelons.—Watermelons must be shipped in car lots only, no ice being required for watermelons. The

## Success In Market Gardening

REVISED AND ENLARGED EDITION.

A new and larger edition of this well known work on market gardening. It contains everything a market gardener wants to know, and in a form easily understood. It is an invaluable guide to any one in the business from the beginner to the most experienced.

growers of Hempstead who also make a specialty of shipping watermelons, first place a layer of hay or straw in the bottom of the car, then fill the car about half full. They also carefully assort the melons as to size and furnish the buyers with just the size they want.

### Prices of Indoor Fruits and Vegetables.

New York, June 6.—Mushrooms, \$1.12½ per pound; cucumbers, 40 cents per dozen; lettuce, cold frame, 50 cents per dozen heads; tomatoes 12½ cents per pound; grapes, Hamburgs, imported, \$1.10 per pound; Hamburgs, domestic, \$1 per pound; Gros Colman, \$1.25 per pound; Muscats, \$1.65 per pound; peaches, English, \$5 per dozen; Belgian, \$7 per dozen; nectarines, \$7 per dozen; Florida watermelons, \$1 each.

Chicago, June 8.—Mushrooms, 40 cents to 50 cents per pound; cucumbers 40 cents per dozen; leaf lettuce, 20-22 cents per box; head lettuce, home-grown, 75 cents per tub; wax beans, 75 cents to \$1.25 per box; tomatoes, \$2-\$2.25 per crate.

### Canadian Customs Regulations.

Revised regulations under the Destructive Insects and Pest act of Canada were issued on May 11, 1910. Collectors of customs are instructed to detain all articles which do not comply with the requirements of law and to notify the importer that, unless re-exported, the articles will be destroyed. The new regulations are as follows:

No plant, or other vegetation or vegetable matter infested with any of the insects, pests or diseases to which this act applies shall be imported into Canada except as hereinafter provided.

Nursery stock, including trees, shrubs, plants, vines, grafts, scions, cuttings or buds, entering Canada shall be imported only through the ports and during the periods respectively hereinafter mentioned, that is to say:

Vancouver, British Columbia, and Niagara Falls, Ontario, from October 1 to May 1.

Winnipeg, Manitoba, and St. John, New Brunswick, from March 15 to May 15, and from October 7 to December 7.

Windsor, Ontario, and St. Johns, Quebec, from March 15 to May 15, and from September 26 to December 7.

At these points of entry the importations shall be fumigated in the fumi-

gation houses provided for that purpose, and a certificate of fumigation will be issued, without which no stock may be taken out of bond. Importations by mail shall be subject to the same regulations. Provided, however, that the following vegetation shall be exempt from fumigation: (a) Greenhouse plants, with the exception of roses and other woody plants; (b) herbaceous perennials (the stems of which die down in winter), such as perennial phlox, peonies, sunflowers, etc.; (c) herbaceous bedding plants (such as geraniums, verbenas, pansies, etc.); (d) bulbs and tubers (such as hyacinths, lilies, narcissi, and other true bulbs, and also the tubers of dahlias, irises, etc.); (e) nursery stock originating in Europe.

Cottonwood or necklace poplar (*Populus deltoides*) when shipped from and grown in Dakota or Minnesota, two of the United States of America, may be admitted at the customs ports of Brandon or Winnipeg, Manitoba, and without fumigation.

The port by which it is intended that the nursery stock shall enter shall be clearly stated on each package, and all shipments made in accordance with these regulations will be entirely at the risk of the shippers or consignees, the government assuming no responsibility whatever.

All persons importing nursery stock into Canada shall give notice to the minister of agriculture within five days of dispatching the order for the same, and they shall again notify the minister on the arrival of the shipment in Canada.

Notice shall also be given to the minister by all transportation companies, customs-house brokers, and other persons importing or bringing nursery stock into Canada immediately such a consignment is received by them. Such notice shall include the name of the consignor and the consignee, the points of origin and destination, the name of the company carrying the nursery stock, as well as the nature, quantity and origin of the same.

European nursery stock, and such other imported vegetation or vegetable matter as the minister may determine, entering Canada may be allowed to proceed and shall be inspected at the point of destination, but must not be unpacked except in the presence of an inspector.

If, on inspection, nursery stock or other vegetation or vegetable matter is found to be infested with any of the insects, pests, or diseases hereinafter specified it shall be destroyed to the extent deemed necessary by the inspector and in his presence. All cases, packages, and packing in which stock has been contained shall also be destroyed in the same manner.

Any inspector entering any lands, nursery, or other premises where there is reason to believe that any of the insects, pests, or diseases hereinafter specified are or may be present shall give instructions for the treatment or destruction of any tree, bush, crop, or other vegetation or vegetable matter or the containers thereof, which may be found or suspected to be infested with any of the insects, pests, or diseases hereinafter specified, and such instructions shall be carried out by the owner or the lessee of the infested or suspected vegetation, vegetable matter, or containers thereof, and such remedial treatment shall be carried out and continued until the insect, pest, or disease shall be deemed by the inspector to have been exterminated.

Compensation not exceeding two-thirds of the value as assessed by the inspector of the vegetation or vegeta-

# Bay Trees

We have just received four carloads of fine shapely trees in the following sizes:

### Standard or Tree Shaped.

| Stem about | Crown.    | Each.   | Stem about | Crown.    | Each.   |
|------------|-----------|---------|------------|-----------|---------|
| 42-46 in.  | 24 in.... | \$ 6.75 | 45-48 in.  | 30 in.... | \$10.00 |
| 45-48 in.  | 26 in.... | 7.50    | 46-54 in.  | 34 in.... | 12.00   |
| 46-50 in.  | 28 in.... | 8.00    | 46-53 in.  | 40 in.... | 15.00   |

### Dwarf Standards.

| Total Height. | Crown.           | Each.  |
|---------------|------------------|--------|
| 4 to 5 feet.  | 24 to 26 in..... | \$7.50 |

### Pyramid Shaped.

| Height.   | Base.            | Each.   |
|-----------|------------------|---------|
| 5 ft.     | 24 to 26 in..... | \$ 8.00 |
| 6 ft.     | 26 to 28 in..... | 10.00   |
| 6 1/2 ft. | 28 to 30 in..... | 12.00   |

## BOX TREES

If wanted out of tubs we allow 10 per cent discount

### Standard or Tree Shaped.

| Crown.           | Each.  | Pair.   |
|------------------|--------|---------|
| 22 to 26 in..... | \$4.50 | \$ 8.00 |

F. O. B. Chicago. Quick shipment.

**THE PULVERIZED MANURE CO. 35 Union Stock Yards, Chicago**

ble matter or containers thereof destroyed by the instructions of an inspector, shall be granted by the governor in council upon the recommendation of the minister.

It shall be illegal to sell, offer for sale, or in any way dispose of or receive any trees, shrubs, or other plants, vegetable matter, or portions of the same if the same are infested with any of the insects, pests, or diseases hereinafter specified.

The owner, occupier, or lessee of any premises or place, where any of the insects, pests, or diseases specified herein shall be found shall immediately notify the minister, and shall also send to him specimens of such insects, pests, or diseases.

The destructive insects, pests and diseases to which the said act shall apply shall include the following: San

Jose scale (*Aspidiotus perniciosus*), brown-tail moth (*Euproctis chrysorrhæa*), woolly aphid (*Schizoneura lanigera*), West Indian peach scale (*Aulacaspis pentagona*), gypsy moth (*Porthetria Dispar*), potato canker (*Chrysophlyctis endobiotica*), parasitic diseases affecting potatoes externally or internally, branch or stem canker (*Nectria ditissima*), gooseberry mildew (*Sphærotheca mors-uvæ*), white blister rust (*Peridermium Strobi*).

The importation of potatoes into Canada from Newfoundland or the islands of St. Pierre or Miquelon is prohibited.

The minister may, upon special request to that effect, authorize the importation into Canada of any insect, pest, or disease herein specified, but for scientific purposes only.

The regulations made under the San José scale act are repealed.

## The Nursery Trade

### American Association of Nurserymen.

F. H. Stannard, Ottawa, Kans., President;  
W. P. Stark, Louisiana, Mo., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-fifth annual convention to be held  
at Denver, Colo., June 8-10, 1910.

It is reported that most of the eastern delegates to the Denver convention traveled by way of St. Louis.

THE publication by Cornell University, Ithaca, N. Y., of the "Classification of the Peony" marks the third step in the progress made in clearing up the synonymy and other work with the peony undertaken jointly by the American Peony Society and the Department of Horticulture of the above university. It is a worthy follower to the "Check List" and "The Peony" from the pen of Dr. Coit, the present work being by Leon D. Batchelor who, since Dr. Coit's departure for California in 1903, has been in charge of the peony plots here. A very large number of varieties are described and the book should be written for by all who are in any way interested in the peony.

### American Association of Nurserymen.

#### THE DENVER CONVENTION (BY WIRE.)

The thirty-fifth annual meeting of the American Association of Nurserymen opened at Denver, Colo., June 8. Addresses of welcome were read by Col. J. S. Irby and J. H. Reynolds, followed by President J. H. Stannard's address. The reports of the secretary and treasurer were received, also those of the committees on legislation, entertainment, publicity, forestry and the National Council of Horticulture.

Three hundred dollars was voted for the use of the publicity committee. The following papers were read: "The Part Nurserymen Have Taken in the Growth and Development of the Nation," by J. B. Morey, Dansville, N. Y.; "Co-operation Between Nurserymen and Fruit Growers," by W. L. Howard, secretary of the Missouri State Board of Horticulture; "The Commercial Side of the Nursery Business," by H. W. Marshall, Arlington, Neb.; "Effect of Tree Planting in the Middle West," by Geo. H. Whiting, Yankton, S. D.; "Should a Young Man Choose the Nursery Business for a vocation?" by A. Willis, Ottawa, Kans.; "Development of the Fruit Industry in Colorado," by H. G. Wolff, Denver, Colo.; "Magnifying Our Craft," by E. W. Kirkpatrick, McKinney, Tex.; "The Influence of California's Horticultural Development on the Nursery Business," by George C. Roeding, Fresno, Calif.

The following were noted among the early visitors: J. H. Stannard, Ottawa, Kans.; C. L. Watrous, Des Moines, Ia.; J. W. Hill, Des Moines, Ia.; T. V. Munson, Denison, Tex.; S. H. Kerr, Sherman, Tex.; C. A. Ilgenfritz, Monroe, Mich.; George H. Whiting, Yankton, S. D.; R. J. Coe, Ft. Atkinson, Wis.; J. H. Chase, Derry, N. H.; W. P. Stark, Louisiana, Mo.; J. H. Dayton, Dayton, N. M.; E. W. Kirkpatrick, McKinney, Tex.; H. P. Kelsey, Salem, Mass.; W. C. Reed, Vincennes, Ind.; R. C. Simpson, Vin-

# A BLUE ROSE

## The Greatest Rose Novelty of the Century

*It flowered with us this season and was greatly admired.*

The New Rambler (Violet Blue), hailed by the German rose growers as the forerunner of a genuinely cornflower blue rose, is a seedling of Crimson Rambler, very vigorous and hardy, and free blooming.

Tree Renovation by Expert Operators. Stereopticon lectures on Horticulture and Arboriculture

### The Horticultural Society of New York.

A meeting of the Horticultural Society of New York was held at the Museum building, New York Botanical Garden, June 4. At this meeting 26 new members were elected, seven of which were life members, the remainder annual members. This is most encouraging progress, and it is hoped that the increase in membership may be kept up. All that is needed is a large membership to make horticulture an important element in New York. Let all join the society, and this result will soon be accomplished. The meeting of the society was followed by a lecture by Dr. H. L. Britton, on "Summer Flowers." The lecture was illustrated with colored lantern slides.

The important feature of the meeting, however, was the summer exhibition given in connection with it. This was open on Saturday afternoon, from 2 to 6, and on the next day, Sunday, from 10 to 3. There was a large attendance on Saturday, and also on Sunday, in spite of the inclemency of the weather. A bright day would have insured a large crowd. The exhibitions of the society are becoming more and more popular and well known, and the feature of holding them on a Sunday seems to be fully appreciated by flower

### Montreal.

#### FREEZE IN JUNE.

Another bad frost on the morning of June 4 caused a lot of damage; tomatoes with a few exceptions were killed outright, also beans, corn and potatoes. The latter can be planted again but with tomatoes it is different. At this date there are no more reserve plants at hand to replace the frozen ones. Bedding was well under way but most of the tender stock like coleus, achyr-anthes and alternantheras, had not been planted except in some places, so the loss is not so severe. The fruit trees came through apparently safe as their flowering season had just finished and the little fruit that had set during the most unfavorable weather during flowering looks all right.

McKenna's had their window during the last week decorated in keeping with the death of our king. They report a considerable falling off in business. Their delivery men look smart in their new uniform. Manager Lee has bought a villa on Lake street. He will find recreation from his heavy duties with his boat, rod and gun.

Hall & Robinson do not handle any bedding plants at their store on St. Catherine street. Mr. Hall is more than busy with his other business, although orders of bedding plants are taken but filling and delivery of same is taken care of by the growing establishment in Outremont.

Another of the cut rate druggists has started to sell cut flowers. The looks of them makes one wonder why cut rate people buy such stock. The retailers complain that the growers and wholesale men supply the goods to these cut raters lower than they are able to get it.

LUCK.

### Cleveland.

#### GOOD BUSINESS.

The week's business has been very satisfactory considering the weather conditions, as it rained nearly every day. Commencement exercises in several schools here and in surrounding towns used up large quantities of long-stemmed Richmond and American Beauty roses. A few early June weddings besides the numerous deaths the past week helped to move the balance of a good supply of stock. Stock of all kinds was in sufficient quantity to meet all demands with the exception of sweet peas, which were short in supply. String smilax, Asparagus plumosus and A. Sprengeri were also a little short. Plenty of peonies are now on the market, but so far it has been mostly southern stock; local stock is expected in this week. Easter lilies that were a drug on the market all last

*Mention the American Florist when writing*

week, were in good demand and cleaned up nicely, the demand being good. Orchids are coming in daily and are being used quite freely. Long stemmed Killarney, Richmond, Bride and Bridesmaid with large blooms are coming in. The Memorial day business was a great disappointment, the cold, rainy weather being anything but conducive to good business. Those who depended on cemetery trade for this day were perhaps the hardest hit, and had it not been for the vast amount of funeral work following directly after, the stock lost would have been considerable.

### NOTES.

The Cleveland Florists' Exchange is handling large quantities of vincas and flowering plants and shrubs for outdoor planting in all sizes.

Owing to the rain on Memorial day the ball game between the retailers and wholesalers has been postponed to some future day.

Bert Cliff is back home again from the hospital where he had been operated on for appendicitis

Henry Piggott is up and around again after having been laid up with rheumatism.

C. B.

**Sprenger** ..... 15.00 per 1000

**ALBERT M. HERR,** Lancaster, Pa.

Freeport, Ill.

The Freeport Floral Co. is removing and remodeling its old plant. It is being removed to the new location where the new plant was erected last season. This, when complete, will give the company a modern, up-to-date greenhouse plant, with two 60 h.p. boilers and space for another, with vacuum system steam heating, 10,000 gallon water tank elevated on 50-foot steel tower with 2-inch mains which gives a fine water pressure. The specialties grown are cut flowers and pot plants, of which a large stock is grown for the wholesale trade, the firm shipping plants to almost every state in the union.

SOUTH LANCASTER, MASS.—E. O. Orpet leaves his position at the E. V. R. Thayer place July 1, completing on that day 20 years service. He will be succeeded by John Booth, Newport, R. I.

## Cincinnati.

Memorial day trade was admittedly far ahead of that of any previous year, all reports being unanimous on this point. The market has cleaned up remarkably well since then, all available flowers being bought up by eager buyers, and there is a scarcity of carnations and sweet peas which no doubt can be attributed to the cold and cloudy weather. A few days of sun will give us an abundance of stock to do business with. Some excellent peonies are coming in and we notice a fine lot of American Beauty roses at E. G. Gillette's wholesale house.

## NOTES.

B. P. Critchell will assume charge of the plant and floral decorations at the coming Ohio Valley exposition to be held in this city next August, and the commissioners are to be congratulated upon securing a man of Mr. Critchell's ability. Seven hundred boxes of vines and other plants and 200 18-inch hanging baskets, we understand, will be distributed throughout the building, and immense quantities of bay trees and boxwood will be used. Up to the present time we have heard nothing of the floral displays, but undoubtedly this item will be attended to. In other years floral days at the expositions always recorded the greatest attendance and the public will insist upon having them.

P. J. Olinger has purchased the interests of Peter Weiland in the firm of Weiland & Olinger. Wm. Gardner will assume charge of the greenhouses at New Castle, Ind., and Fred Brueggeman will assist Mr. Olinger in disposing of the cut at the store in this city. Mr. Weiland, who has been troubled with rheumatism a great deal of late will rest up until cured of the malady and has made no definite plans for the future.

The next meeting of the Florists' Society will be held in the club rooms, Jabez Elliott Flower Market, on Monday evening, June 13. Nominations of officers for the ensuing year will be held at this meeting.

Miss Ada Kresken left last Thursday morning for Europe to be gone for about three months and will visit France, Germany, Switzerland, Holland and Belgium.

S.

## Providence.

## BUSINESS NORMAL.

After the great rush for Memorial day business has settled down to normal conditions again. Roses are coming along in good quality and there is somewhat of an over-supply at present, consequently they can be bought at a very low price. Carnations have shortened up considerably since Memorial day but there is still enough of a good quality to supply the demands. There is an over-supply of stocks at present but lilies are very scarce. Sweet peas are coming in in good quality and a great plenty for all demands. Lily of the valley is in great demand at present, owing to so many June weddings. What orchids and gardenias come into this market are soon bought up at the regular market price. The market is over-supplied with good peonies, but they do not sell well. Gladioli are scarce at present as are green goods. There is also a scarcity of good hydrangeas and there is quite a demand for them. The weather continues cool and cloudy.

## NOTES.

James B. Canning was a very busy man during the past week as he had the decoration for the Perrin hotel opening under the new management and for the Colburn players at Brown university; also the decorations and wedding flowers for the O'Connell wedding at Wakefield, Mass.

**G. L. FREEMAN CO.**  
FALL RIVER, MASS.

Albany, N. Y.

At the regular monthly meeting of the Florists' Club F. A. Danker announced his resignation as chairman of the committee having in charge the flower show to be held in November. President Goldring thereupon appointed Frank M. Briare chairman and the makeup of the committee as follows: Fred Henkes, Frederick A. Danker, Edward P. Tracey, Patrick Hyde, Edward F. Meany and William C. Kurth. A letter of regret was read from Louis Menand, Sr., in which he explained that owing to ill health he was compelled to resign the positions of treasurer of the club and of the flower show committee. A discussion was held on the subject of the ruling of the board of education, which last year decided that no flowers should be presented to graduates upon the commencement stage. The club on motion of W. C. Kurth decided to prepare a notice for the newspapers explaining that men would be sent to the several schools in which the commencements will be held to attend to the proper distribution of flowers. In the case of the high school commencement, about the third week in June, the club has agreed to have W. S. Boardman attend to the distribution. In the cases of the other schools one or more men will be sent from the several stores.

Richard Griffith reported upon a visit to Commissioner Greenaleh of the department of public works to whom he went to complain about out-of-town nurserymen planting trees in the streets without first having obtained a permit, as the local florists are compelled to do. The matter was brought up at the May meeting of the Florists' Club. Commissioner Greenaleh promised that the matter would be looked into and the alleged abuse corrected. The club also decided to continue the Saturday half holiday and early closing, as in other summer seasons. R. W. Allen, a grower and retailer of Hudson, was elected to membership and the name of Henry Schrade, Saratoga, proposed for membership. The club accepted the invi-

# A Prominent Florist Recently Came to Wyncote and Looked Over Our Palm Houses, Including This One

He has purchased heavily from us before, and came several hundred miles to personally place his order again **this** year.

Before he left, he assured us that he wouldn't have any more imported palms. "Heacock Quality" had convinced him, and had made him a "repeat" customer.

We have on our books scores of others like him—customers who stay with us year after year because our stock has

"made good" with them and their trade and enabled them to build up a Palm department showing a steady profit.

Have you learned the advantages of handling our Palms? If not, you cannot select a better time to commence than this summer; we have an unusually fine stock just now, and can ship on short notice. Look over the list and get in touch with us by next mail.

### Cyclamen Corms in Leaf Soil.

Different growers have diverse ways of treating their old cyclamen corms after the flowering period is over. Many discard them altogether and rely upon young stock. Undoubtedly, young corms are more valuable than old ones; but the latter are extremely useful, says a correspondent of the Gardeners' Magazine. Corms one year old cannot, however, be termed old ones, yet the treatment that we wish to refer to here suits them equally as well as it does very old ones.

A bed composed of well decayed leaves rubbed through a half-inch sieve is made up in a cold frame, and the corms, after the removal of the old soil from their roots, are planted out a few inches apart in this bed. A thorough watering is given to settle the soil around them, and then the

## J. A. BUDLONG

37-39 Randolph Street, CHICAGO.

Roses and  
Carnations  
A Specialty....

WHOLESALE  
GROWER of

CUT FLOWERS

lights are put on but tilted high both at back and front, so that a current of air passes through. Watering is not done for a month or six weeks, except to prevent the leaf-soil from getting dust dry. But afterwards the bed is kept moist, and the glass lights are

put down, air being admitted only at the top, and by the middle of August at the latest splendid growth both of leaves and roots will be made, and the plants may be then carefully potted. This treatment has resulted in fine batches of plants.

## Have You Ever

Talked with a brother florist who uses Morehead Return Steam Traps?  
If not, do so at first opportunity and be convinced that you must install  
one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in  
greenhouses than of all other makes of steam traps  
combined. The Morehead is distinctly a florist's  
trap. Every feature of its construction has been  
treated with a view of meeting the special needs of  
the florist.

Write today and ask for "Trap Book."

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

### Waterside Lobellias.

The rapid spread of waterside gardening has brought many sterling groups of plants into greater prominence, and among these one notes the tall, moisture-loving lobellias. In the past lobelia culture has hinged chiefly upon *L. erinus* and its varieties, which have enjoyed a high degree of popularity as dwarf bedding plants.

But now it is the tall lobellias that call for notice, and with the prevailing taste in garden adornment, which one may aptly characterize as "natural," there certainly opens up a wide field for such decorative subjects as these. The situation "par excellence" for them is the bog garden or the waterside, where they can revel in the necessary moisture, and at the same time have the benefit of an open, sunny exposure. The same conditions which one associates with the Japanese and other moisture-loving irises will be found equally suitable for these lobellias, and, despite their character of not being quite hardy, they can be widely utilized for beautifying the water margins, and for naturalizing in boggy situations.

Some very charming scenic effects have been created by planting these lobellias extensively by the sides of lily pools, and whether grouped alone, or in conjunction with astilbes, lythrums, epilobiums, lysimachias, spiræas, bog

## The "Meyer Green Silkaline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also **Violet Thread** for tying up Violets. Price of both, \$1.25 per lb.

For sale by all first-class supply houses. If your dealer does not carry it in stock, write us direct, giving us his name.

**JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.**

## Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

**For Sale by Leading Jobbers**

Further information can be obtained from

**D. D. JOHNSON CO., Manufacturers,**  
**64-66 Wabash Ave., CHICAGO.**

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish. When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs. Ask your dealer about our **Extension Hose, Extension Rods,** and the **Mastin Whitewash Nozzle** for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

**J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.**

## Cattle Manure in Bags Shredded or Pulverized

Pure—dry—uniform and reliable. The best of all manures for the greenhouse. Florists all over the country are using it instead of rough manure.

### Pulverized Sheep Manure

Absolutely the best Sheep Manure on the market. Pure manure and nothing else. The best fertilizer for carnations and for liquid top-dressing. Unequalled for all field use. Write for circulars and prices.

**The Pulverized Manure Company**  
**32 Union Stock Yards, Chicago.**

primulas, etc., they are certainly capable of producing very satisfactory results. Culture is not difficult in the case of these subjects, but with *L. cardinalis*, *L. fulgens*, and several other of the finer hybrid forms, we would advise lifting them, and wintering them in a cold frame, but *L. syphillica* and its varieties may be trusted to take good care of themselves during the cold season, though a light mulching of littersy manure or a little bracken would do no harm.

Of the various species and varieties which are suited for the purpose in

Has stood the test of over a Quarter of a Century.

this is Nanseniana, a dwarf, sturdier form, possessing a good habit, with rich crimson flowers, and foliage of a more bronzy hue. *L. fulgens*, with its intense crimson-purple leafage and stems, and its rich-scarlet blossoms is of great value for the water-side. It is usually taller and stronger than *L. cardinalis*, and with its rich coloring makes a fine contrast to green-foliaged plants. Its variety *Gigantea* is even grander than the type. It is moulded on nobler lines, the tall, massive spikes of large brilliant-hued blossoms giving a blaze of color.

In *L. syphilitica* we have a species which has not only good qualities of its own, but has also assisted in the production of many of the finest hybrid forms. The type ranges in height from two to three feet, two and a half feet being a good average. The foliage is deep green, rough, and covered with fine hairs, and the flowers are light blue, freely produced upon leafy spikes. Its principal varieties are *Violacea*, a rich deep violet gem; *Rosea*, a bright rosy-carmine; *Alba*, a pure white, useful as a contrasting color; and *Superba*, a strong-growing rich blue of decided merit. A good companion to the preceding is the sessile-leaved species from northern China, *L. sessilifolia*. It is a strong, hardy species, about the same height as *L. syphilitica*, with leafy spikes and violet-purple blossoms.

Some of the new world lobelias are very worthy of notice, but are not sufficiently hardy to winter outside in many places. Chief among these is *L. Cavanillesi*, a Chilian species, with yellow flowers, which in good soil attains a height of three feet. Others worthy of culture are *L. laxiflora*, a pretty Mexican species, with handsomely foliaged spikes of red and yellow flowers, which is probably related to the previous species; and *L. Tupa*, a tall rarity from South America, with leafless spikes of deep red blossoms. The hybrid varieties are many, and some of the best-defined forms call for notice. It is interesting to note that the majority are of the progeny of *L. syphilitica*, crossed with *L. cardinalis* and *L. fulgens*.

A small but representative collection of these hybrids would include *Miller*, a rich purple, with grand habit; *Papillon*, a good pure white; *Gerardi*, a fine, soft, rosy violet; *Rivorei*, pretty blush-pink, with rich bronzy foliage; *Carmine Gem*, a rich, bright carmine; *Rosea* (or *Rosea Ardens*), a gloriously distinct gem, brilliant rose in color;

### An Unusual Greenhouse.

Perched on a hillside with all sorts of construction difficulties to overcome, it meets the demands not alone of being practical, but equally well the requirements of ornamentalness. The workroom is underneath—the palm house is curvilinear—the rest of the houses curved eave—construction is our Iron Frame.

## The Standard Steam Trap

Has established a record far above that of any other trap for florists; being very simple, durable and easily taken care of.

Catalogues of the Trap, Duplex Gutter, and Standard Ventilating Machinery, mailed free upon application.

**E. HIPPARD, Youngstown, O.**

Distinction, a strong-growing, rich crimson with purplish shading; *Firefly*, a glowing vivid fiery-red, and *Ibis*, rosy-scarlet, with a suffusion of salmon.

The ease with which these lobelias can be raised from seed, places them at the service of all classes of garden-lovers, and there is no reason why these plants should not rise greatly in public favor during the next few years. Plant boldly. It is the bold, free groups of the lobelias that produce telling effects. Do not be too sparing of the number of plants put out; make large groups, which will give a distinctive feature to the scene, and do not let them lack manure, for they are gross feeders.

Tarrytown, N. Y.

The regular monthly meeting of the Horticultural Society was held in its rooms on Friday, May 27, 1910, a goodly number of members being present. The monthly prize, donated by Wm. Scott, for 12 vases of hardy outdoor flowers was won by Robt. Angus, gardener for Joseph Eastman. The exhibit consisted of six lots in all and made a fine display. The finishing touches were put on the schedules for the June and fall flower shows. It

was decided to hold the summer show on June 14. These schedules are now ready and may be had upon application to Secretary E. W. Neubrand.

The matter of the annual outing was taken up and discussed, and the old committee — John Brunner, James Smith and Wm. Scott — was again appointed with power to make all necessary arrangements. Samuel C. Horn, superintendent for James Speyer of Scarborough, was elected to membership.

## Steel Return Tubular Boilers

The Most Economical Type of Boiler for Greenhouse Heating. Highly recommended by well-known florists.

**JOHNSTON HEATING CO., 138 E. 31st St., NEW YORK.**

### Ornamental Gourds.

Climbers of annual duration add considerably to the interest and enjoyment of a garden during summer, and although the principal feature of interest lies in the majority of instances in the flowers, says the Gardeners' Magazine, there are a notable few which are employed for their attractive foliage, and yet another section is admired for the ornamental character of its fruits.

To this latter class belong the ornamental gourds, whose vigorous growth proclaims them as being pre-eminently adapted for producing a screen or for quickly covering undesirable features, while the bold outline of the leaves, forming as they do a pleasing contrast to the brightly-colored and quaintly formed fruits, makes them novel features for covering such structures as pergolas, or light trellis work. The rapidity of gourd growth is proverbial, and the month of June being considered quite soon enough for planting in the open with safety, it is therefore a wise policy not to start the seed too early, otherwise the plants are starved before planting out. The end of April is a suitable time for making a start, and the seeds should be put singly in small pots containing light, rich soil, and in a gentle heat. Germination takes place in a few days, and as the plants rapidly fill their pots with roots, care must be taken to give a shift into larger pots before they become root bound, and by encouraging free and uninterrupted growth and with subsequent care in hardening off, they readily take to their summer quarters without any appreciable check.

Trained to vertical poles they are the most effective for the display of their fruits, but in this system all laterals require stopping beyond the first fruit formed, as the minimum crop is

## The Superior Standard

### RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.

$\frac{2}{3}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market

MADE IN NINE (9) SIZES FOR HOT WATER.

thus secured. When employed as a screen upon trellis work, it is generally necessary to encourage a definite number of these lateral shoots, and to this end, the lead should have the point pinched out when the main shoot has attained the desired height.

Gourds delight in a light, rich soil, consisting of equal parts of loam, leaf-soil, and well-decayed manure, and during the summer months frequent supplies of water with the drainings of the cow-house, or some approved fertilizer, applied at frequent intervals, promotes luxuriant growth and materially assists in the development of the fruits, while it often prevents the plants from an attack of mildew to which the foliage is very susceptible in periods of drought.

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

### Concrete Benches.

The subject of benches is always a vexed one and some growers still cling to the idea that there is some remarkable property in wood that gives vigor to the plants, or at least that concrete benches are for some reason unsuitable. It is only necessary to go into some up-to-date place where concrete has been used and to see the excellent stock grown on these benches to refute that. Often when building operations are in progress there is a rush to get the benches up and planted and wooden benches can be fixed in half the time necessary to build concrete ones. But this does not alter the fact that the latter are eminently suitable and satisfactory for every class of plant grown. Wherever houses are to be built everything should be in readiness before hand, the benches as much as anything else. There are many different patterns used and, provided the material is sufficiently reinforced to stand the strain, one is probably as good as another. But, besides what may be termed portable benches, a cheaper form is the solid concrete bed and this has been used with great success in many places. Here it is imperative to wait before planting but much can be done to forward matters by having all planks and other material ready for the forms and a sufficient quantity of cement and filler ready so that no time is wasted when ready to go ahead. When these benches are once built they are there to stay, being practically indestructible and needing no repairs. Here is where they have the advantage over wood, which, no matter what quality of lumber is used, requires renewal or repairs after a few years.

COMMERCIAL.

### Wright "Victor" Steam Traps.

The Wright "Victor" low pressure continual flow steam trap is designed and constructed for use in all steam systems where the pressure ranges from nothing up to 20 pounds, which adapts it admirably to use in greenhouse heating systems. A large valve opens as the float rises with the incoming condensation and discharges the water regardless of whether the flow is very minute or of flood proportions, without steam waste in the operation.

The very simple nature of the device, together with the fact that a water seal at both inlet and outlet prevents any possible steam waste, makes it especially attractive to the greenhouse operator who is looking for the most effective but non-complicated mechanical device for this or any other purpose he can possibly find. The "Victor" trap is made and sold by the Wright Manufacturing Co. at Detroit, Mich., with the distinct understanding that it must prove highly efficient and satisfactory under

# High Quality Not High Prices

Whenever we make a piece of material it is our aim to turn out the very best that can be produced; high quality is our object for nothing else will satisfy the man who wants to build a greenhouse and make a success. There can be no success without this striving after quality; without there be an effort to produce something better than was produced before. The man who believes in selling poor stock, low class goods, and gets what he can for his work, never progresses or succeeds permanently. We are working hard to make our construction more modern, to improve our patterns and our methods of manufacture, we must keep up with the times and stand at the head of the procession or drop out of the line. Prices are to be considered of course, in everything, but it's quality that counts after all. You forget the price but you don't forget the quality—

It's not what you pay but what you get for what you pay—that is economy.

proper installation or be returned to the makers at their expense of transportation both ways.

### Handy Handbook of Greenhouse Materials.

The "Handy Hand-book of Greenhouse Materials" is a little catalogue published by Lord & Burnham Co., New York and Chicago. But it is more than a catalogue. There is a lot of very useful information in it and it is full of interest to those who are thinking of any building or alterations to houses, whether they are users of the Lord & Burnham specialties or not. All classes of greenhouse construction are shown and the component parts are shown in detail by distinct and easily understood sectional and other drawings. There are useful tables for finding boiler capacities, comparisons of pipe surfaces and copious instructions as to the management and upkeep of boilers. The automatic pipe head and air vent is a simple but effective method of doing away with air cocks, vertical pipes or anything else at the higher portions of a heating system. It is arranged for the ordinary coils and for overhead heating in different patterns and the price is low enough to bring it into general use everywhere. Every kind of fitting, either for greenhouse

construction or heating is fully described and illustrated and it is as its name implies a mighty "handy" book to have around.

### Greenhouse Building.

Greenwich, Conn.—Estate of R. A. C. Smith, Field Point park, one greenhouse and one palm house.

Scranton, Pa.—Ira Marvin, one greenhouse 11 x 68 feet.

Allentown, Pa.—John H. Sykes, one greenhouse.

### South Bend, Ind.

Business for Memorial day was unusually heavy although it was anticipated by many buyers who had orders in days in advance. Growers and retailers, with the kind assistance of the weather man, also anticipated the demand with generous supplies of flowers of all kinds, and this, together with good prices, made the day a pronounced success. Outdoor peonies and narcissi, notwithstanding the "bear stories" of our neighbors, were here in quantities, the former retailing at from \$1.50 per dozen and up. Even lilies were impressed into service and sold well. Cape jasmine is becoming popular here as a Memorial day flower and retailed at 50 cents per doz., and there was a fair demand for pot hydrangeas and spireas.

**MASTICA**

## HALF HOUR CHAPTERS FOR PLANT GROWERS

### Begonias.

The tuberous rooted begonias are now rapidly advancing for flower and should be arranged in a cool light house with sufficient shading to break the hottest rays of the sun. Keep them well apart and water carefully. There may still be a little thinning of the shoots necessary for the later plants and the shoots on the earlier ones will probably require a little support. A few small neat stakes and ties are all that is necessary and these will be completely hidden as the foliage develops. The Gloire de Lorraine section will not be growing very fast as yet and all that is necessary is to keep them clean and avoid overwatering, stirring the surface soil occasionally. Many of the winter flowering shrubby species can be propagated by cuttings now. They root easily in the ordinary cutting bench and will make nice little stock for winter and early spring. The Rex varieties may also be propagated freely now, either by cutting up the stems into lengths of about an inch or by means of the leaves. The various types of begonias are interesting and showy plants, of which there is seldom an oversupply, as they are useful in such a variety of ways.

### Rambler Roses.

Any left over plants of rambler roses that are healthy should be kept inside and allowed to finish their growth. They will be far better for early forcing next season than plants lifted from the open or imported stock. If they are in small pots a shift may be advisable, using a good, sound, loamy soil and ramming it in the pots firmly. Place the plants at a fair distance apart and keep them well sprayed daily. Encourage the growth of the long, cane-like shoots rather than the smaller spray. If a bush form is desired the shoots may be pinched to form it, but a natural shaped plant is best usually. A cool, airy house or frame suits them best, and as soon as the growth is ripening up a little they can go outdoors, the

pots being plunged in ashes to their rims to keep the sun from the roots. Water freely at all times and give occasional waterings with liquid manure. By the fall the growths will be hard and have vigorous buds that answer readily to a little heat and will make elegant stock for winter sales. Any of the varieties may be treated this way, though the old Crimson Rambler, Dorothy Perkins, Lady Gay and Hiawatha are among the easiest to force. Tausendschon does better if allowed to come along more slowly, but the summer treatment is the same for all.

### Cyclamens.

Cyclamens are now, or should be, at the height of their growing season, and the utmost care is necessary that nothing in the nature of a check to growth occurs. From this time on the cyclamen needs a more or less heavy shade and a moist atmosphere. In dry, sunny, arid houses or frames the plants simply exist; the growth is slow and weak, nearly always insect infested and generally unsatisfactory. But in a correct growing atmosphere the plants thrive, producing large, vigorous foliage that insures fine, healthy crowns being finished up for flowering later. There is usually plenty of room at this season and the cyclamens of all sizes should, if possible, be put into a clean house and given a stand on clean benches. Ashes, shingle or some other moisture holding material should be placed on the stages, as this is better for the plants than standing on a dry wooden stage. They should be given plenty of room to allow for spraying between the pots several times daily, this maintaining the requisite atmospheric moisture around them that keeps thrips and other insects in check. A sharp lookout must be kept for insects of all kinds and, wherever a leaf is seen turned, examine it; it will probably be found that spider, thrips or green fly has taken possession. Such leaves should be removed on sight, as they will never be any good

to the plant, and when they are seen it is a sign that insects are likely to become more troublesome, so fumigate lightly on two or three successive evenings to put an end to them. Light spraying, with the finger on the hose connection or syringe, underneath the leaves is a far better plan than spraying heavily overhead, as is sometimes done. It has a better effect on the plants, does not sour the soil and the moisture in the atmosphere can be kept up just as well by dampening the floors and between the plants on the stages. Shifting the young stock on in all sizes should be regularly attended to. Never allow the plants to become hard in the pots, as this causes a check to growth, while the shift must not be given too early or the roots will have too much soil around them, rendering correct watering difficult. While a reasonable amount of air is necessary, the shading will keep the house fairly cool, so avoid draughts should cold winds occur.

#### Cleaning Up.

Although in a well regulated plant-growing establishment there are never any empty houses for long, yet after the bedding stock and Memorial day plants are all cleared out and the stock of greenhouse plants that need this attention taken to the open air, there is considerable of a hiatus, and that is the time usually chosen for a general clean up. It is the one time of year when a house can be thoroughly cleared for, even if there are a few plants in it, the weather is usually warm enough for them to be taken outside and a little shading put over them, or to a shed while the cleaning is going on. The first thing to do is to thoroughly hose down every portion of the house, roof, stages and all, and to keep it wet while scrubbing the glass, sashbars and other wood work and so driving out any spiders or other insects that, during the winter season, have made their homes there. The benches will be next to have attention, any repairs necessary being carried out and all thoroughly scrubbed. If there is any rubbish around under the benches let it all be raked out and all old pots or any other litter taken clean away. At the same time see if any leaks in the pipe joints exist, and if so have them fixed. Attend to any valves that may be stuck, see that the ventilating gear is oiled and in proper running order, and place fresh ashes or shingle on the benches. When all is complete leave full air in the houses for a couple of days and nights and, before placing any stock back on the benches, sprinkle a little soot and lime on the surface of the benches and all around underneath. Then see to it that all plants as they are returned to the houses are clean and free from insects, and as good a start as possible for next season will have been secured.

GRAND FORKS, N. D.—Business has been good all through the spring months and we cannot get enough stock. All the local flowers were ruined by the heat in March, followed by ice and snow later.

## THE RETAIL TRADE

### Attractive Home Wedding Decorations.

SEE SUPPLEMENT WITH THIS ISSUE.

Home weddings form at once a profitable work for the retailer and a chance for him to show his skill. A fine decoration carried out recently at Washington, D. C., is a case in point. In the parlor, where the ceremony took place, was arranged a canopy of southern smilax, interspersed with clematis and Bride roses, and showered with the same flowers. A group of plants, arranged to form a semi-circle, was used in connection with the canopy. The mantel arrangement was of maidenhair fern plants, interspersed with white roses, clematis hanging over the edge of the mantel. The chandelier was decor-

Bridal Bouquet of Orchids.

ated with *Asparagus plumosus*, interspersed with white roses.

The library mantels and the chandelier were decorated with pink roses. The dining room mantel was treated with pink roses, maidenhair ferns and clematis, the centerpiece being made of Killarney roses and lily of the valley. On the chandelier, asparagus and pink roses were used. The arches over the stairways and the balustrades were decorated with southern smilax. A cluster of hydrangea and clematis vine was fastened with white satin ribbon to the newel posts. Southern smilax was used over all doorways, and wherever it would lend to the gracefulness of the entire decorations.

#### Orchids for Bridal Bouquets.

The wide-spread popularity of cattleyas somewhat overshadows the many other beautiful orchids in general decorations, but in bouquet making, if a graceful and telling effect is to be produced, other varieties and species must be added. Cattleyas of the labiata section alone, no matter how well arranged, are inclined to be flat in effect and there is also a good deal

of sameness in their color. Old time florists will recall in this connection the pretty *Oncidium flexuosum* with its light, airy scapes of pure, clear yellow flowers on wiry spikes and individual flowers stalks so light that they were almost invisible at a little distance. It was seen in almost every bouquet and epergne decoration in the old days, and it is doubtful if there is a more elegant little flower in existence for the purpose today.

Other *oncidiums* that occur to mind as suitable for this class of work—that is to stand up from the body of a bouquet, are *O. incurvum*, a pretty pink flower, *O. phymatocilium* (dancing girls), *O. phymatocilium* and its white variety and *O. altissimum* and *O. sphacelatum*, the two latter bright yellow with brown markings. All these *oncidiums* last extremely well, are very bright and telling and easy to handle. For associating with cattleyas some of the larger flowered yellow *oncidiums* are fine, such brightly tinted species as *O. tigrinum* and its varieties, *O. Marshallianum*, *O. varicosum* and the pretty little *O. concolor* being among the best of these. The *phalaenopsis*, or moth orchids, are exquisite for the purpose, especially *P. amabilis*, *P. Schilleriana*, *P. Stuartiana* and *P. grandiflora*. These beautiful species, obtained fresh and used while still in good condition, are among the choicest and most suitable species for the purpose in the entire orchid family.

The *epidendrums* are to some extent looked down upon by orchid growers, yet this genus comprises some elegant species for cutting. Bright scarlet orchids are by no means common, but in *Epidendrum vitellinum* and its variety *majus* we have flowers only rivaled in their richness of coloring by the glowing *Sophranitis grandiflora*, the brightest colored commercial orchid in existence. *Lælia harpophylla* and *L. cinabarina* are other orchids possessing this color. Harking back to the *epidendrums*, what could be more beautiful than *E. bicornutum*, a waxy white flower, lasting long in perfect condition, but, unfortunately, not easy to grow and, for this reason, not likely to ever become very popular? In their season the deciduous *calanthes* are among the best and showiest orchids for cutting and well suited for use in bouquets. *C. vestita* has white flowers with red (*rubra oculata*) or yellow (*lutea oculata*) blotches in the center. *C. Veitchi* has pink self-colored flowers, and there are many varieties of each. These beautiful species and hybrids are at their best during November and December.

There are hosts of other orchids, *denrobiums*, *cyripediums*, *vandas*, *cœlogynes*, *odontoglossums*, *miltonias* and many others all more or less useful for the purpose indicated and flowering at all times of the year. Retailers who have this class of work on hand should get after their growers and try to get them in line to keep up a regular succession of these flowers. It is easily done if they will take the trouble to do it, and the demand, already existing, would in a year or two be doubled. For use with orchids no fern or other green can compare with *Adiantum Farleyense*. The soft green of the fronds and its full yet grace-

A PRETTY HOME WEDDING DECORATION.

CHURCH WEDDING DECORATION BY DYER, PORTLAND, ME.

ful appearance seems to suit the somewhat neutral tints of most orchids, especially the soft mauves and yellows, and it should be used freely. Small sprays of *Asparagus plumosus*, stemmed and used among the smaller flowers are also exquisite and very fine fronds of *Adiantum gracillimum* placed over cattleyas and other large flowering orchids are like a light veil over a beautiful face, partially concealing while it heightens its beauty. This latter must not, of course, be overdone or the effect will not be good.

#### A Portland Wedding.

The Curtis-Merrill wedding, which unites two of the city's oldest families, took place at St. Laurence church, Portland, Me., June 7. The decorations were carried out in an artistic and original manner by A. W. Dyer and were favorably commented upon by the papers of that city. From the boxwood trees placed at the entrance to the canopied aisle to the altar, the entire decorative scheme was carried out to conform to the architecture of the church. The colors were pink and white and at the ends of the pews great baskets of pink sweet peas were tied with broad gauze ribbons in a very delicate shade of green. At the altar the great bank of hydrangeas, white sweet peas, spirea, ferns and the huckleberry vine, gave an unusually beautiful effect, the decorations done

in such a way as to present a solid bank of pink and white blooms. The altar rail instead of being the ordinary church rail was of maidenhair fern and white sweet peas and was as artistic as it was original. The bride's bouquet was a shower of valley, while the maid and matron of honor carried Killarney roses. The decoration for the wedding supper at the summer home of the bride's parents was a simple arrangement of Richmond roses.

#### Weddings at Albany, N. Y.

Weddings have kept all busy for a week or two past. Perhaps the most notable of these functions was that of Francis P. Garvan, a former assistant district attorney of New York, and Miss Mabel Brady, daughter of Anthony N. Brady, of this city, which took place in the Cathedral of the Immaculate Conception on the morning of June 9. The floral decorations in both cathedral and home of the bride's parents were in charge of Eyres. In the decoration of the cathedral 300 palms, 600 yards of laurel roping, 300 ropes of asparagus, 2,000 white peonies and 1,000 Easter lilies were used. The laurel festooned the organ loft, the side pews, and in long sweeping lines connected the pillars. The palms were clustered about the chancel, formed screens which cut off the view of the two side altars and were grouped about

the pulpit and the bishop's throne. The peonies were formed into clusters, tied with broad white satin ribbons and stood like torches along the pews of the center aisle and suspended at a height sufficient so as not to cut off all the front view. The Easter lilies decorated the clergy stalls, the altar rail, the large branch candelabra, and filled many tall white vases placed at points about the chancel, before statues, and on the side altars.

At the house, 411 State street, where a reception followed the wedding, there was apparently no limit to the expenditure for floral decorations. The fireplace in the foyer was filled with white peonies in conjunction with ferns, and each panel traced with asparagus had a pendant cluster of peonies. At the entrance of the stairway, a bower of palms screened the orchestra from view. Twelve newel posts in the ascending staircase had immense clusters of Richmond roses, and the balustrade was wound with asparagus. Eight hundred cattleyas and miltonias, all in shades of lavender, converted one room into a bower of tropical loveliness, and lily of the valley and Killarney roses banked mantels and mirror in the large reception room and adorned all electroliers about the walls. In the library, yellow marguerites and snapdragon were used in baskets along bookcases, and the mantel was a solid banking of Sunset roses. Vases of

snapdragon about the room completed this scheme.

In the Japanese room yellow and purple iris were combined effectively with asparagus. A large centerpiece of American Beauties occupied the center of the dining table and in the conservatory cozy corners were placed

Fig. 1.—Cuttings Mossed Too High.

all about. Everywhere the choicest palms and ferns lent their relieving green.

On June 8 The Rosery had six house and church weddings, which is a record for one day in this vicinity.

R. D.

#### Pretty Wedding at Hinsdale, Ill

A beautiful wedding was solemnized at Hinsdale, Ill., June 11, between Miss Mabel Madden and Paul Henderson, at the home of the bride. The wedding was on the lawn under a big pine tree, the same tree that the bride's parents were married under 32 years ago. The decorations were carried out by Bassett & Washburn's retail department of Hinsdale, and consisted of a canopy of smilax under which the happy couple were united. Palms, ferns and other plants were used in great profusion and about 1,000 Killarney roses were needed, all being supplied from the firm's greenhouses. It was a gala day at Hinsdale, large numbers of automobiles coming out from Chicago bringing the 400 guests that were present at the reception. The house was also decorated with Killarney roses, this also being carried out by Bassett & Washburn, as were the bride's and bridesmaids bouquets. The former was made of lily of the valley and white roses, the latter of Killarney roses. C. L. Washburn supervised the whole decoration and worked hard at it himself, and the whole thing was immensely successful and in such a beautiful setting that great praise was showered on Mr. Washburn by all concerned.

## CHRYSANTHEMUMS

ALLOW no weeds on the benches as they are sure to lead to green fly attacks.

SEVERAL varieties are giving unusual trouble this year by persistent premature bud formation.

WATER around the plants only for a time after planting, not the whole of the soil. This helps root action considerably.

FUMIGATE lightly several evenings in succession to get rid of the black fly. If allowed to remain on the plants they will be crippled and good flowers need not be looked for.

#### Rooted Cuttings.

A few weeks ago we offered a few suggestions regarding rooted cuttings, which will be found on page 621, issue of April 23. There are several ways to wrap and moss cuttings, all of which are satisfactory for shipments to be transported a short distance, but when they are to be several days in transit every precaution must be taken to ensure safe arrival. Moss is the material used to hold moisture and keep them from wilting, a condition very important to their welfare. This moisture should be confined to the roots and adjacent stems rather than the leaves.

Fig. 1 shows a bundle recently received, in which the cuttings were bunched, the moss (instead of being confined to the roots and lower stems) extended up against the leaves. To make a bad matter worse, the wrapper (heavy waxed paper) was so placed as to nearly cover the cuttings their entire length, thus excluding the air and retaining the moisture. As previously stated such conditions are of no great consequence for short haul shipments, but are of special importance where several days are consumed in transit.

If they are packed upright in slat top boxes the situation is somewhat relieved. The two materials used to retain the moisture should as far as possible not come in contact with the tops of the cuttings. Moist roots and dry tops are the most favorable conditions. The excessive moisture retained in the foliage and aggravated by the exclusion of air is very apt to cause them to heat and decay.

Fig. 2 shows the same bundle properly mossed. It will also be noticed that the cuttings are placed higher on the paper, so when wrapped their tops will be free to the air. In the methods described above the cuttings are brought together in the hand into a bundle to which the moss is applied. We believe there are some advantages in adopting the method shown in Fig. 3. Here the moss is placed on the paper and the cuttings placed thereon near the left hand side of the sheet, so they extend some six or eight inches. The portion extending below the cuttings is then brought up with the moss and pressed down against the cuttings (as shown in the illustration) and is then rolled into a bun-

dle as shown in previous article referred to. This method gives the cuttings a little more freedom and they are not so liable to damp.

Some use this method, wrapping very loosely, which is satisfactory when packed close, but they are inclined to dry out quickly if packed open, owing to the free circulation of air which extends even to the roots. For long shipments those wrapped rather firmly and, after danger of frost is over, packed open (slat covers) usually reach destination in excellent condition. The condition of the cuttings have much to do with their safe delivery. Those that are soft are the first to succumb from being too wet and close, or from dryness. All shippers of these plants in miniature are more or less confronted with the problem of how to perform these details to ensure safe arrival and it is therefore wise to consider the distance to be transported in adopting a practical method. The short hauls are easy and the long ones are often difficult, especially when the temperature is high.

ELMER D. SMITH.

#### Care of the Young Stock.

The early propagated stock for exhibition cut blooms intended for bench culture should have its quarters got ready without delay. The sooner it is planted into the beds the better. Chrysanthemum plants quickly get beyond control at this time of the year if not shifted or planted on as they require it. The head room necessary for the proper development of this early planted stock is one of the most important points to consider. They should be allowed from eight to ten feet. Any cleaning of the woodwork,

Fig. 2.—Cuttings Mossed Correctly.

painting or repairing should be finished before any planting is done, it being a great deal easier to do this work before the plants are in than after. To grow first-class exhibition blooms the plants must be treated

liberally in the way of good rich soil but an overabundance of fresh animal manure should be avoided owing to its tendency to promote a soft, long jointed growth. For light soils a mixture of three parts well rotted sod, one part well rotted cow manure and one part of a good soapy clay to stiffen it up makes a good compost. But for soils that are of a stiff clay substance three parts of soil to one of manure will be all right. This should be thoroughly mixed and broken up before bringing on to the benches.

Provide ample drainage at the bottom of the benches for the water to run away freely and to allow for the soil to dry out within a reasonable time. A little of the rough part of the soil can be spread over the bottom of the bench to prevent the finer soil from running through. Five inches of soil after it has been firmed down is deep enough to grow any of the exhibition varieties. At the time of bringing in the soil add a dressing of bonemeal to the surface and thoroughly work it in with a spading fork or a long-tined hoe; then give the bed a good firming down and level off the surface, after which it is ready for planting. Plant this early stock not less than eight by ten inches, though this can be modified a little if by closing up a little another row can be got across the bench. After planting, water the soil around the plants only until the roots get established. Syringe the plants two or three times a day to keep down the temperature and promote active growth. Arrange the varieties together as much as possible according to their height of growth so that the tall growers will not shade and crowd out the dwarf varieties.

If there are any cuttings still in the sand intended for late plantings they should be potted as quickly as they make roots so that there will not be any danger of their getting hard and woody which quickly occurs at this time of the year. The large specimen plants being grown for exhibition as bushes and standards will require constant attention right along now. Pinching back the shoots is a very important point and it is necessary to go over the plants every three or four days to keep them in hand. Watering these large plants needs considerable judgment to keep up the active root action at all times. A little too much water will quickly cause the plants to take on a yellow cast and check root action. In cases of this kind the water should be withheld for a few days and the plant allowed to dry out a little to promote root action again. It is equally detrimental to the plants to allow them to wilt down for the want of water. Just at this time spraying with nicotine or some other preparation should be followed up every few days to keep down black and green aphids, which are now particularly active.

C. W. JOHNSON.

READING, PA.—More than 140,000 plants are being set out at the stations of the Lebanon Valley & East Penn. railroad. The Philadelphia & Reading road's gardeners are also busy planting out.

### Striking Features of the Nursery Trade During the Past Quarter Century.

BY PROFESSOR JOHN CRAIG, CORNELL UNIVERSITY, ITHACA, N. Y.

The evolution of the nursery business during the past 25 years is marked by many features of great interest to the student of plant history and economics. One has but to compare the catalogues of 25 years ago with those of today to find indisputable evidence of the profound change in product, variety and method of handling.

#### THE MIDDLE WEST.

Twenty-five years ago the great middle west was beginning to find itself as a fruit growing country. The more favorably situated regions were planting Ben Davis and Winesap; the orchards of southern Illinois, southwestern Iowa and eastern Kansas were being planted. Wellhouse of

foreigners and opposed their introduction on principle; and the camp of neutrals who professed no opinions but were willing to take the good things the gods gave them without reference to their source. When Professor J. L. Budd of Iowa, the champion of the Russians, passed over to the majority the discussion gradually simmered down till it disappeared entirely. At the present time the country is reaping the benefit of the invasion of the Russians and east Europeans in the second crop of hybrids now appearing, and seedlings, many of which are superior to either of the originals, native or imported: And so in the long run the good prevails.

Twenty-five years ago, nurserymen of the middle west carried long lists of forest tree seedlings to supply the needs of the men who took up prairie claims under the provisions of the timber act. The cottonwood, the box

FIG 3.—CHRYSANTHEMUM CUTTINGS MOSSED READY TO WRAP.

Kansas was setting the pace in orcharding in that state while Silas Wilson of Atlantic, Watrous of Des Moines and Youngers & Co. of Geneva, Neb., were turning out root grafted apple trees by the million.

#### RUSSIAN APRICOTS EXPLOITED.

At the same time the surpassing beauty and indescribable qualities of Russian apricots and Russian mulberries were being heralded by certain Nebraska nurserymen who found these treasures in the settlements of Russian Mennonites in that state. The Russian apricots have come and mostly gone—Skobeloff Alexis and Catherine have gone to obscurity—but the Russian mulberry (sold in pairs at \$5) remains to give shade and furnish a plentiful supply of bird food during early cherry season. In this respect it fills an important mission in some districts. About the same time there raged in the middle west the historic controversy over the merits of the Russian apple. Nurserymen were divided into camps, the pro-Russian, who saw the salvation of the country in the introduction of the hardy Russian varieties of apples; the anti-Russian, who saw no good in the

elder and soft maple were staples. Nurserymen still grow forest tree seedlings but the quality of stock as to variety and grade has greatly improved. More discrimination is shown both on the part of grower and planter. Conifers are receiving a larger share of merited attention while the cheap tree is more often grown for temporary purposes. Twenty-five years ago the floricultural establishments of the middle west were small and primitive affairs. Today one may find florists at Missouri river gateways shipping to Denver on the one hand and Buffalo or possibly New York on the other.

#### FRUIT AREA IN PACIFIC NORTHWEST.

Nine years less than a quarter of a century ago the Pacific northwest drew the eyes of the world to the possibilities of fruit growing west of the Selkirks and Rockies by its magnificent display of orchard products at Chicago's great exposition. Since that time nurseries have been developed in this western empire capable of meeting the demands of the rapidly extending orchard areas. This region affords an unparalleled example of rapid and successful development of

deciduous fruit orcharding in the United States, if not in the world.

#### THE KIEFFER AND ITS BRETHREN.

Twenty-five years ago saw the introduction of the Oriental pear and its hybrids, saw its propagation by the hundreds of thousands, its large planting in the middle south—where it properly belongs—and its profound influence on pear culture in the middle Atlantic and the gulf states. The close of the quarter century saw nurserymen dropping Kieffer and its relations and hustling the propagation of Bartlett and others of European extraction. And so the pendulum swings one way then the other. The period covered by the AMERICAN FLORIST includes the era when the Japanese plums were in high tide favor. They are still propagated and planted, but with much more discrimination than formerly. The greatest good will come from the mixed descendants of the race rather than the pure blood, and so with our native plums. They are in a state of directed evolution. The next stage will be better than the last.

#### DEMAND FOR ORNAMENTALS.

In the last 25 years the most striking change in the nursery business lies in the greater emphasis now being laid upon the propagation of that class of plants which does not cater to the truly economic demands but rather to the aesthetic needs of roadside, of lawn, park and cemetery. Ornamentals are imported, propagated and sold in thousands today as compared with hundreds a few years back. Nurserymen have their own landscape departments (much to the disquietude of the landscape architect), grow material and execute plans as a matter of course.

#### ORGANIZATION OF NURSERYMEN.

Finally in matters of organization nurserymen are vastly more united than formerly. Organization enables them to take a hand in tariff revision (not necessarily down), in regulation of state and federal laws for the control of nursery pests, for the regulation of interstate trade, freight rates and the like. They have not approximated perfection in these regards but they are making substantial progress. In looking over this period and noting the place of the nurseryman in it one cannot fail to be impressed with the great influence he exercises upon development of country and even urban life. Show me a region tributary to a nursery establishment operated on intelligent and broadminded principles and I will be able to point out the beneficial advantages which have been derived from its presence. It has been so in the past; it must be so in the future for the scope and opportunities of the plantsman are constantly widening.

MAYNARD, MASS.—Albert Batley & Son are to add another greenhouse to their range on Acton street.

OAKLAND, CALIF.—While boring for water, oil was discovered on the property of H. M. Sanborn, 517 Fourteenth street. A derrick and pumping outfit is being installed.

## AMERICAN ASSOCIATION OF NURSERYMEN THE DENVER CONVENTION

#### Election of Officers.

At the thirty-fifth annual convention of the American Association of Nurserymen held June 8 to 10, at Denver, Colo., the early sessions of which were reported in our last issue, page 970, the following officers were elected for the ensuing year:

W. P. Stark, Louisiana, Mo., president.

E. S. Welch, Shenandoah, Ia., vice-president.

John Hall, New York, secretary.

C. L. Yates, Rochester, N. Y., treasurer.

Professor John Craig:

Executive Committee—J. H. Dayton, Ohio; E. M. Sherman, Iowa; W. B. Chase, Alabama.

St. Louis was selected as the place of meeting for 1911.

#### Effects of Crown and Root Gall.

Two papers that aroused unusual interest were: "The Effect of Crown Gall Upon the Orchard," by Peter Youngers, of Nebraska, and "Root Gall," by E. A. Smith, of the Jewell Nursery Co., Lake City, Minn. Mr. Smith, in his paper, said: "Cut or injure the root of any tree or plant and there will frequently be found at the point of injury, a hard incrustation which is known as root gall. This, we think, is largely due to an excessive flow of sap in response to the mending processes of nature. The spring time will cause an increase of sap to flow and escape from this wound, and in nature's effort to heal it, or check the escape of the sap, a hard, knotty incrustation is formed. Does root gall signify disease? Practical experiments beginning in the spring of 1905, consisting in the planting of several hundred trees affected with the worst form of root gall, side by side with trees not affected, showed at the end of five years that the root gall has not affected the health, vigor or growth of the trees; that hard or hairy root gall

is not contagious; that the tendency of this class of root gall is to become absorbed by the tree until it disappears entirely. Mr. Youngers cited similar experiments with reference to the effect of crown gall, and produced data collected from various parts of the country to the same effect, namely, that the disease is not contagious and in the majority of cases not injurious to the tree affected.

A lively discussion followed, in which some of the inspectors present differed in their views from those of the essayists. Mr. Harrison, of Nebraska, said: "I think the proper name for those root galls is 'warts', and it is just as reasonable to kill a boy because he has warts on his fingers, as to kill these trees because they have root gall." The following resolution was finally adopted as expressing the view of the majority of the convention:

Whereas, The hard or hairy form of root or crown gall by practical experiments has not been found injurious or contagious to apple trees;

Therefore, Be it resolved—that we, the American Association of Nurserymen of America, do hereby protest against and condemn the action of state legislatures in refusing to grant certificates of admission and acceptance of apple trees in their respective states because of the presence of hard or hairy form of root or crown gall, and we hereby urge upon the legislatures, their agents or persons having this matter in charge, the advisability of admitting this class of stock, and recommend that the laws be so changed as to permit the delivery of apple trees showing hard or hairy form of root or crown gall; also, that this resolution be placed in the hands of our legislative committee with power to act at their discretion.

#### Rules for Prices.

J. H. Dayton, of Ohio, presented the following rules as a standard of conduct among nurserymen, and the same were unanimously adopted:

"That our lowest prices or trade lists should be mailed only to nurserymen or dealers with established headquarters, who are known to be actively engaged in the trade.

"That some effort should be made to have our price lists and quotations to orchardists and retail buyers nearer a uniform basis for same grades and varieties of stock.

"That as the practice of cutting prices as the season advances is one of the great demoralizers of both the wholesale and retail trade, established rates should be adhered to throughout the season.

"That parks cemeteries and other public institutions are not in the trade and are not entitled to trade rates.

"That stock shipped on orders of landscape architects and invoiced direct to their customers should be billed at same retail rates as if the order came direct from the planter."

A paper was read by H. W. Marshall, of Arlington, Neb., on "The Commercial Side of the Nursery Business," in which he maintained that while the prices of almost all other commodities had doubled in the last 10 years, the retail price of nursery stock has not been raised more than 25 to 30 per cent. This he attributed to the following causes: Mail order houses, "one-horse" dealers, and wholesalers selling at practically wholesale prices to retail dealers.

W. L. Howard, of Columbia, Mo., read a paper urging a closer co-operation between nurserymen and fruit growers, the former to strive for the raising of a higher grade of stock and furnishing same true to name, the latter to take better care of the stock after it is planted.

Geo. H. Whiting, who has been a resident of Yankton, S. D., since 1879, read a paper on "The Effects of Tree Planting in the Middle West." He referred back to the time when "one could travel from morning till night in almost any section of the state without seeing a tree as high as a man's head." The winds had full sweep, varying from the hot, scorching winds of summer to the destructive blizzards of winter. The planting of trees has greatly softened the rigors of the climate, conserving the moisture and checking the velocity of the winds.

"The Influence of California's Horticultural Development on the Nursery Business," was the title of a paper read by Geo. C. Roeding, of Fresno, Calif., he being the first California man present at a national nurserymen's convention for a great many years. California, he said, grows every variety of fruit known in the temperate zone, and its dried fruits find not only a ready market throughout the United States, but shipments are being made in ever-increasing quantities to the European countries. The raising of such immense quantities of fruits has caused a very great demand for nursery stock, which is being drawn from all states in the union.

#### Replacing Stock.

J. R. Mayhew, of Waxahachie, Tex., read a paper in which he emphatically condemned the replace policy, and offered the following resolution, which was adopted:

Whereas, the policy of replacing nursery stock at less than full value, heretofore extensively practised over the country generally, has resulted in serious injury to the nurserymen, exercised a demoralizing influence over the salesmen, and has not really benefited the planter because it has encouraged negligence on his part in planting and looking after trees and plants purchased by him, and led him to underestimate the value of such nursery stock sold him; and

Whereas, this association was instituted and is maintained to promote the best interests of both nurserymen and planter, which said interests are being seriously crippled by the above policy; and

Whereas, said practice necessarily tends to destroy the confidence of the planter in the nurseryman, and produces in his mind an erroneous impression as to the real value of the

goods sold by the nurseryman; now therefore,

Be It Resolved, That this association unqualifiedly condemns the said policy of replacing nursery stock at less than its full market value as being unwise, unbusinesslike and wholly unnecessary, and

Be It Further Resolved, That the real interests of the nurseryman and planter will be best promoted by the exercise of sound business methods in this, as well as other dealings with them.

Other papers read were: "Observations Upon European Nursery Stock and Their Plant Growing Methods," (illustrated by lantern slides), by Prof. John Craig, Ithaca, N. Y.; "Orchard Pests Still Unknown to the Colorado

W. P. Stark, Louisiana, Mo.

Pres.-Elect American Ass'n of Nurserymen.

Fruit Grower," Prof. E. P. Taylor, Grand Junction, Colo.; "Soils and Fertilizers," F. L. Rounsevel, Denver, Colo.; "Publicity Campaigns on the Part of Nurserymen," J. M. Irvine, St. Joseph, Mo.; "Varieties," E. S. Osborne, Rochester, N. Y.; "Transplanted Raspberries, for the Retail Trade," W. N. Scarff, New Carlisle, O.; "Herbaceous Plants," C. S. Harrison, York, Neb.; "A Study of the Nursery Lands of the United States," W. H. Stark, Louisiana, Mo.

After the close of the convention the members were most lavishly and fittingly entertained under the auspices of the Denver convention league, the Western Nurserymen's Association and the Colorado state board of immigration. Under the leadership of the latter an excursion was taken through the fertile plains skirting the mountains, stopping at Boulder, Longmont, Loveland, Fort Collins, Greeley and Lupton. At each place either automobiles or trolley cars stood in readiness to take the visitors to all points of interest surrounding the place. Literature in abundance was distributed, and the Colorado people owned up to being "boosters and boomers," full of enthusiasm and hope for their adopted state. A trip up the Moffat road, consuming an entire day, winding in and out among the rugged peaks until an elevation of 11,660 feet above sea level was reached, was a treat afforded the guests by the western nurserymen.

#### Notes on the Chicago Parks.

##### HARDY ORCHIDS AT LINCOLN PARK.

There are several pretty little plantings of hardy orchids at Lincoln park in the herbaceous grounds. Among those noted in flower during the last week was *Cypripedium spectabile*. It appears to be doing fairly well in the shade of some shrubs just west of the flower garden and while the growth is not so robust as it probably would be in moister conditions the flowers are good and extremely beautiful. *C. parviflorum* is doing well and the pretty little flowers with yellow lips and dusky sepals are freely produced. *C. candidum* is apparently well established and thriving and there is quite a number of the pretty white and green flowers open. *Goodyera Menziesii* is in good foliage and the flower spikes are pushing up. It should be in flower in about another week. These pretty native plants are worth more attention than they get and our parks are the place for them. It is hardly likely that trade growers will handle them as the demand is not likely to be large.

##### THE BEDDING PLANTS.

The cold nights, including the severe frost of June 3, played havoc with the bedding in all the parks. The geraniums have stood it fairly well all things considered but they are not by any means happy looking. Cannas are browned and unattractive and the foliage on such plants as *Abutilon Savitzii*, some of the salvias, coleuses and *Alternantheras* is falling rapidly. Pansies are fine this year, the cool weather suiting them well, but it will be late in the summer before anything like a good display can be expected in any of the parks.

##### HERBACEOUS PLANTS.

Among the herbaceous plants to be seen in the various parks just now the German irises take the lead. There are elegant displays in all, one of the prettiest plantings being around the ornamental water in Humboldt park. Nowhere have irises so good an effect as on the margins of streams or lakes, and these and the common flags are at their best right now. The double buttercup is pretty on the edges of the streams leading to the lagoon in Humboldt park and it may be noted here that this pretty and effective bit of Jens Jensen's work is now showing its true character as he intended. The delphiniums will soon be at their best, there are several *eremuri* in bloom and the peonies will be quite a show very shortly. The true Rocky Mountain columbine, the long spurred form indigenous to Colorado and other western states is not as frequently seen as the labels would induce one to suppose, but the true varieties are flowering now in Lincoln park and an enticing attraction.

Though not perfectly hardy the flowers of *Ismene calathina* are very attractive now in the borders at Lincoln park where it thrives well and flowers freely. The bulbs are taken up in fall and stored until planting time in spring. There are many of this class and of the hardier *pancratiums*, *crinum*s and *hymenocallis*es that could be used this way with advantage. The white and pink dictam-

nus or burning bush is showy now in several of the parks. The beautiful *Dimorphotheca aurantiaca* is flowering at Lincoln park as well as a fine lot of dodecatheons, many of the prostrate veronicums and others. A pair of fine century plants are just throwing up their flower spikes in front of the greenhouses and inside the display is showy and good. The orchids are attractive now. *Cattleya* Harry Selfridge being in flower. We note that the parentage of this undoubtedly fine flower is on the label as *Cattleya superba* and *C. Aclandiae* but how such a flower as this could possibly be the result of such a cross we cannot imagine. There is not the slightest resemblance, either in habit, color or shape of flower to either of these. Other orchids in flower are *Sobralia maerantha*, several *thunias* and a number of *cattleyas*, including the yellow *C. Holfordi*, a plant seldom seen.

#### HYBRID SWEET BRIARS.

In Humboldt park we came quite unexpectedly on a number of the hybrid sweet briars and they are very fine. In Jackson park, near the yacht harbor the common sweet briar was planted a year or two ago in great masses and it has made a fine growth but it cannot compare with these newer hybrid forms, the flowers of which are extremely beautiful. One looks a good deal like the old Copper Austrian briar but it is much stronger in growth than this, while several of the pinks and light reds are very attractive. The plants are making an elegant growth and they are worthy of more extended culture. Other roses are behind this year. *Rugosa* is in flower in several parks, also one or two of the single wild forms, but the rose gardens in Washington, Jackson and Humboldt parks are quite two weeks behind time this year. The aquatics in Lincoln park are coming along in good shape and already *Nymphaea Zanzibarensis azurea* is in flower. Around the edges a collection of various bog plants are grown which will be of considerable interest through the summer.

#### ALTERATIONS AT WASHINGTON PARK.

Those who have not visited Washington park lately will find quite a change in the flower garden end. The beds in front of the conservatories have been sown down to grass and at the south end a new administration building has been put up. The ground around is being graded and thousands of yards of soil have been brought in to bring up the level to that of the terraces. Just at present all is chaos, but eventually a broad road is to be made through the center of what is now the flower garden and a drive around the front of the building. Several of the greenhouses have been torn down and there is a talk of building others, possibly in Jackson park, to provide the necessary bedding stock. All around the grass looks fine, also the trees, but here as in the other parks the flowering shrubs have been very poorly flowered this year. In Jackson park the weigelas are at their best and we noticed the fringe tree, *Chionanthus Virginianus*, flowering freely, but the spireas and others that are usually so good in June are poor indeed.

## THE AMERICAN PEONY SOCIETY

### Annual Meeting at Boston.

After being postponed, on account of the backwardness of the season, from June 9-10 to June 14-15, the annual meeting of the American Peony Society was held on the latter dates in Horticultural Hall, Boston, and, when the quite unprecedented weather of the present spring is taken into account, it must be classed as a more successful one than could have been anticipated. There are hard workers in this society's executive and they have proved how well they can stand up under difficulties. Both halls of the Massachusetts Horticultural Society, in conjunction with which the meeting was held, were filled with flowers finely arranged. Taken as a whole the show was excellent, but to take the blooms individually a specialist would possibly see that the inclement weather conditions had left their mark upon them. Still the show was far better than the most sanguine had anticipated and will, we hope, be an inducement to those in charge to continue the good work. If they can do as well as this in such a wretched season, we will expect great things next year or in any future year when the weather is more conducive to a good display. Among the leading prize winners are the Cottage Gardens Co., Queens, N. Y.; G. H. Peterson, Fairlawn, N. J.; Bertrand H. Farr, Reading, Pa.; T. C. Thurlow's Sons, West Newbury, Mass.; T. A. Havemeyer, Hempstead, N. Y., and S. G. Harris, Tarrytown, N. Y. The old officers of the society were re-elected as follows:

B. H. Farr, Reading, Pa., president.  
C. J. Maloy, Rochester, N. Y., vice-president.

J. H. Humphreys, Germantown, Pa., treasurer.

A. H. Fewkes, Newton Highlands, Mass., secretary.

### President Farr's Address.

I was initiated into membership of the American Peony Society in this hall at its exhibition held here four years ago and I have ever since had the most vivid and pleasant recollections of my visit here and the cordial reception given us by the Massachusetts Horticultural Society and by the many friends of the peony whom I met during that visit and who have many of them since become personal friends. I well remember the splendid exhibition made at the time by Mr. Shaylor and the Thurlows, Mr. Hollis and many others and my visits to their establishments.

Eight years have passed since the American Peony Society was organized for the purpose of trying to straighten out the confusion existing in the nomenclature of the peony and publishing accurate descriptions by means of which all authentic varieties may be identified. Most of the members of the society are more or less familiar with the first steps which led to the organization of the society. We are indebted first to C. W. Ward, who conceived the idea and issued the first call and through whose efforts the co-operation of Cornell University was secured and the test plot was established. We must acknowledge, too, the ready response of our home growers whose generous contribution of plants running into thousands made the test plot an established fact. To these were added, through the efforts of Mr. Ward and Professor John Craig of Cornell University, the splendid foreign collec-

tions which have proven to be of the most vital importance. The task of preparing and planting the peony plot was done by Cornell University, who from that time on assumed the great burden of the work, and it is doubtful if many members of the society realize the full extent of indebtedness we owe to the university. The test plot has proven the necessity for its establishment, at the same time proving how useless it would have been without the co-operation of the university, as it would have been out of the question for any individual or firm to have carried on this test on so large a scale for so long a period. Last but not least we realize how much has depended on those at Cornell who have had the actual work to do, to Professor J. Eliot Coit, and to Professor Leon D. Batchelor, who has so ably and conscientiously carried on the work from where Professor Coit left it. Following up the plan adopted last year Mr. Batchelor has in co-operation with the special committee appointed for this work visited other collections where the season is earlier than at Cornell, and so far over 100 new descriptions have been made this season, and it is expected before the season closes at Ithaca a total list of approximately 500 varieties will have been identified and described. It is proposed to publish a fourth bulletin covering the work to date early this fall.

We have previously been cautioned against the tendency to name new seedlings which are inferior to varieties already in existence. There are so many perfect varieties that many believe it almost impossible to make any additions that are genuine improvements. The American Peony Society should, and it is to be hoped will, come to be recognized as the authority competent to pass on the merits of a new introduction, and it should be so conservative that its certificates of merit granted to a new variety should become a guarantee of the value of the new introduction.

The splendid collection which will be in existence at Cornell University will furnish the society with unusual facilities for judging a new variety. Whenever possible a specimen plant of the new variety should be sent to Cornell in order that it may prove its merits among the older varieties already established. This cannot always be done while the originator is in possession of only a few plants which he would not wish to disturb or part with, neither is it possible for him always to send flowers to the exhibition which may be held so far away or at a season when his plants are out of bloom. To overcome this, I offer the suggestion that a committee may be appointed in several localities to whom a new variety might be submitted, and if it met with the approval of the sub-committee they might recommend the variety and have it passed upon by the society as a whole at a later date. This would necessitate some delay in final recognition which would not be unwise as the merits of a variety cannot always be finally judged until after several years have passed.

I am pleased to be the bearer of a message from our honorary president, C. W. Ward, to the society expressing his regret that continued ill-health makes it impossible for him to be with us at this meeting. But he wishes me to assure you that he retains all his interest in the society

and that he hopes in the near future to be able to take an active part in its work.

#### REPORT OF THE NOMENCLATURE COMMITTEE.

As Professor Craig, chairman of the nomenclature committee, cannot be present at this meeting I have been requested to make a brief report of the work accomplished. Part of this ground I have already covered. The two bulletins now published describe 340 varieties. In the second bulletin also a number of corrections have been made to the first list. It was realized last year that the season of study was altogether too short for any one locality to carry on the work without extending it over a number of years and Joseph Dauphin, of the Cottage Gardens Co., and myself were appointed a special committee to assist Professor Batchelor and the season was greatly prolonged by beginning the work at Wyomissing, following it up to the Cottage Gardens Co., where the meeting was held and finally at Ithaca. The immediate results of this course are shown in the large number of varieties added to our list in the new bulletin.

It is expected by the close of the season there that practically everything will be done in the old plot that it will be possible to do. There are still hundreds of names existing in the plot which it will never be possible to trace to any distinct origin, but the vast number of names originally existing there have been reduced to a very large degree by the great number of synonyms found, all of which have been noted. As examples of this I might mention *Edulis Superba*, Dr. Brettonneau, Queen Victoria and others which have been duplicated under 25 or 30 different names each, to say nothing of the host of red varieties, most of them of inferior quality, which are to be found. It would seem as if everyone who has a red of any kind calls it *Delachei* or *Francis Ortetat* or *Louis van Houtte* so that, strange as it may seem, these, the most common varieties, have been the hardest to determine. And of the many *Delacheis* it is a question if any of us are positively sure just which one is the true variety, unless it is that sent us by Dessert. There is a common pink peony which among many other names passes for *Edouard Andre*, but the true *Edouard Andre* is different in every way, being an immense very double flower, very late.

These are merely examples of some of the difficulties that the committee has had to contend with. Of the varieties left in the original plot it is doubtful if there will be many remaining which will be worth giving any further consideration. Doubtless the larger part of these have been unnamed seedlings sold in mixture to which names have been given in order to distinguish them where they have been grown in nurseries. It is been made, but the committee has been made but the committee have had unusual facilities in making a wide range of comparison in every case, and we have every reason to believe that in most instances we have reached conclusions and that the errors existing will be detected and corrected before the final publication is complete. The decision of the committee may not in every way agree with individual opinion but it will at least establish a basis upon which the work for the future may be done, and if it is adopted as a standard eventually it fulfills the object sought.

I wish to reiterate the splendid services Mr. Batchelor has rendered the society in carrying out this work.

I also wish to make mention of the fortunate selection of Joseph Dauphin who by his remarkable memory and ability to retain his impression of distinctions in color and form of flowers and the long years of study he has given to this subject has been able to render us invaluable services. The peony plot at Cornell now comprises a number of acres, a large addition having been made for the new planting last fall which will eventually be the permanent planting belonging to the university in accordance with the original agreement. The second planting donated for the purpose of selecting the "best 100" varieties will be in prime condition, and will, doubtless, be of great assistance.

#### Secretary Fewkes' Report.

The present membership of the society includes 52 active members and five honorary members. During the year we have lost one member by death, Thos. C. Thurlow, of West Newbury, Mass., who passed away July 2, 1909. He was a charter member of the society, taking great interest in all that pertained to it, and was one of the first to make a specialty of the peony in this country. In his death the society has lost a valuable member and those of us who were privileged to know him intimately, have lost an esteemed friend. Since the organization of the society in 1903, we have lost by death three members, and by withdrawals and those who have dropped out, 12. Starting with a mere handful of signers in 1902 the membership had increased to 36 during the year of organization, and notwithstanding these losses, has steadily grown to its present numbers. It is very encouraging to note that at least two of the members who dropped out have this year reinstated themselves, showing that the work accomplished by the society has a substantial value and that, although they have been a long time in maturing, the fruits of our labors are beginning to be available, and honor is due to those who have stood by and made it possible to accomplish these results. The way has not been altogether a smooth one, and many obstacles have presented themselves, the most embarrassing of which has been the comparatively smallness of our membership, which has necessarily limited our available funds, both for carrying on the nomenclature work and the payment of prize money to successful exhibitors.

The original membership was very largely composed of commercial men and included the greater part of the large dealers of the country. The number of these latter must necessarily be limited, and it is to the amateur class that we must look for future members, and to which the commercial man must look for his most profitable business. The field is a large one and every member should feel it incumbent upon himself to use what influence he may have with such of these as he may come in contact with to interest them in our work and secure them as members. The circular sent out a short time ago was a move in this direction and was intended to help present the matter to the public.

From the inception of our society the interest has centered almost entirely upon the herbaceous class of peonies, particularly the albiflora varieties. This in itself is not surprising, as this class is by far the most common and easiest of cultivation, but the time must come when more thought will be given to the Moutan class, or tree peonies. In them we find an entirely different

range of color, many of them being exquisitely beautiful in shade and texture. Preceding in their time of flowering as they do the albiflora class, they lengthen the peony season very materially and add a peculiar charm to the garden. Undoubtedly the great reason for their scarcity is the impression that has gone forth that they are very difficult to cultivate. It is true they are slow in coming to perfection, and that grafting must be resorted to, to perpetuate the varieties, but where skill is bestowed upon them these difficulties fade away and the reward is a ravishing display of beauty that will repay all the time and care given them. Without doubt many will take exception to these statements, but in reply to them I would say that to be convinced that what I have said is true they should visit the gardens of Prof. C. S. Sargent at Brookline, Mass., and see what can be done with the Moutan when its culture is made a specialty, as it has been done there under the management of Charles Sander.

The exhibition in connection with the meeting at Queens last June was a fairly good one and did much credit to the exhibitors who, though few in numbers, staged a large number of flowers. B. H. Farr, Geo. H. Peterson, S. P. Harris, T. A. Havemeyer and John Lewis Childs were the exhibitors.

## OBITUARY.

### Ernest Calvat.

Horticulture in general and the chrysanthemum growing fraternity in particular suffer a great loss in the death of Ernest Calvat, which occurred recently at his home in Grenoble, France. M. Calvat was recognized as the greatest raiser of the modern chrysanthemum in the world. He was not a gardener or nurseryman by training, but turned to gardening as a recreation. Taking up the chrysanthemum in 1887 and favored by good climatic conditions, he produced many seedlings that practically revolutionized chrysanthemum growing. After a time he gave up his glove manufacturing business and turned all his attention to chrysanthemums, producing, in addition to seedlings, many exhibition blooms for Paris florists. He was a constant exhibitor at all European shows and met with remarkable success up to the time of his death. He was a member of many horticultural societies; a recipient of the Grand Prix d'Honneur (the only one ever bestowed upon a chrysanthemum grower), and an officer in the French Academy.

### Charles Eissner.

It was quite a shock to his many friends the morning of June 13 to learn of the death of Chas. Eissner, who conducted a floral business at 6105 Penn avenue, Pittsburg, Pa. Mr. Eissner had been feeling ill for several days, when pneumonia set in, which brought on his death. Mr. Eissner was born in Geissen, Germany, in 1854. He came to this country when 15 years of age and started in the confectionery business on Federal street, Northside. Later he moved to his present location, where he conducted a confectionery store. About two years ago he took over the floral establishment of Oliver Beet, which business he has since conducted. He made a great many friends and traveled considerably, making preparations for an extensive western trip on which he was to start at the end of this week.

# THE AMERICAN FLORIST

MARGUERITE Mrs. F. Sander is highly spoken of in the British trade journals and is described as "a pure white variety of great beauty. The flowers are not unlike a huge double pyrethrum and are borne on long stems; they should prove of great value for cutting." It was shown by F. Sander & Son at the Temple show and given an award of merit. The largest flowers shown were about five inches across and illustrations show a flower like an anemone chrysanthemum with a quilled center.

ON June 26 Belgian horticulturists will celebrate the centenary of the birth of Louis van Houte. The great horticulturist was born on July 1, 1810, and died May 9, 1876.

## Society of American Florists.

### DEPARTMENT OF REGISTRATION.

As no objections have been filed, public notice is hereby given that the registration of the fern, *Nephrolepis Roosevelt*, by the American Rose & Plant Co., of Springfield, O., becomes complete. H. B. DORNER, Sec'y.

June 9, 1910.

## American Rose Society.

### THE MID-SUMMER MEETING.

The time fixed by the by-laws for the annual change of officers of the American Rose Society is July 1, but in practice it has been found advisable to make the formal change during the annual convention of the Society of American Florists, and this year this will be held in Rochester, at which time a regular meeting of the American Rose Society will be held. We at that time desire to start a list of special prizes for the coming great National Flower Show at Boston. Every special prize has been distributed. The man who carried off the largest number of prizes at the New York show, held in the American Museum of Natural History, was H. C. Steinhoff, of West Hoboken, N. J. He took Mayor Breitmeier's prize. The Dorrance prize has been won only three times in 10 years; first by Robt. Simpson, of Clifton, N. J.; second by Poehlmann Bros. Co., of Morton Grove, Ill., and third by Benjamin Dorrance, of Dorrance, Pa.

Among the school children who visited the last exhibition, after viewing the splendid showing of blooms in the vases, a group of lads came to the writer and asked this question: "Don't roses have roots?" "Why, yes," was the reply. "Well, none of these have any." This was a child born in New York and asked what to his mind was a puzzle. A few days ago two small girls had a bunch of sweet briars and, being asked where they got them, gave answer, "Over in your lot. Don't they smell sweet? Why don't tame roses smell as nice?" This is simply a bit of child life history, along the line of a "Rose for every home, and a bush for every garden."

BENJAMIN HAMMOND, Sec'y.

## American Gladiolus Society.

The executive committee of the American Gladiolus Society has decided to keep the charter list open until the time of the Rochester convention in August. Applications and inquiries are coming in daily and this will give all ample opportunity to join in time for the society's first exhibition, which will take place at that time in connection with the Society of American Florists' annual exhibition. Already there have been contributed the following prizes to be contested for at the first show:

From W. W. Rawson & Co., Boston: Rawson's silver gilt medal for the best American seedling gladiolus, never before exhibited, nor yet dis-

seminated. This prize can be awarded if there is only one exhibit, but the exhibit must possess special merits.

Rawson's silver medal for the best collection of 25 varieties of gladioli, each variety to be represented by three spikes, size of flower, openness of form, color and number of flowers on the spike to be considered.

Rawson's silver medal for the most artistic basket filled with *Gladiolus America*, judged for arrangement only.

Rawson's silver medal for 10 spikes of the purest white gladiolus.

Rawson's bronze medal for 10 spikes of the best scarlet gladiolus.

Peter Henderson & Co., New York, have offered \$10 for the best collection of 12 new gladioli, not yet in the market, three spikes each to be exhibited.

Vaughan's Seed Store, New York and Chicago, have offered a silver medal for the best 25 spikes of *Gladiolus Mrs. Frances King*.

### TO EXHIBITORS.

Will all who wish to exhibit at the first show of this society, in connection with the annual exhibition of the S. A. F., please communicate with me at once so that adequate space can be secured?

L. MERTON GAGE, Sec'y.

## National Sweet Pea Society.

The following additional prizes have been offered for the annual exhibition of the National Sweet Pea society to be held in July:

Stumpp & Walter Co.'s prize for the best three vases of sweet peas, Spencer type: First prize, \$5; second, \$3; third, \$2.

The J. M. Thorburn Co.'s prize for the best vase of pink sweet peas: First prize, \$5; second, \$3; third, \$2.

The John Lewis Childs' prize for the best vase of white sweet peas: First prize, \$5; second, \$3; third, \$2.

Sutton & Sons' prize, (Reading, Eng.): Cup value \$25. for the best table of sweet peas to be arranged on a space four by three feet and not to exceed three feet in height.

We are now working on the final schedule and hope to have same ready in about two weeks. Concerns or individuals wishing to offer prizes for this exhibition should notify the secretary immediately.

HARRY A. BUNYARD, Sec'y.

## Stock is Plentiful, Cheap and Good.

We invite all retailers who want stock of the best quality, of the kind that suits their most particular customers, to communicate with us and do it right away.

We have the goods; if you have a demand for June stock we can supply you in any quantity large or small, and of the quality you can do business with. This is no "hot-air"—the flowers are here to prove it. Fine flowers on good stems of all leading varieties of **Roses** including **Richmond, Killarney, White Killarney, My Maryland, Brides and Maids**. There is no sign of mildew, and both flowers and foliage are clear and bright. We have them in all lengths suitable for design work or for presentation bouquets.

**Carnations** too are a strong leader here. The warm weather so far has not interfered with the shipping qualities of the flowers. Buy freely while they are cheap and make a good display. There is no better advertising for your store.

Write or wire us for special prices. **Sweet Peas, Peonies, Gladioli, Easter Lilies and Greens** of all kinds. Everything needed by high-class retailers.

We Give Personal Attention to All Orders.

## BUY OF THE GROWER

### Chicago.

#### A GLUT OF CARNATIONS.

Although there is really an over-supply of nearly every kind of flower in the market this week, the carnations are about the worst and they may be said to have reached the glut stage. Several large consignments left the market last week end at \$3.50 per 1,000, small and split flowers it is true, but still carnations, and as such to be sold in department stores or on the street in various cities to the utter dismay of the legitimate retailers in those cities who have paid \$2 to \$3 per 100 for good stock. It is the same old story—the commission man must try and make something for his growers and good stock is held as high as possible to retailers—then along comes the Greek peddler or the offer for a big quantity from some department store, who wishes to sell the flowers, not with a view of helping their floral department any, but as a cheap form of advertisement, and away they

go by the thousand. "Tis a pity and pity 'tis 'tis so," but, as one of our commission men said, "What are you going to do about it?" This is the condition of the carnation market. And that of the rose market is like unto it, but "not quite so much like." There are excellent roses on the market and nobody wants them. There are also others, mildewed, small and unsalable flowers, that should have been dumped at the greenhouses, for they will hardly pay express charges and spoil the sale of better stock. This is expected in summer, of course, and it may be said that there were probably never better Bride and Bridesmaid roses seen in the market in June than are shown this year. The flowers are of fine substance and color, the foliage clean, and they are as good as they were in February. What the effect of the present hot weather will be during the next few days we will not prophesy, but it is doubtful if such flowers will much longer be on hand. Summer

Beauties from solid beds and from young stock planted this spring are coming in and are very fine, the stems stiff and well leaved, the flowers of good color and substance. Kaiserin and Mrs. Jardine are excellent stock, and altogether the roses may be said to be too good for the prices they are making. Local peonies are coming freely now, but they are by no means up to the usual standard. At least 25 per cent are more or less damaged and really first-class peonies are difficult to find. Orchids are still coming in quantities and lilv of the valley is in good supply. Green goods are easier, the arrival of new common ferns from Michigan, Massachusetts and other points helping out a good deal. Some are arriving badly heated, but on the whole the condition is good. Out-of-town shipping trade is holding up fairly well, but local and city trade is dull except in a few instances. Weddings and funeral work form the principal outlet now, with a few good dinners and receptions.

# Bassett & Washburn

Store and Office: 76 Wabash Ave.,

CHICAGO

Greenhouses: HINSDALE, ILL.

## NOTES.

When O. P. Bassett left New York for England, June 24, a number of O. P. Bassett carnations were sent from Hinsdale. These were delivered on the steamer and placed on the dining table during the entire voyage and put in the ship's refrigerator at night. On landing at Plymouth, Mr. Bassett took them to his hotel and they were in passable condition when he left, just nine days after they were cut. Considering the amount of handling the flowers had this speaks mighty well of the lasting properties of this variety. Mr. Bassett while in London will be located at the Cecil hotel, Strand, but he will probably put in very little time there. He was so taken with the beauty of the English southwestern counties on his journey up to the metropolis that he intends taking a motoring tour through them. He expressed surprise at the high quality and condition of the cattle in the counties passed through, and as Mr. Bassett is no mean judge of these we take it there must be some good bovines there.

John Mangel had a beautiful and unique dinner decoration at Hinsdale, June 11. Large vases were used, and in these long, made-up wreaths or garlands of Killarney roses and asparagus were placed, the center ones being almost erect, the outer ones falling gracefully in a fountain-like effect around them, altogether forming a most delightful decoration. Work at the Blackstone hotel has also been plentiful as well as the trade at the Wabash avenue store, and John has certainly been a good customer to several of the wholesale houses of late. Miss Whittingham, who has been at the Wabash avenue store a long time, is, we understand, to have charge

"The Busiest House in Chicago"

## Peonies

## Peonies

## Peonies

# J. B. DEAMUD CO.

51-53 Wabash Ave.,

CHICAGO

shortly of the store at the Blackstone, and this will surely mean increased business there.

J. B. Deamud Co. is receiving elegant new stock of ferns from Michigan, and these are selling at a rapid rate. Some of the wild maidenhair is among the shipment. Peonies are coming in fine shape here now and gladioli continue to arrive in quantity. We also noted some elegant flowers of Chatenay and Bride roses.

Emil A. Danz, 1611 W. Lake street, is having his retail store painted and an entire outfit of new fixtures will be added. He will leave for Germany in a few weeks to visit his folks. His brother, Rudolph, and family, will accompany him upon his return. Mrs. Danz will have charge of the store during her husband's absence.

The quality of the carnations coming in to Peter Reinberg's is still keeping good, considering the heat of the past week, but the roses are elegant stock. We noted especially good

Beauties and Uncle John. Shipping trade in roses is keeping up well, but that for carnations has dropped a little.

There are no better roses coming to this market than those handled by Zech & Mann and the color, form and substance of the Bridesmaid now coming in would be creditable at midwinter. Killarney is also in fine form here.

Mrs. Jardine rose continues to arrive in elegant order at Wieter Bros. and is proving itself one of the best sellers. Kaiserin and Bride are also good, the flowers and foliage of fine substance, clean and free from mildew.

Bassett & Washburn are especially strong this week on good White Killarney, Killarney, Beauty and Kaiserin roses. Mr. Washburn says business is keeping up remarkably well for the season.

Don't forget the dinner at the next meeting of the Florists' Club.

# Send Us Your Orders for June Weddings

and we assure you that they will be carefully executed, being able to give you **CHOICE STOCK** which we know **WILL PLEASE** your most particular customers.

We offer choice **BEAUTIES**, besides long stemmed flowers in the following varieties:

**My Maryland, Killarney, Kaiserin, Field, Richmond, Jardine** and others. **THEY ARE THE BEST IN THIS MARKET.** The foliage is good, the flowers of fine color, and they have not a fault.

**Our Carnations** are as fine as can be had. Can supply **Perfection, Victory, Bassett, Enchantress, Winsor, Aristocrat** and **Lawson** of **Al** quality.

Also fine home grown **Asparagus Plumosus** and **Sprengeri**.

**Fancy Sweet Peas** in quantities, white, pink, light pink, lavender and deep violet shades.

**Let Us Have Your Next Order.**

We are paying especial attention to out-of-town orders, and our facilities for shipping are of the best and most up-to-date.

## J. A. BUDLONG

37-39 Randolph Street, CHICAGO.

Roses and  
Carnations  
A Specialty....

WHOLESALE  
GROWER of

## CUT FLOWERS

The display of peonies at Vaughan's Nurseries, Western Springs, will be at its best this week and next and all interested should make a point of seeing this splendid collection. Carl Cropp has worked like a trojan the last few years in truing up and completing his list, and at this time of year peonies are his principal interest in life. Go to Western Springs when he is there if possible. There is also a fine collection of German irises and other herbaceous plants and shrubs that alone are well worth a visit.

The quality of the stock arriving at the store of the Poehlmann Bros. Co. continues of the high standard for which this firm is justly noted. Among the roses Killarney, White Killarney, Richmond and My Maryland are superb flowers for the season, while the Beauties, from young and old stock, are in the best possible order. Spanish irises, orchids and fine lily of the valley are also arriving in quantity and in the finest order.

Beauties from young stock have a fresh and beautiful appearance, and are especially suitable for wedding and commencement work. Such stock is now arriving at Kyle & Foerster's, and W. Kyle says they can supply them in any quantity, they having the entire cut of a very large range. We noted also that the gladioli and peonies arriving at this up-to-date firm's store are of elegant quality.

Vaughan & Sperry say they have already in the half month, done more business than during the whole of June last year and business is still keeping up. Just now some remarkably good Beauties are being handled, long stemmed, clean and of good color and substance, while stock in general, and carnations in particular are very plentiful here and a lot of them are handled.

Beauties and all other roses are still in fine shape at J. A. Budlong's and we also noted a very rich deep violet shaded sweet pea which should be an excellent seller, the color being most attractive. Killarney, Mrs. Jardine and Kaiserin were among the roses noted as particularly good while we have never seen Field in such good condition as it is here at present.

Joseph L. Raske of Jacks n boulevard has the sympathy of all in the death of his mother, who passed away last Thursday and was buried on Sunday. A beautiful lot of designs and funeral flowers were sent. Mr. Raske

has been very busy with funeral work of late.

Peter F. Hemer, the gardener-comet has appeared and disappeared again, his last appearance being a four weeks' engagement at the West Park playgrounds from which he disappeared without notice. No reward is offered for his discovery.

Erich Arlt, 5324 W. Leland avenue, is fixing over all of the benches in his greenhouses. Mr. Arlt states that business is very good, having sold all but 50 out of his stock of 12,000 geraniums, the plants selling on an average of eight cents.

Henry Hulke, who formerly was in the retail business at 2535 W. Sacramento avenue, is doing contracting work in Baldwin county, Alabama. Mr. Hulke is well pleased with his surroundings and has no intentions of returning here.

John Braje, 1630 Ballou street, recently purchased four cases of orchids from G. L. Freeman Co., Fall River, Mass.

Canger & Gormley report business good, especially in wedding decorations and bouquets.

J. F. Wolniewicz recently removed from 3118 W. North avenue to 1550 N. Kedzie avenue.

Visitors: F. A. Gerlach, superintendent Mitchell Park conservatory, and F. Kaiser, of the Kaiser Floral Co., Milwaukee; Wm. Graff, Columbus, O., and his brother, Sam Graff, of Seattle, Wash.; N. B. Stover, Grand Rapids, Mich.

MORRISTOWN, N. J.—Business with the retailers was excellent on Memorial day. Everything in the way of a flower was taken; pot plants, mostly geraniums, were taken in six, dozen, and 100 lots to the cemeteries. And, too, to the credit of some florists, let it be said, that many a grave of some old-time Morristonian received flowers and plants—in sentiment and in memory, which otherwise would have been passed by.—E. R.

### St. Louis.

#### STOCK PLENTIFUL.

The first part of the week the rainy, cool and unseasonable weather continued, but on Saturday it warmed up considerably and we begin to think that summer has at last made its appearance. School closings, conventions, etc., form the only outlet for flowers as transient trade is very quiet. The unclement weather has certainly been hard on the plant men. One week in March was our spring, and it now looks as if we will be plunged headlong into summer before we realize it. Stock is somewhat plentiful. American Beauty roses have improved in form and color. Gladioli, large and small varieties, are in and selling well. Outdoor sweet peas are backward on account of the rainy and cool season.

#### NOTES.

The twenty-third anniversary meeting of the Florists' Club took place at Odd Fellows' hall June 9, with President Windler in the chair and 50 members present. J. J. Beneke read an essay on "Brotherly Love Among the Florists." The essay was written by Fritz Blumenschneider and caused much merriment. Jule is somewhat of an actor himself and read the essay with all the force and gesticulation possible, and everyone told him he was one of "unsere leute." The florists' bulletin was discussed, several members took stock in it and the first publication will be out in six weeks. The annual picnic and outing was announced by the trustees, J. J. Beneke, Chas. Schoenle and Harry Ostertag, to take place at Ramona park July 21. After the meeting a smoker was given. Harry Balsley, of Detroit, Mich., and S. S. Skidelsky, of Philadelphia, Pa., were present and called upon to make a few remarks. Fifty dollars was voted by the club for the picnic. At the next meeting, July 14, the nomination of officers will take place. J. J. Beneke was appointed as committee of one on transportation to the S. A. F. convention at Rochester, N. Y., next August. The question box was interesting and high prices demanded for Memorial day stock were discussed. Geo. Angermueller and Will Smith, of the W. C. Smith Wholesale Floral Co., replied and declared that the scarcity of stock demanded \$4 per 100 for Boston Mar-

## FLOWERS FOR JUNE WEDDINGS AND SCHOOL COMMENCEMENTS.

To those customers who have been using our flowers right along we need only say that our stock was never in better condition than at present. A word to the wise is sufficient.

To those who are not among our regular customers, we wish to say that there are no better flowers reaching this or any other market than those we are now receiving from our mammoth greenhouse plant.

**Beauties**, long stemmed, medium and short for all purposes. **My Maryland**, **Killarney**, **White Killarney** and **Richmond** roses are especially good and we have extra long stems, 40-inch, fine for graduation bouquets, **Carnations** in all leading varieties. Plenty of fine colored **Enchantress**, **Winsor** and **Lawson**.

Home-grown **Orchids** (Cattleyas) a specialty, **C. Mossiae** and **C. Gigas** are in full cut and the flowers are especially good. **Greens** of all kinds **Adiantum** and **Asparagus**.

ket, but no one mentioned what the retailer got for asking \$1 per dozen from his customers.

Ernest Strehle has been appointed superintendent of parks. He has been connected with the park department for seven years and is a first-class gardener. He takes the place of the late Geo. Ostertag.

C. Young & Sons Co. have completed the planting out at Delmar garden. This firm has had the floral decorations at this summer garden for years.

The greenhouses of Richard Frow and the Eggeling Floral Co. were badly damaged by the hail June 9.

C. A. Kuehn is handling some first-class lily of the valley. W. F.

HASTINGS, NEB.—C. W. Sidles is doubling the size of his plant with three houses, each 38x150 feet, built with galvanized iron bars and quite up-to-date. Business is good here both in plants and cut flowers and Mr. Sidles is building himself a residence.

### Syracuses, N. Y.

For the first time this city is to have a flower show next week, devoted entirely to roses. The event has been designated as a rose fair, and will be held June 20-21 at Mystique Krewe hall, South Salina street. The object is to get together an attractive collection of roses produced in this section by professional and amateur growers, to encourage the cultivation of the rose and to establish a rose society which will hold a fair annually.

The fair is being promoted by Rev. Dr. E. M. Mills, who is assisted by a committee composed of two women and one man from each Methodist church in the city. This committee invites every lover of roses, regardless of creed or nationality, to make an exhibit or attend the fair, and Dr. Mills will furnish all information relative to entries, etc., at his residence, 823 Sumner avenue. Dr. Mills is working hard to make the event a success. He is especially anxious to encourage the small growers, declaring that their opportunity for capturing some of the prizes is just as good as

that of the larger and more expert growers of roses. All exhibits in competition for prizes must be placed by noon, next Monday.

Dr. Mills will attend the great rose show of the National Rose Society in London, July 8. At this show prizes amounting to \$4,000 will be given. He is writing a book on roses which he will have published next winter. He has engaged P. de Longpre, of Hollywood, Calif., to produce the illustrations.

### Ithaca, N. Y.

The Cornell University campus never looked greener or more beautiful than it looks this year, owing no doubt to the cool, rainy season. The peonies on the experiment station grounds are in excellent condition, but very late, only a few of the plants showing bloom. Most of the plants, however, are well budded and will afford a grand display of bloom later. Extensive trials of sweet peas and cannas are in progress. The new Lord & Burnham range of the De-

partment of Agriculture is now ready for the students.

Prof. L. H. Bailey, who has been studying agriculture in Ireland, will return this week.

Prof. John Craig attended the Denver convention of nurserymen and is still absent in the west.

Henry Bool and his nephew, Arthur Bool, are making preparations to sail for Europe July 15.

Visitor: M. Barker of the AMERICAN FLORIST.

### Madison, N. J.

The June meeting of the Morris County Gardeners' and Florists' Society called out a large attendance to hear John E. Lager's talk on "Orchid Culture." Mr. Lager devoted nearly an hour to his theme, which was intensely interesting throughout. He took up the principal orchids of commerce section by section, and gave the present day methods of cultivation. The shading and construction of houses was dwelt on to quite some extent. A hearty vote of thanks was accorded the speaker. Joseph Manda spoke on "New Jersey at the Boston Orchid Show," as did Arthur Herrington. Wm. Duckham spoke on the Boston park system and advised every gardener visiting there to look up Mr. Pettigrew and he would never regret it. The only exhibit of the evening was a magnificent box of Earliest of All tomatoes (Sutton) from H. B. Vyse, who was awarded a cultural certificate. The flower show committee reported progress. As has been the custom for some years, the society adjourned its regular meetings until September 14 next. In the meantime the flower show committee will have lots to do.

Arthur Herrington was unanimously elected manager of our next show, which is a great help to the committee, as now we can make arrangements, form definite plans, and have a responsible head man, subject to the committee's approval in his work, of course. Mr. Herrington has always been on the committee of arrangements at all the flower shows since the society was organized. The executive ability and the taste shown in

arranging and grouping on these occasions by him more than warranted the society in its action.

The Morris Co. Gardeners' and Florists Society will hold its annual outing in conjunction with the Florists' Club on June 28. E. R.

### To Be Done Now.

#### IN THE GREENHOUSES.

Pot on young cyclamens, Begonia Gloire de Lorraine, double petunias and other stock before they become potbound.

Keep the houses where cool orchids are grown as cool as possible by heavy shading and frequent dampening of the floors and stages.

Propagate antirrhinums of good varieties by cuttings for next winter's flowering.

Push on with the propagating of poinsettias.

Water the young rose stock on the benches carefully just around each individual plant. Never wet the whole of the soil.

Young carnations may grow out of the rust but a few sprayings with a good fungicide will help matters some.

Make a note of the plants that sold best for Memorial day with a view to propagation.

Clear out any old plants of marguerites that are becoming infected with insects or they will soon spread all over the house.

A few benches of roses should be partially dried off now for pruning and mulching, those that are to be carried over of course.

Make plantings of Asparagus plumosus and Sprengeri and look carefully after the young smilax.

Pot the old stock plants of bouvardias if these are to be kept another year, first reducing the balls of soil a little.

Remove the side glass from the houses where violets are kept in all summer and put full ventilation on top.

#### OUTDOORS.

Finish the planting of all gladioli without further delay.

# APHINE

**Aphine Manufacturing Co.**  
**MADISON, N. J.**

A good mulch of strawy manure is excellent for sweet peas, keeping the soil moist and the roots cool.

Plant out stevia, boulevardias, stock geraniums and other tender plants and water freely till established.

Nothing keeps the moisture in the soil among growing crops so well as continuous hoeing and this treatment leads to freer growth than watering.

Use a spray of Bordeaux mixture on hollyhocks should any signs of the rose fungus appear.

A shady position, either natural or artificial, should be provided for all

divided up plants like primroses, vio-  
lets, dornicums, etc.

Bulbs such as tulips, narcissi and  
hyacinths, lifted from the flower beds,  
are useful for planting in any rougher  
parts of the garden for cutting next  
year.

It is impossible to begin the paint-  
ing, glazing and repairing of green-  
houses and frames too early.

Cut peonies while it is cool and  
place in water in a shed to open be-  
fore shipping.

Clean up the edges of lawns now  
as they have been cut a few times and  
have become firm.

English ivy cuttings placed two or  
three in a small pot, well watered and  
stood in a shady place will make nice  
stock by autumn.

### The Temple Show.

The twenty-third annual Temple  
show of the Royal Horticultural So-  
ciety was held in London, Eng., re-  
cently. The weather was good and al-  
though the national mourning un-  
doubtedly affected the attendance,  
the receipts for the first day  
were larger than those of the  
same day last year. The mourn-  
ing worn by the ladies present  
made a marked contrast to the bril-  
liant costumes usually worn at this  
show. The features of the show were

the orchid and rose exhibits. The for-  
mer class was exceptionally good,  
many novelties of odontiodas, milto-  
nias and odontoglossums being shown.  
In roses the center of attraction was  
a brilliant Wichuraiana hybrid, named  
Excelsa, although the rambler and  
hybrid tea types were well represent-  
ed with the best novelties shown in  
years. Other promising introductions  
included a double-flowered marguer-  
ite; three choice rhododendrons, Prin-  
cess Juliana, Alice and Florodora; a  
variety of Rhus typhina with lacin-  
iated leaves and many caceolarias and  
cinerarias. Placing the novelties in a  
separate tent was an innovation, and  
this, together with marked improve-  
ment in the staging of all the exhibits,  
contributed largely toward making  
one of the best shows in recent years.

Pittsburg.

If the weather had been bright the past two weeks instead of dark it would be hard to tell how bad the market would have been glutted. As it is there is so much stock that probably as much finds its way out the back door as the front. The quality is going back very fast and this is especially noticeable on carnations. Outdoor sweet peas are fine and strong sellers. Cattleyas and Beauties also move nicely. There is never enough good red carnations and red roses to go around. Valley and lilies are slow. Greens are plentiful.

### NOTES.

Randolph & McClements are showing very fine hydrangeas and other flowering plants at their Baum street store. They have been very busy with orders for commencement exercises. One certainly is much surprised to see the change at the Penn avenue store of this firm. All alterations and arrangements have been completed and the store, which now occupies two large windows on Penn avenue and one on N. Highland avenue, may well be called the "Pride of the Avenue." The show windows display the artistic ability of Henry Klunders, manager. With Mr. Klunders at the wheel and his worthy assistant, Mrs. Kinney, the promises of the store look very good for the coming season, and we feel that such a management will more than make good.

I. E. Butler, New Kensington, came to this city June 9 and purchased three horses. He engaged a negro to drive him home, and he

E. C. Ludwig had the decorations for the Eagles at Duquesne garden. Mrs. Ludwig, who has been on the sick list, is now getting along nicely.

An automobile which ran amuck struck the greenhouses of C. H. Puhlman, Mt. Lebanon, and wrecked one end of one of the houses.

John McClements was married to Miss Pearl Dunkle, of Sheridan, June 15. He is spending his honeymoon in the east.

The recent windstorm did considerable damage to F. H. Westhoff's new greenhouses which are being put up.

Henry Blind states that the increase in his business lately compels him to put on a new bookkeeper.

We are sorry to report the death of Edw. Niggel's baby, the birth of which was reported last week.

Zieger Co. has a very nice display of flowering plants and cut flowers and report a good business.

J. J. Fuchs, of the south side, has rearranged his store.

### Philadelphia.

#### A GOOD DEMAND.

The demand for good flowers keeps such stock moving, there being considerable work requiring the best. Weddings and funerals with commencements have been the events of the week. White roses and valley have been bought up to the extent of the supply, valley being particularly scarce on some days and plentiful enough on others. Sweet peas have been seen in quantity, mostly outdoor stock with quality plus, the large White Spencer being particularly fine. Roses are, owing to the dull cool weather, much brighter in color. All are showing the effects of their long season's forcing and the flowers lack substance and are smaller. The difference between the local and the imported eastern stock is very noticeable. Carnations are getting scarcer, many of the growers getting their houses ready for the new planting. The late peonies are still coming in from outside and the earlier stock from the storage houses; they have been very useful in the larger decorations. Easter lilies are to be had in quantity; there is an increasing average demand for these flowers, as there is for other things which are carried at all times in stock at the commission houses. The weather has been very favorable this season for outdoor roses. For a month past the temperature has been below the normal and there has been numerous and heavy rains. Hybrid teas are at present loaded with flowers of splendid color, size and texture. To many they are a revelation. Their long season of bloom, which in most varieties of this class is continuous throughout the summer, will surely make them very popular, and they will without doubt replace in many cases the old forms of bedding that now ornament the lawns. Among the strong growing climbing roses or ramblers there is one of exceptional merit, introduced some three years ago, that seems for some reason to have escaped the notice of many in the trade. This is called American Pillar. It is one of

the roses sent out by the Conard-Jones Co., of West Grove, a seedling of Dr. Van Fleet's hybridizing. It is described as bearing large single flowers of rich rosy pink, approaching brilliant carmine, with a pronounced white center and large clusters of yellow crowned stamens. The separate florets are from 2 1/4 to almost three inches in diameter, borne in clusters carrying from 25 to 100 blooms. The foliage is wide and luxurious and the whole appearance of the plant one of great vigor, showing no sign of mildew. As a climbing rose it is the most gorgeous variety I have ever seen and should stand out among roses of its class as Crimson Rambler did when it had the field practically to itself.

Robert Craig, who spent a few days in Baltimore the past week, was loud in his praises of John Cook's new rose Radiance, which he saw growing outside, and which he said should be in every garden. He also visited the large establishment of R. Vincent, Jr., & Sons Co. at White Marsh, Md., where they do things on a scale that persons who have not seen the place can scarcely believe. He says there are gangs of men who do nothing from one year's end to another but pull vegetable plants. Hundreds of thousands of a variety are grown in blocks, and as the shipments are made from Texas to Canada the demand is continuous through the year. Geraniums are also grown by the hundred thousand, and many other things handled on a scale that is amazing to those who are not familiar with the business done.

Friday, June 24, has been selected by W. Atlee Burpee for "a day at Fordhook." It is the day after the adjournment of the American Seed Trade Association at Atlantic City, which convenes next week. To visit these great trial grounds is always a pleasure, but on such a day as this it will be doubly so. Mr. Burpee and Howard Earle have just returned from a flying visit to the seed centers of the far west, which included the seed farms at Lompoc, Calif.

We regret to announce the death of Louis A. Couche, of Seventy-third and Haverford, aged 54. Mr. Couche was a Frenchman, a sawmaker by trade, but for some years had engaged in the raising of violets and fancy garden vegetables. He grew large quantities of single violets. The business will be continued by his wife and son, Louis, who has for several years handled the flowers in this market.

Walter P. Stokes sails for Europe on June 15 for a two months' trip. The lily of the valley farms will be one of the centers of interest. Mr. Stokes has made a specialty of forcing valley for several years, increasing his output each season until the product of his place is now a large factor in this market.

Friday, June 24, is the opening day at Commodore Westcott's club house at Waretown, N. J. To those of the elect this occasion is looked forward to with great pleasure, and no one enjoys it more than the commodore himself.

K.

# REMOVAL. PHILIP F. KESSLER

Has Removed from First Floor to Third Floor, COOGAN BUILDING, 55-57 West 26th Street, NEW YORK CITY.

Same Floor as NEW YORK CUT FLOWER EXCHANGE, 26th Street Side.

As usual, all CUT FLOWERS in season. Finest CALLAS and LILIES every day in the year.

Open 5 a. m. to 6 p. m., Sunday until 10 a. m.  
Telephone 5243 Madison Square.

**PHILIP F. KESSLER.**

## New York.

### TRADE DULL.

The optimists, otherwise the fellows who can extract sunbeams from cucumbers, are now in demand; that is, if they can show any tangible results, which we gravely doubt from their skyrocket and rainbow-hued predictions. The past week closed in gloom and in the opening of this week it has been intensified. Cold weather with pouring rain is the order of the day. In the brief intervals between rains there is a leaden sky and a damp and penetrating atmosphere that has a depressing effect on mankind. There has been a few weddings, and there are also funerals, but the stock they call for, compared with the supply, is a small matter. Necessarily the weather has shortened the supply, but there is more than enough for all demands. Everything is cheap and prices are falling. There is considerable poor stock arriving, but, considering weather conditions, it averages better than might be expected, but the good stock has to take its chances with the poor. Good lily of the valley is being sold for two cents and less, and other leading stocks are dragging along in the same proportion.

June 13.—There is no improvement in the condition of the cut flower market, the consensus of opinion being that, if there is any perceptible change, conditions are growing worse. The solution is that the rich people have gone to Europe and that the middle classes are deterred from buying flowers or any other luxuries by the high cost of living.

### NOTES.

President Pierson of the S. A. F. was in this city on June 11. He had just returned from Boston, where he closed the contract for the Mechanics' building, where the second National Flower Show will be held March 27 to April 2, 1911. The genial president has spent much time on this proposition. He has made two trips to Boston in order to get the matter satisfactorily adjusted. This building was considered by the committee to be much the best location in Boston for the show, and now that it has been secured look out for a great exhibit.

Philip F. Kessler is in his new quarters in the Coogan building, Twenty-sixth street and Sixth avenue. These, as previously noted, are on the floor of the Cut Flower Exchange. For some days a force of mechanics worked hard in fitting up the place, noteworthy among their activities being the building of a very large ice box. In his old location Mr. Kessler

## ANNOUNCEMENT.

We beg to announce that on and after July 1, 1910, the premises on the first floor of the Coogan Bldg. will be under the management of **A. Moltz & Company, who will sell at wholesale only, all flowers in season in addition to roses.**

**A. Moltz**

**Maurice L. Glass.**

**A. MOLTZ & COMPANY, Wholesale Florists,**

Tel. 2921 Madison Sq. Open from 5 a. m. to 6 p. m. Coogan Bldg., 55-57 W. 26th St., New York.

was very successful, always having a line of the finest stock and a corresponding demand from the leading retail stores. In his new location his business will doubtless be greatly increased.

Wm. Long, for many years prominently identified with the retail trade of this city, has bought out Chas. H. Brown's store at 412 Columbus avenue. Mr. Long is a fine designer and decorator, and is well liked in the trade. It is understood that Mr. Brown will hereafter devote all his energies to his new store in the Belnard, Broadway and Eighty-sixth street.

The plant market at Canal and Washington streets continues to be a busy place in the early morning hours. Noteworthy plant stock is always to be found there from Herman C. Steinhoff and John Birnie of West Hoboken, N. J. Paul Reichert of New Durham, N. J., and Wm. F. Koenig of Guttenberg, N. J., as well as from many others.

James Coyle, foreman for Horace E. Froment, is again on duty. He has had a bad cold for the past two weeks.

M. C. Ford now has his new store fitted up in good shape with a fine display window.

### New York Florists' Club.

ANNUAL OUTING JUNE 28.

The following "Welcome" has been issued to the members of the New York Florists' Club:

"Once again we join together to gambol on the green. Thrice welcome to the annual frolicke! 'Let joy be unconfined.' Every member of our club should be present with his family and extend the glad hand of fellowship and comradeship; let us forget our differences and business for the day and meet upon a common ground for a common cause, and mutual friendship and entertainment.

"Let employer and employe mingle and exchange friendly greetings, remembering that we all have souls, are dependent one upon the other and are not 'mere tools to make things'; let us all be children on this glorious day, aye, men and women too, but with the heart of a child, guileless and with the smile and happiness of youth,

eager for the game and the sport of the hour and the gladness of it all.

"And so we repeat—Thrice welcome, come one and all! Leave dull care behind and enter into the spirit of this joyous occasion. Let the members of The New York Florists' Club be proud of their committee and the committee be proud of the members, and the whole trade be proud of one of the greatest organizations for the advancement of horticulture and good fellowship. All hail, and again thrice welcome!"

The regular monthly meeting of the club was held in the Grand Opera House building on the night of June 13, President Miller in the chair, this being the last meeting before vacation. There was a good attendance and an interesting programme.

Geo. V. Nash, secretary of the Horticultural Society of New York, delivered a lecture entitled "A Trip Through Haiti on Horseback." The lecture was beautifully illustrated with stereopticon views, and we regret the impossibility of doing it justice in this hurried report. Mr. Nash was accorded a hearty vote of thanks.

Wm. H. Siebrecht, Jr., reported for the committee on a plant market under the Queensborough bridge. The committee and all interested persons will appear before the board of aldermen on June 20 at 2 p. m.

The transportation committee of the S. A. F. convention at Rochester reported. After some discussion it was decided to take the Lehigh route, the fare being, one way \$7, round trip \$11.20. The train leaves New York at 10:25 a. m. and arrives at Rochester at 7 p. m.

Harry Bunyard, for the outing committee, reported very satisfactory progress. Three hundred and fifty dollars have already been subscribed for prizes.

G. S. C. Marsh, P. J. Smith, M. L. Glass and R. J. E. Young were proposed for membership in the club. The resignation of Wm. Plumb was accepted.

Anton Schulthies, the veteran grower of College Point, suggested that the new plant market be opened with a big show. Several committees were appointed.

C. Melstrom, of Sander & Son, was elected a member and made a pleasing address.

**Potting Compost.**

A potting compost, as the term implies, is usually composed of two or more constituents, and the successful grower of pot plants has a formula something like a cooking recipe for every kind of plant. As a thrifty housewife has her stores of things always ready to hand for making the various dishes for the family, so a capable gardener has his stores in some out-of-the-way part of the garden from which he can make up composts for all the kinds of plants he expects to grow.

We must, then, first deal with the constituents of some of the principal potting composts, or those likely to be most generally in demand. The first to be mentioned, as it is the basis of most composts, is turfy loam. It is best obtained from a clay soil as the fibrous roots of the grass and the other constituents mixed with it will sufficiently lighten it and we do not want the water to run through it like a sieve. It should be obtained from a rich meadow, and should consist of not more than the top three or four inches of turf—as bought it is often eight or nine inches, which is, of course, not so rich—this should be stacked up grass downwards in the form of a ridge, so that it may not get unduly washed by the rain, and left three or four months at least, and better six months, before it is put into use. Some put alternate layers of stable manure in the stack, and the result is very good when the whole becomes nicely mellow. When laying in a supply, it is well to estimate for two or three years, as loam improves by keeping and does not lose its fibrous character till after that time.

For those who grow plants of the heath family, which includes azaleas, a supply of peat is necessary, and this can be stored for a long time. Another necessary store, and one which will sometimes take the place of peat, is leaf-mould. Oak leaves are always recommended, but most people take the leaves of their own gardens whatever they may be, and these piled up and left for a year, and perhaps turned

once or twice, will become excellent light material for potting composts, consisting as it will do, of a mixture of humus and the sand from the sweepings of the gravel paths. An old hotbed makes a very good reserve of rich material, which is always handy. Supplementary constituents in order of importance, are sand, both silver and coarse, bone meal, basic slag, bone dust, and mortar rubbish.

This demands some notice. Some recognized measure should be used, preferably one holding a peck, so that we may know the quantity of compost we have in view, and the amount of the various constituents. A pail is as convenient as anything for the purpose for an amateur, holding a comfortable amount to carry and well adapted for helping to scoop up the loam, leaf-mould, etc. It is advisable to have either a small pail holding about a peck or a large one holding half a bushel, as when mixing artificial manures with the compost a pound to the bushel of soil is a safe amount to use, while without any measure, either of soil manure, one may easily use the latter at the rate of three or four pounds to the bushel without knowing it, and when one bears in mind that a pound to about 40 square yards of surface is at the rate of a hundredweight to the acre, it will be seen what a number of tons to the acre three or four pounds to the bushel of soil will be. It is not necessary to weigh the manure every time, a little experience enabling one to tell what weight a given measure will hold, artificial manures, with the exception of basic slag, not varying very much in the weight of a small quantity. When making a compost, it is a good plan to sprinkle some of the manure over it as each pailful is emptied on the bench, as it ensures a more equal distribution through the mass.

An excellent compost for soft-wooded plants in general, one which might be called a universal compost, consists of two-thirds loam, the remaining one-third consisting of old hotbed material and leaf mould in about equal proportions. When plants are given their final shift bone meal is a good lasting substance to mix with this compost at the rate of a pound to the bushel. It contains about half its

weight of phosphate of lime, as well as some nitrogen.

The soil in pots generally tends to become sour after a time, especially if watered with liquid manure, whether the latter is derived from animal manure or from artificial manures containing acid, as most of them do. Lime is a corrective of acidity, combining with acids and neutralizing them, and it is well therefore to add it in some form to the compost except where it is to be used for plants which are lime-haters, as, for instance, most plants which like a peaty soil, such as the heaths, many lilies, azaleas, etc. Some plants, on the other hand, are specially lovers of lime, such as wallflowers, stocks, and antirrhinums, and nothing is better to mix with the soil in their case than old mortar rubbish.

The compost mentioned above as suitable for most soft-wooded plants is not so for that universally grown plant which we call the "geranium," as it is too rich, and induces more leaf than blossom. Turfy loam by itself is quite rich enough for it. If one has a heap of turfy loam and manure in alternate layers, as suggested above, that is by itself good enough for most plants without the addition of anything else than bone-meal, or lime in some form or other, according to the character of the plant. (Some samples of basic slag contain as much as 15 per cent of free lime, besides phosphate of lime). For all young plants in the seedling stage such a mixture of loam and manure stacked together is quite rich enough, nothing needing to be added to it but some sand to keep it open.—Gardeners' Magazine.

Baltimore.

The excessive rains continue, and temperature, especially at night, is below the normal. Mildew is prevalent in the rose houses, and indeed, in many places some of the hardy roses which, like the Crimson Rambler, are peculiarly susceptible, are white with it. Corn and other crops in the gardens and truck patches which like the ardent rays of the sun are dragging out a mean life, but the hardier sorts, like peas, etc., are growing equal to Jack's beanstalk. Trade is not very lively, but there is something doing all the time, the various commencements of the many colleges and schools, for which this city is celebrated, are making demands which cause some little ripples of business, pretty fairly distributed in all directions.

Death has had its innings: George Mehl, of Fullerton, lost a day or two ago, his youngest daughter, Rosie, a young woman of promise, and has the sympathy of many friends in his sor-

row. James McNab, of Catonsville, formerly engaged in the florist's trade and well known to its members, died Sunday at Atlantic City, whither he had gone in the hopes of amending his health, which has long been failing. Mr. McNab was long engaged in the commercial fertilizer trade, was familiar with the chemistry of that great interest, and occupied a position of recognized familiarity with the values, manufacture and application of these materials. His investigations into their use in the gardener's operations were particularly useful and appreciated, and he was often called on for his views by the florists. He was a man of great intelligence, and his death will be heard of with sincere regret. He was a brother-in-law of Isaac H. Moss, president of the Florists' Exchange. He leaves a widow, but no children.

George C. Shaffer and wife, of Washington, D. C., were over on Sunday and made the rounds of some of their friends' places, spending, they said, an enjoyable day. Their intention of coming by auto was defeated by the soft roads and frequent showers.

The season of vacations is on us, and many are beginning to put their houses in order for trips abroad, or to enjoy the attractions of home travel or attendance at the meeting of the Society of American Florists, which will attract quite a number.

Albert G. Fiedler, of S. Charles street, and Ernest W. Fiedler, of Belair road, are off for a voyage over seas, and will spend several weeks in Germany. S. B.

Omaha.

Memorial day is past but not forgotten, as it was one of the heaviest business weeks we ever had and perhaps the most profitable one. A good many orders could not be filled; stock was plentiful and of good quality and therefore commanded good prices. Carnations sold for \$1 per dozen, roses \$1-\$2, American Beauty \$1-\$6, lilies \$3, sweet peas \$1-\$2 per 100. Jasmines are on the decline and people won't buy them as long as they can get some other flower. Peonies sold fine, \$1.50-\$2 per dozen; they were scarce. June business is fine, weddings and receptions keep all busy. All report a good bedding plant business and no surplus can be had. The growers are busy planting roses. It is exceptionally dry here and outdoor stock suffers, especially carnations. If it was not for the cool spring we would have everything burned up. There will be no fruit except strawberries; peaches almost all are gone; a few apples can be seen here and there.

The Florists' Club is contemplating a picnic next month. GRIPPE.

Orange, N. J.

The regular meeting of the New Jersey Floricultural Society was held in Lindsley hall, 240 Main street, Friday, June 10. The orchid exhibits from Lager & Hurrell, Joseph A. Manda, West Orange, and Wm. Runkle, gardener to D. Kindsgrab, were especially fine. Rose night was also observed, there being a grand display from the private estates in the Oranges. John R. Le Count of Maplewood, N. J., donated to the society a handsome silver cup to be competed for in any manner decided upon. It will more than likely be competed for at the chrysanthemum show in November. A hearty vote of thanks was extended to Mr. Le Count for his beautiful gift. During the evening we were honored by a visit from Mayor Arthur B. Seymour, who complimented the society upon the excellence of the exhibition.

The society is proud of the fact that five of its members carried off the principal prizes at the great orchid show which was held in Boston recently and a standing vote of thanks was

extended to them for the courage displayed in going to Boston and cleaning up the boards. Henry Hurrell responded, saying: "I don't see why it is necessary for us to go to Boston for an orchid show. Why can't we have one here in New York or New Jersey. There is a tremendous loss realized from shipping the flowers for so great a distance."

Joseph A. Manda replied in like manner, and said there was no reason why the idea could not be successfully carried out. New Jersey did itself proud, 95 per cent of the exhibitors being Jerseymen and 90 per cent of the prizes being carried off by the growers from this state.

John J. Dervan, gardener to A. C. von Gaasbeck, read a very instructive paper on "Growing Roses Under Glass," which was well received. He is a very successful rose grower. He recommended propagating about January 15, using heel cuttings for that purpose, and when rooted, using a mixture of one part manure to eight parts loam, potting them into 2-inch pots. For the next shift he uses 3-inch pots with a mixture of one part manure to six parts loam, finally putting them into 4-inch pots, one part manure to four of loam. He advised planting about June 15, on raised benches, one part manure to three of good fresh loam, filling the benches two-thirds full and pressing same hard. Before planting in benches he advised giving the houses a thorough cleaning and a good fumigating with hydrocyanic acid gas which kills all insect life.

The awards in competition for points were as follows: Roses, S. M. & A. Colgate, gardener Wm. Reid, 95; A. B. Jenkins, gardener Albert F. Larson, 85; A. C. von Gaasbek, gardener, John J. Derran, 85; Thos. Edison, gardener, Frank Drew, 80; Carnations, Chas. Hathaway, gardener, Max Schneider, 85; Wm. Reid, 85; John Dervan, 78; Flowering Plant, Wm. Reid, 95; John J. Dervan, 60; Foliage Plant, Wm. Reid, 85; Display of Orchids, Lager & Hurrell, 98; Dederich Kindsgrab, 95. Certificates were awarded as follows for the exhibits not in competition for points: Joseph Manda, orchids, certificate of merit; Wm. Reid, roses, culture certificate; John Dervan, roses, certificate of merit; Dederich Kindsgrab, roses, certificate of merit. Fritz Berglund, gardener for the Essex County country club, showed gladioli and carnations. The society will not meet again until September.

LITTLE ROCK, ARK.—The annual convention of the Arkansas State Horticultural Society opened here June 8 with President D. E. Eicher presiding and 128 in attendance. Several interesting papers were read during the day.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D. C., Second Vice-Pres.; C. E. Kendel, Cleveland O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J., June 21-23, 1910.

THE stock of Kentucky bluegrass seed is reported to be practically cornered.

WALTER P. STOKES, Philadelphia, Pa., sails for Europe, June 15, for a two months' trip. The German lily of the valley fields will be visited.

CHICAGO.—Contract prices on the board of trade June 15 for grass seed were noted as follows: Timothy, \$4.35 nominal. White clover, from 20 cents to 25 cents.

VISITED CHICAGO: E. C. Luck, vice-president T. Lee Adams Seed Co., Kansas City, Mo.; C. N. Page and wife, Des Moines, Ia., enroute to the convention at Atlantic City.

W. ATLEE BURPEE has issued an invitation to many in the trade for a "Day at Fordhook" on June 24, the day after the adjournment of the convention at Atlantic City, N. J.

It is currently reported that the Kentucky bluegrass syndicate is in line to boost prices for the coming season as high as \$2.25 per bushel for 21-pound seed. Predictions of a 50 per cent crop this harvest are in their favor.

LEONARD SUTTON, of Sutton & Sons, Reading, Eng., with a number of others interested in British agriculture, are making a tour covering the more important agricultural colleges and experiment stations in the United States and Canada.

THE J. C. Robinson Seed Co., Waterloo, Neb., writes: "June 11; we have never known such unfavorable weather for the corn crop as we have had since planting time. It has been cold and dry, giving seed corn no chance to sprout or make any growth. Some crops have been planted three times and even then the crop will go through with not over 60 per cent of a normal stand. Sweet corn has been hit harder than the field varieties, as the planting stocks were all a little weak in vitality. The crop is about three weeks late and weather still too cold. Vines are more recently planted and it is yet too early to report much progress."

## Braslan Seed Growers Co.

Lettuce, Onion, Sweet Peas,  
Growers for the Wholesale  
Trade Only.

**SAN JOSE, CALIF.**

DENAIFES, seed growers, Carignan, France, wish to inform visitors to the international exhibition in Brussels that their stand is situated in the agricultural palace, French section, Group 7, Class 39, and invite all interested to call.

THE supreme court of the state of Nebraska has just handed down an opinion, sustaining the judgment rendered in the district court in favor of The J. C. Robinson Seed Co., Waterloo, against John Hamilton, H. B. Waldron, Citizens State Bank, et al. This suit was brought under replevin to recover a crop of sweet corn, grown by Hamilton in 1907, on plaintiff's land, and sold to Waldron, et al. The district court awarded the corn with costs to the plaintiff, and this decision absolutely places ownership of the entire crop with the owner of the land under the form of contract used. This decision will safeguard all future contracts where seedsmen own their land.

### Hyacinth and Tulip Culture in Holland.

We learn from Holland that on account of the warm weather at this time hyacinths, more than the tulips, are starting to dry up, and if this weather continues for a short time the growth of the bulbs will be very good. Again, on the other side, on account of the early ripening many bulbs will remain small and will therefore be useless for shipment which will result in not so many bulbs being sent away. At any rate it will be very good quality at the expense of quantity.

### Bean Prospects.

E. F. Sherman, Allegan, Mich., writes: "There are no old beans left in this section worth mentioning. The present outlook shows that the farmers are not going to plant nearly as many as common. The acreage will be about 90 per cent of last year and 70 per cent of two years ago. The variety will be mostly white beans that will be planted."

The Le Roy Produce Co., Le Roy, N. Y., advise: "The stock of beans back in the hands of growers is very light; we do not know of more than 1,000 bushels of beans left in this territory that would be naturally tributary to our warehouse. We have had an exceptionally good demand the past two or three weeks, and the stocks in the hands of dealers have been largely reduced."

### Iowa Seed Dealers' Association.

Des Moines was chosen as the convention city for next year by the Iowa Seed Dealers' Association assembled, June 9, at the Chamberlain in annual convention. The meeting next year will be on the second Tuesday in June. Over 30 Iowa seed dealers, which is nearly the entire number, attended the convention. They held morning, afternoon and evening sessions. At the dinner hour they were guests at a banquet given by the Iowa Seed Co.

Among those who addressed the convention were: Henry Wallace, Prof. L. H. Pammell, of Ames, State Food and Dairy Commissioner W. B. Barney, Prof. J. M. Campbell, of Chicago, and H. W. Graham, of the Twentieth Century Farmer. C. N. Page, of Des Moines was elected president for the fourth successive term. Other officers were also re-elected. They are as follows: Henry Field, Shenandoah, vice-president; John T. Hamilton, Cedar Rapids, treasurer; B. H. Adams, Decorah, secretary.

### Canned Pea Pack To Be Light.

The pea situation is strong. Several large packers have failed, while others will not operate at all, and, under the most favorable conditions, the pack will be light. As long as meats bring the prices that they have and are, farmers will not raise sweet corn and tomatoes for canning.

CHICAGO.—The first consignment of California sweet corn reached this market last week.

IN conversation with one of the Chicago vegetable growers, he stated that the average prices are not as good as last year. The cold weather keeping the output from being shipped held the market down the opening of the season, although the windup was greater than that of last year. He also stated that there was at one time an over-production of Grand Rapids lettuce under glass, but now the demand is far greater than the production. Cucumbers are bringing good money. We have heard on good authority that some of the vegetable growers will open a new store some time in August. The growers of the Greenhouse Vegetable Co. are well satisfied with their undertaking, the past year being very favorable to them.

THE following attempt of the Ontario Experiment Farm was made to kill bindweed by applying crystals of iron sulphate. On a thick patch of bindweed, three yards long by two yards wide, 20 pounds of the crystals of iron sulphate were placed. On a similar patch of the same size nine pounds were applied. On inspecting the plots three days after the applications were made, it was found that on the plot on which only nine pounds of the iron sulphate had been applied the leaves were only slightly damaged, while on the plot on which 20 pounds had been used all the leaves and stems were blackened and destroyed. Three weeks later, however, both plots looked as green and fresh as ever; even the heavy application having failed to weaken the underground rootstocks.

### Weeding.

June may be the month of roses for some people—to the market gardener it is the month of weeds. Weeding is always the dreaded part of all gardening operations. It means to get down on hands and knees and remove the weeds from the rows of seedling plants. Often the task is intensified by long spells of wet weather or extreme heat and parched soil. There is no way that we know of to avoid hand weeding; in fact, it is so important to drilled crops it is really the keystone to success. By weeding we also mean thinning, which we do at the same time, considering any excess plants weeds. The proper spacing of plants may vary on different soils and sections, but it is safe to say it never pays to tolerate two plants where one should be. A properly spaced crop will mature above 90 per cent perfect specimens, which means easy harvest and market; in other words, the grading

is done at weeding time and not at harvest.

Most drilled crops such as onions, carrot, parsnip, oyster plants and beet will permit of a closer stand if the rows are spaced liberally; or in other words, if the rows are close, we must allow more room between the plants. Thus we space most of our drilled crops, except onions, 16 inches, and then instruct the weeders to permit no two plants anywhere, and aim to be able to lay two or three fingers between each and every plant left to mature. If one wishes to experiment as to how far rows should be apart, here is a simple way:

Between the different crops allow room for paths, by missing one row; thus between onions and carrot the space would be 32 inches, and the same between carrot and parsnip. If the outside rows of any of the crops are superior to the inside rows, it is safe to say the crops were crowded. As we cannot avoid weeding, the next best thing is to reduce it to a minimum. This we do by hand raking all land for drill crops; by perfectly straight rows; by close shaving with the wheel hoe. Often when conditions are favorable we cut rows down as narrow as one's finger, which is only possible on well prepared land. In the end this is the cheapest.

We always aim to precede the weeding with the wheel hoe, cutting no more than the weeders can handle, and throwing the soil away from both sides of the row. This will allow a ready loosening of the strip to pull the weeds. With top-rooted crops like parsnips and oyster plant we use spike tooth hand rakes to loosen the row, which is a great help. Each weeder carries a paring knife; any weeds that resist are cut below the crown. Thus it is possible to do a perfect job speedily. If young help is employed it is best to pay by the row and for perfect work only. After weeds are pulled apply some nitrate of soda to start off the crop; it will do it nicely.

MARKETMAN.

### News Notes from Connecticut.

Connecticut market growers are quite discouraged over the unusually cool, damp and cloudy weather. For two years previous to this the sunshine was almost continuous and the philosophical ones now say we must grin and bear it, for nature is at work on averages. So far the rainfall is still below the normal. The month of May in the vicinity of Hartford showed more than an inch below the average. So far June has been the coolest, wettest and cloudiest on record and it is enough to give one a case of the blues to witness the slow progress of crops.

Down by the sea in the vicinity of Black Hall conditions are about the same as in the upper valley, but the Black Hall greenhouses are reaping a better harvest of cucumbers than in years of an early season. Some years boatloads of cucumbers come across the sound and load up our Connecticut cities; this will not happen this year, as the "cuke" season has but a few more weeks to run ere carnations and chrysanthemums must occupy the houses.

Thomas L. Brown of Black Hall has been appointed superintendent of products at the Connecticut Fair Association, Inc., of Hartford.

## Success In Market Gardening

REVISED AND ENLARGED EDITION.

A new and larger edition of this well known work on market gardening. It contains everything a market gardener wants to know, and in a form easily understood. It is an invaluable guide to any one in the business from the beginner to the most experienced.

PRICE \$1.10

Substitution of cheaper grades is thus easily exposed. Fresh sample brick, with illustrated book, mailed postpaid by manufacturers upon receipt of 40 cents in postage. Address

Trade Mark. American Spawn Co., St. Paul, Minn

In the towns of Black Hall and Lynn there are several millionaires that have private greenhouses and so much help that the head gardeners are able to distribute freely hundreds of vegetable and flowering plants that would be sold by those trying to make a living if they had a chance.

T. L. B.

### Packing and Shipping Vegetables.

Potatoes.—Irish potatoes, says the Southern Shipper, should be dug or plowed out and never left in the sun. Some experienced potato growers in Texas are so particular about this that they will only dig potatoes late in the evening so as to avoid sunshine as much as possible. Irish potatoes should be thoroughly cleaned from all dirt and carefully assorted as to size. Special machines are in the market for this purpose and we advise the use of the same by all shippers, as no potatoes less than 1½ inches in diameter should be offered for sale. Potatoes should be placed in new sacks, holding about 100 pounds.

Onions.—Onions as soon as ripe, should be pulled and if favorable, sunny weather, left on the ground several days, with the exception of the White Bermuda, which does not stand sunshine for any length of time. When thoroughly dried remove the roots and tops and pack and ship in standard crates. These measure 24 inches in length, 6 3/4 inches in width, 16 inches in depth, outside measurements, and hold about 57 pounds.

Cabbage.—When cabbage shows signs of hardness it should be gone over and cut for market. A light hatchet or a heavy butcher knife may be used. A limited amount of cabbage may be shipped to state markets by express in sacks (we prefer the crates), but the bulk of the cabbage crop must always be shipped in car lots for profit. As a rule cabbage is shipped in refrigerator cars, well iced, as it is very apt to heat. Pack only in standard crates 20 x 20 x 28 inches.

Celery.—As soon as celery has attained the full growth and is thoroughly bleached to a rich golden color, it should be dug, taken to the packing shed and roots trimmed. Tie in bunches of 12 stalks and ship in crates or barrels like cauliflower. Celery will go at the same weight as cauliflower. All Texas cities offer good markets for celery; in fact the demand has never been supplied with Texas celery, the most being imported from Colorado and Michigan.

**Peppers.**—The green peppers used for slicing as salads should be picked daily and packed in one-third bushel boxes or one-half bushel baskets. This variety of pepper will be found very profitable as the demand is very brisk during hot weather. The other peppers must be well dried and cured, packed in barrels or crates and offered to merchants and pickle factories. Very little pepper consumed in Texas is grown in Texas. The most of it is imported from Mexico and Louisiana, and we have always found pepper either in the green state or dry a profitable crop.

**Tomatoes.**—The most important feature that brings tomato culture to a successful issue is selection and packing, says the Southern Shipper. The most favorite package is the four basket crate. Tomatoes should be graded as to size and color—Nos. 1, 2, 3. No. 1 the ripest, for close shipment; No. 2, for further shipments, and No. 3 for farthest shipments. It is folly to run the three grades together, as loss invariably follows this mode. Small, inferior tomatoes should not be shipped at all. When you place inferior tomatoes with your good ones, the good stock has to pay the freight on the poor, and you will likely get nothing for your shipments. It pays to grade. While this applies to all vegetables, it certainly does to tomatoes. The express companies must take one-third bushel boxes of tomatoes at 15 pounds, and 4-basket crates at 20 pounds. Shipping in car lots tomatoes must be well iced.

**Egg Plant.**—As soon as ripe, which will be noticed by a dark blue color, egg plant should be nicely packed in one bushel crates or barrels and shipped by express to northern markets, always marking the number of egg plants outside on the crates or barrels. Egg plant sells from \$1 to \$3 per dozen early in the season and is in good demand in all markets.

**Melons (Cantaloupes).**—Cantaloupes should be pulled from the vines about two day before they are ripe. In crating take hold of one end with the thumb and the second and third fingers on the other, and by a slight pressure you can readily detect any "soft ends" which must be thrown out. Now you look the melon all over for any faults that may appear, and if it is O. K. place it solidly in the crate, taking care not to bruise it, and at the same time to have the crate well filled, so there is not a loose melon in it. Do not put in a green melon and make it a rule to put in only what you would be willing to buy. Get the crates into the iced car as soon as possible, if to go by freight. The standard crate is 12 x 12 x 24 inches, and the standard pack is 45 melons to the crate. As there is no estimated weights on cantaloupes the express companies charge 50 pounds for each crate which is entirely too much and we do not advise the shipping of cantaloupes out of the state by express as there is no money in it. Thousands of crates of cantaloupes could be sold in northern markets if a reasonable express rate could be obtained. As it is, even if they sell at high prices, the charges absorb all profit. We advise to ship cantaloupes in car lots only.

#### Experiments With Vegetables.

Onions, cabbages, and tomatoes were all experimented upon with very marked results at the Agricultural College, Guelph, Ont. It was found in the case of both onions and cabbages a ready response was got from the application of soluble nitrogenous fertilizers, particularly in the case of the cabbage crop. Cabbage being a leaf

**THE PULVERIZED MANURE CO. 35 Union Stock Yards, Chicago**

*Mention the American Florist when writing*

crop, and the nitrogen being the constituent that stimulates leaf and stem growth more than all others, this is readily explained. In fertilizing cabbages with nitrate of soda, it should be applied in three applications, rather than all at once, owing to the soluble nature of the material. It must be remembered also that it is most needed in the earliest stages of growth, particularly so in cold and backward seasons.

In the case of onions, fresh stable manure is to be avoided on account of weed seeds, and also because it favors the growth of the onion maggot. Stable manure is preferably used on soil two years before planting onions. An excess of nitrogen delays the ripening and injures the keeping quality of onions.

#### Prices of Indoor Fruits and Vegetables.

New York, June 11.—Mushrooms, 60 cents per pound; cucumbers, cold frame, 30 cents per dozen; lettuce, cold frame, 37 cents per dozen heads; tomatoes, 12 cents to 17 cents per pound; grapes, Hamburgs, imported, \$1.10 per pound; Hamburgs, domestic, \$1 per pound; Gros Colman, \$1.25 per pound; Muscats, \$1.65 per pound; peaches, English, \$5 per dozen; Belgian, \$7 per dozen; nectarines, \$7 per dozen; Florida watermelons, \$1 each.

Chicago, June 15.—Mushrooms, 40 cents to 50 cents per pound; cucumbers, 40 cents per dozen; leaf lettuce, 20-22 cents per box; head lettuce, home-grown, 75 cents per tub; wax beans, 75 cents to \$1.25 per box; tomatoes, \$2-\$2.25 per crate.

## The Nursery Trade

**American Association of Nurserymen.**  
W. P. Stark, Louisiana, Mo., President;  
E. S. Welch, Shenandoah, Ia., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-sixth annual convention to be held  
at St. Louis, Mo., June, 1911.

THE meeting of the American Peony Society at Boston is reported on page 995.

VISITED CHICAGO: F. F. Scheel, Shermerville Nursery, Shermerville, Ill.

FULL proceedings of the Denver convention of the American Association of Nurserymen will be found on page 994.

YOUNGSTOWN, OHIO. — The Idora Floral & Landscape Company has been organized by William Bakody and Frank Amant. It is the intention of the firm to engage extensively in the nursery business. Five acres will be utilized for a garden and ground has been broken for the greenhouse which will cover 22,000 square feet.

GROWERS in the United States and Canada who exhibited their orchard products in competition at the second National Apple Show last fall, will be requested by the board of trustees to give their views upon questions governing variety ratings, entering and judging of exhibits at the third exhibition in Spokane, Wash., November 14 to 19, when \$25,000 will be distributed in prizes and trophies in the various contests, which are free and open to the world.

THE souvenir book issued for the thirty-fifth annual convention of the American Association of Nurserymen is a most interesting little publication. It describes, under the headings of various western states, the progress and development of horticulture in these states and gives portraits of some of the leading members of the trade and short descriptions of their places. Denver, the convention city, is interestingly written up and the little book is well worth keeping as a souvenir of a most successful and enjoyable meeting.

### Budding Roses.

ED. AMERICAN FLORIST:—

When is the proper time to graft roses outdoors? E. J.

Grafting, as usually understood, is not practiced with outdoor roses. They are grafted in cases under glass at almost any time of the year when needed. Budding, which is, of course, a form of grafting, is carried out in June. Standards are produced by budding on briars at the desired height, the buds being inserted on the young shoots that push from the top. Dwarf roses are produced by budding low down on manetti, seedling brier or other stocks at this time. The stocks should have been planted and earth drawn up to the first three or four inches above ground to keep the stems from hardening. This is removed before budding of course. Budding consists of taking a bud, with a piece of the bark attached about an inch long, from the variety it is intended to propa-

pink the size of a peach bloom, berries jet black, oblong in shape, sweet, and have a port wine flavor. It throws its fruiting canes from the main canes 12 to 18 inches long by 10 to 12 inches wide, having 50 to 100 blooms and later fruits. Almost all other blackberries, have 10 to 15. The Giant Himalaya is also fine for covering old buildings, walls, summer houses, etc. It looks fine trained to a post in the lawn, tying the canes to the post. When they reach the top, pinch them back (say 2 inches) they will then branch out and form a bush or weeping tree, that is a beautiful sight in July with its shell pink blossoms. It crops here in Michigan from July 15 to frost, the main crop being produced in September and October.

There are three varieties of Himalaya berries, the Giant Himalaya, the common Himalaya and a dark-leaved Himalaya. The dark-leaved is an ornament for lawns or shrubbery rather than a commercial berry. We have the three varieties growing here at Berrydale, but only recommend the Giant Himalaya berry. This we believe to be the hardiest berry grown in the United States today.

#### Rubus Spectabilis.

This is the earliest of the many species of rubus to flower, and it frequently happens that flowers can be found before the middle of April, whilst it is in full bloom by the end of the month. It is a native of California, says the Gardeners' Magazine, and belongs to the raspberry group of the genus. During winter it may be readily distinguished from other species by reason of its light brown stems, which are very conspicuous; in fact, where colored stemmed plants are encouraged, it is well worth including for the sake of the bark alone. The flowers are rose purple, and borne from the leaf axils of last year's shoots. They are not very large, being about three-quarters of an inch across. The fruits are orange-colored, and ripen early in June, but are not of much value, being rather insipid. Planted in light loamy soil it suckers freely, and grows rapidly into a large mass. If the best winter effect is desired it is necessary to prune away the old shoots as soon as the flowers

Sweet-Scented Annuals for the Garden.

Among the vast array of hardy and half-hardy annuals which are available for culture in this country, it is surprising how few of them are really fragrant. It is true that among them we find a few that can lay claim to be included in the front rank of sweet-smelling flowers, but, generally speaking, most of the annuals grown in gardens today are devoid of scent that is agreeable to most persons. The sense of smell differs, of course, in different people, and I have known those who have a partiality for the pungent smell of African and French marigolds, nasturtiums and similar flowers; but the scent of these can scarcely be included under the title of this article.

Although, comparatively speaking, fragrant annuals are so few, there is a good number to select from, many of which are but little known. That these sweet-smelling and easily grown plants are not cultivated nearly so extensively as their merits deserve I think no one will deny; and as the time of sowing is now with us, attention drawn to some, at least, of them may result in their inclusion in many gardens where they have hitherto been omitted. A flower without scent is, to the writer, only half a flower. True, we may have graceful outline, delicate colors, freedom of flowering and a perfectly shaped plant, but without fragrance the life of the flower seems missing. Of course, I realize that scentless flowers have their uses; but where we can combine the good points named above with a delicious fragrance, surely the usefulness of the plant is considerably enhanced.

Undoubtedly the most popular fragrant annual of today is the sweet pea, and as it is so universally grown, more need not be said of it here. Following it closely in popular favor comes mignonette, a plant that has found a place in our gardens for many years almost solely on account of its fragrance. It has not the showy colors and graceful outlines of the sweet pea to commend it to our notice, yet few owners of gardens would care to be without it. Next must come the annual stocks. Those known as ten-week stocks and several other strains of annual varieties are well known, and their fragrance, which is reminiscent of old-world gardens, is highly appreciated. A humbler and not so well known member of the stock family is the night-scented stock, a dwarf-growing slender plant that in the day-

Specimen 10-in. and up \$2 50.

time has the appearance of a collection of withered, wire-like shoots. But take a stroll round the garden in the evening, just at dusk and when the dew is falling, and behold! a transformation scene has taken place. The withered, wire-like shoots are studded with charming little cross-shaped flowers of lilac hue, which are sending their delicious fragrance far and wide. I know of no greater pleasure connected with the garden than to sit by an open window after a strenuous summer's day and inhale the fragrance of a clump or two of this insignificant-looking little annual.

Another plant, but of more imposing stature, that gives us the delicate fragrance of its flowers freely in the evening is the sweet-scented tobacco plant, *Nicotiana affinis*, a tall-growing half-hardy annual known to most readers. In addition to the type, we now have the many beautiful colored hybrids of this plant, which are equally as sweet-scented. A half-hardy annual that is seldom met with, but which possess a delicate fragrance, is *Marytynia fragrans*. It is not one of the easiest plants to cultivate, and seedlings must be raised under glass. It grows from 12 inches to 18 inches high, has woolly leaves and large pinkish flowers, which are followed by large pods, each of which has a sharply hooked end. In addition to its fragrance, this plant is interesting as showing one of nature's many methods for the distribution of seeds.

## American Beauty PLANTS

A few thousand nice plants, 2½ and 2½-in. pots.

**John Burton,**  
Chestnut Hill, Phila.

## ROSES, Prime Stock, On Own Roots

Varieties and prices page 972, June 11.

**THE LEEDLE FLORAL COMPANY**  
SPRINGFIELD-OHIO

Sweet sultans are known to most of those who have gardens of even the smallest size, but it may not be so generally known that yellow-flowered varieties can be obtained. The pink family gives us several plants that are either annuals or can be grown as such, notable among them being *Dianthus lacinatus* varieties and the Indian and Japanese pinks.

## Alternanthera JEWEL

We can still supply first-class plants of this magnificent new bedding plant. If you buy now, you will be able to have stock for another year. To clean out, we will make a special price of \$1.50 per doz.; \$10.00 per 100.

## Gardenias

We can quote you in any quantity. 3 in. \$18.00 per 100; 2½ in. \$12.00 per 100. Getting down on 'mums, but still have a few thousand at \$25.00 per 1000.

**BYER BROS.,** Chambersburg, Pa.

NEW CASTLE, IND.—The sale of a half interest in the Weiland & Olinger greenhouse plant, comprising 21 greenhouses east of the city, three retail houses near the Union depot and a retail store in Cincinnati, was announced June 5. Peter Weiland, who has had charge of the business, disposed of his interest to his partner, Peter Olinger, of Cincinnati, who is now sole owner. The price was \$30,000, and was paid in cash. Mr. Weiland will not permanently quit the business, but has been troubled with rheumatism and will rest for several months, when he will erect a modern range of 10 houses on his farm of 57 acres west of the city, which he purchased several years ago of Mahlon Harvey. The site is ideal for such an institution, as coal can be unloaded directly into the furnace room from the Big Four, which adjoins the land.

## Some Good Heleniums.

The heleniums give us many bright flowers, but the color is not confined to the yellow hues of so many of our autumn composites, seeing that we have some with blooms with crimson stripes and markings. For giving quantities of bloom in autumn they are particularly useful, says Gardening Illustrated, and they go well with the starworts either in the garden or cut for the house. All are easily cultivated in a good, rather rich soil, and are propagated by division or, in the case of some, by seeds sown in the open in April, May, or June, and under glass earlier, if need be. A sunny border is the best for these heleniums.

H. autumnale grows about four feet high, and gives quantities of fair-sized, pretty yellow flowers. H. A. superbum is a fine variety. H. Bigelovi grows about four feet high, and bears freely good-sized yellow flowers, whose beauty is heightened by the contrast with the dark-brown color of the central disc. H. Bolanderi is a handsome, dark-centered helenium, with fine, yellow rays. The height is only about two feet. It flowers earlier than the majority, and is welcome for summer bloom.

Although, botanically, only varieties of H. autumnale, the forms introduced as H. grandicephalum are generally listed under the latter name in catalogues, and, consequently, are more conveniently named now. H. grandicephalum striatum is a tall grower, the flowers yellow, striped with crimson. Other forms are the orange-yellow aurantiacum, the dwarf compactum bicolor, of a good yellow, and having a rich crimson center, and cupreum, a fine dwarf variety, with flowers striped with crimson and gold.

In H. Hoopesi we have a pretty helenium, reaching about three feet in height, and coming earlier into bloom than almost any of its allies. It has large, deep yellow flowers of considerable beauty. H. pumilum, one of the best of our late summer and autumn border plants, is about two feet high, and bears yellow flowers, with pretty ray petals and a neat yellow central cone.

## Cleveland.

June, the month of roses and weddings, is having enough of both. Roses of all kinds are abundant and the call for long-stemmed stock for bridal bouquets bears out our other statement. The call for orchids is also good, Cattleya Mossiae being the best seller. Long-stemmed American Beauties are selling well and the quality was never better. Local peonies are coming in and are of excellent quality; large flowers and long stems, they make about the best show for the money anyone can buy. Lily of the valley has moved very slowly this week, somewhat against expectations. Sweet peas have been scarce, but several growers will soon be in with a good supply of long-stemmed ones. Easter lilies have not moved very quickly, although the supply is abundant. Greens of all kinds are

more plentiful. Carnations are almost too plentiful, there being more on the market than can be used up in regular business, and large quantities go to the street fakir at ridiculously low prices. Roses of all kinds are meeting with a good demand, the flowers being in good shape for this time of the year owing to the cool weather we have been having.

Alfred Tilton, of Tilton & Son, died at the age of 76 at his residence, 3329 Walton avenue, and was buried Saturday at Riverside cemetery. He has been for many years associated with the seed business in this city.

This vicinity was visited by a severe hailstorm Monday afternoon, lasting about half an hour. The hail, however, was not heavy enough to do any damage to glass.

A. M. Albrecht, Prospect avenue, is the first florist here to give trading

stamps with every purchase, an ad. to that effect appearing in a local paper recently.

H. Piggott, who formerly conducted a retail store in the Taylor arcade, has taken H. Thrum's place on Cedar avenue, where he will do a general retail business in cut flowers and plants.

F. Riley, who was with the Smith & Feters Co. several years ago, is now with Kirchner's on Quincy. Mr. Riley has been in the east for some time.

**D. H. GREEN,** West Grove, Pa.

Providence.

A large list in the mortality space and a steady transient trade have kept the business a little above the average for this season of the year during the past week. Roses are coming in in great quantity and of a very good quality, owing to the extremely cool weather for this season of the year. In fact, first-class roses are a glut at the present time and can be had at the buyers' price in large quantities. Carnations are on the decline with some of the growers, but there is still enough of first-class quality to supply all demands at summer prices. Sweet peas are coming in in great abundance, of first-class quality and selling well. Lily of the valley is moving steady owing to so many weddings and social functions, and the same may be said of gardenias and orchids. The demand for bedding plants is very good for so late in the season and most of the growers are sold out of this stock.

### NOTES.

Burke & Burns is the style of the new concern that has bought out Wm. Hay's place on Dyer avenue. Mr. Burke had been employed on this place for the past 16 years.

John S. Kelly, formerly of J. F. Ward, received a notice during the past week that he has just fallen heir to a legacy, through the death of an uncle, of \$10,000.

A. W. Smith of Johnston lost 40,000 tomato plants and an acre of grape vines by the severe frost we had in this vicinity on June 5.

Bert West, foreman for Thos. Curren, resigned his position during the past week and is now employed by Wm. Hay.

### Smooth Sumach.

RHUS GLABRA.

This is quite as handsome a shrub as the staghorn and is preferable for ornamental planting. It does not grow quite so large and has a more spreading irregular habit. It occurs only rarely in northern Vermont but is common in the Hoosac and southern Connecticut valleys. A cut-leaved form of this species is also found in the trade. The leaves were formerly used for tanning, and the berries, because of their acidity, were employed as a substitute for lemon juice in various domestic practices and in the preparation of home remedies. The berries are used in dyeing, an infusion being said to furnish an unequalled black dye for wool. There is also a dwarf sumach (*Rhus copallina*) which is of value in ornamental planting. It thrives in light sandy soils.

### Growth of Trees.

Considerable uncertainty exists as to the time necessary to grow merchantable timber, but only upon an exact knowledge of such things can a satisfactory policy of forest management be based. According to a writer in *Forest Leaves* the time required for various kinds of trees to reach a diameter of 12 inches is as follows: pin oak 40 years, black oak 50 years, red oak 58, white oak 100, sweet gum 62, walnut 56, tulip tree 50, black locust 45, ash 72, hickory 90, catalpa 20, Carolina poplar 12. Of

Mention the American Florist when writing

course the character of the soil, water supply and location have much to do with the slow or rapid growth of trees, but these figures seem fair averages. As to the time required for greater diameters the same writer gives records of actual counts for various trees, some of which are added here: Hackberry 25 inches, 115 years; elm 27 inches, 120 years; sugar maple 38 inches, 155 years; sycamore 57 inches, 260 years; tulip tree 57 inches, 225 years; sour gum 25 inches, 141 years; beech 36 inches, 165 years; black willow 18 inches, 50 years.

## Chrysanthemum Cuttings

Now booking orders for June delivery.

## Gorham & Chapline Printery Inc. CATALOGUES PRICE LISTS.

HALFTONES, ENGRAVINGS and  
PRINTING FOR FLORISTS.

358 Dearborn Street, CHICAGO.

IF YOU SAW IT IN

## THE FLORIST

SAY SO IN YOUR NEXT ORDER.

## Do You Re-Bench This Year?

Here It Is....

Ask the Man who has one.

The "King Pecky Cypress Bench" cut and fitted ready to put together.

No Waste.

It is the best "Pecky" bench on the market.

Have you seen our "New Bulletin No. 35" which describes the Iron Frame House, and gives the opinion of men who have them?

Mailed on request.

KING CONSTRUCTION CO., North Tonawanda, N. Y.

## Have You Ever—

Talked with a brother florist who uses Morehead Return Steam Traps? If not, do so at first opportunity and be convinced that you must install one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

## Gold Letters

Gummed Gold and Purple Letters.

For inscriptions on Floral Designs.  
Best and Cheapest on the Market.  
Send for samples and prices.

day for  
Prices and  
Booklet.

NATURAL GUANO COMPANY,

Aurora, Ill.

Lexington, Ky.

Retailers generally, have expressed themselves as well pleased with the business of Memorial day. Everything in flowering plants was cleaned out and more could have been disposed of. The weather conditions were favorable, the supply enormous, with prices about the same as in previous years. Roses are in fairly good supply at present and there is a good demand for them. Carnations are becoming somewhat smaller owing to the hot weather, and they retail for 50 cents and 75 cents per dozen. Sweet peas sell for \$1 per 100 blooms. Green goods are not in as good supply as they have been. All the plantmen have about finished planting beds and they all report much better business than last year. Some of the growers sold 4-inch geraniums for \$1 per dozen this spring, but those that held up their prices had no trouble in disposing of them at \$1.50. Cannas were also in good demand this year, King Humbert especially.

#### NOTES.

Everything is about cleaned out in bedding plants at the J. W. Keller Estate, and they are now very busy getting soil ready for planting roses, carnations and chrysanthemums. All their carnations will be planted from pots this year. Bernard Eggers, formerly with S. M. Harbison, Danville, is now rose and carnation grower at this place. Mr. Eggers is a good grower and we all wish him much success in his new field.

August Le Clere has everything in first-class shape at the Eastern Kentucky lunatic asylum on West Fourth street, of which he has charge. Mr. Le Clere deserves much credit for the beautiful beds which he has at that place every year.

Otto Heberling, of the Georgetown Floral Co., was a welcome visitor here recently and called on the boys at the J. W. Keller Estate on East Sixth

## The "Meyer Green Silkaline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also Violet Thread for tying up Violets. Price of both, \$1.25 per lb.

For sale by all first-class supply houses. If your dealer does not carry it in stock, write us direct, giving us his name.

**JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.**

## Evergreen Brand Flower Fertilizer.

A Pure Plant Food immediately available. It permanently enriches the soil. It prevents the onslaught of plant diseases or insect pests. Can be used at any time during the growing season, dry or in solution. Put up in 12 pound cans, Price, \$2.00 each.

**For Sale by Leading Jobbers**

Further information can be obtained from

**D. D. JOHNSON CO., Manufacturers,**  
64-66 Wabash Ave., CHICAGO.

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods,

and the Mastin Whitewash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

**J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.**

## Cattle Manure in Bags Shredded or Pulverized

Pure—dry—uniform and reliable. The best of all manures for the greenhouse. Florists all over the country are using it instead of rough manure.

### Pulverized Sheep Manure

Absolutely the best Sheep Manure on the market. Pure manure and nothing else. The best fertilizer for carnations and for liquid top-dressing. Unequalled for all field use. Write for circulars and prices.

**The Pulverized Manure Company**  
32 Union Stock Yards, Chicago.

street. Mr. Heberling has been sick for some time.

The Michler Bros. Co. had the contract for filling the beds at the court house this year. Several window boxes and vases were also filled at that place by the same firm.

Anderson & White, the lady florists on Georgetown street, have had a good plant business this year.

L. C.

ASHLAND, MASS.—Ernst Warren has under construction a large greenhouse, in connection with his Union street place.

Has stood the test of over a Quarter of a Century.

Tweed Vineyard, Clovenfords, Scotland

MILLBROOK, N. Y.—Special greenhouse contractors from New York have been busy here putting new pipes throughout all of the greenhouses at Daheim.

**THE** combining of greenhouse and gardener's cottage in some such way as this, makes a handy arrangement for our gardener friends.

This house is 18 feet wide and 33 feet long, and has two compartments. It is small, but it's "a starter," and other compartments are easily enough added. Sometimes it is just as well to start small, and then make additions when required.

When you do build make it our Iron Frame Construction—Curved Eave if you say so. Send for circular.

**Hitchings & Company,**  
1170 Broadway, New York.

## THE STANDARD VENTILATING MACHINERY

The original machine with self-oiling cups. The most powerful, least complicated, very compact, with ease of operation.

### The New Duplex Gutter

Over six miles in use and highly recommended by all. The only Drip Proof gutter on the market.

### The Standard Return Steam Trap

It has no equals for simplicity or its working. Catalogue free.

**E. HIPPARD, Youngstown, Ohio.**

### The Paris Flower Show.

The Paris flower show, which opened June 1, in the Cours-la-Reine, on the borders of the Seine, was one of the finest and most beautiful held here. New varieties and striking novelties were comparatively few, but in development and quality the flowers and plants surpass those exhibited in former years. Perhaps the most interesting—certainly the most instructive—feature was the "retrospective exhibition of the rose," organized by M. Gravereau, proprietor of the famous Roseraie de l'Hay. Here was found the complete history of rose culture. The point of departure is the earliest recorded specimen of the rose, which is the genus *rosa*, brought from the plateau of the Pamir, in Central Asia, known as "the roof of the world." *Eglantines* and wild roses of every country were shown. Some of the varieties were shown in the living flower, and others from Tibet, Iran, China and Japan were exhibited by specimens pressed and dried on botanical paper. The successive steps of culture by means of transplanting and by cross-breeding, in all stages were shown.

The Damascus rose, which was first brought to Europe by returning crusaders, and which gave a vigorous impetus to culture by cross-breeding in France and England, was on view here. Numerous varieties of roses from China, India and Japan, introduced into France in the eighteenth century by the French Compagnie des Indes, and preserved in the botanical collection of the Jardin des Plantes, were exhibited. The roses obtained by the Compagnie des Indes were crossed by Paris scientists with primitive French

roses, and this operation led to a great horticultural revolution, the outcome of which was the superb rose that in due course developed into such flowers as exist today in the gardens of America and Europe.

INDIANAPOLIS, IND.—Plans for a chrysanthemum show, to be held in Tomlinson hall early in November were laid by the State Florists' Association at a meeting held in room 12 of the State house June 10. It was definitely decided to hold the show, and the executive committee was instructed to appoint special committees to start work at once on the arrangements. The exact date will be fixed in the near future. This will be the first show held in five years.

### Manna.

Manna is collected from the tarfa, or tamarisk, the manna ash, the camel thorn, the larch, the cedar, the Australian Eucalyptus viminalis and even some edible lichens, such as Lecanora esculenta, and its allied species are known by this name. According to Burckhardt the manna from the tamarisk (Tamarix gallica) drops from the thorns, on the sticks and leaves with which the ground around these trees is usually covered and must be gathered early in the day or it will be melted by the sun. "The Arabs cleanse and boil it, strain it through a cloth and put it into leathern bottles, and in this way keep it uninjured for several years. The manna ashes (Fraxinus ornus, F. Europaea and F. rotundifolia), yield manna in consequence of a puncture made by an insect resembling the locust, known as Coccus mannifarus. The substance is fluid at night and resembles dew, but begins to harden in the morning. Fraxinus ornus was introduced into England in 1730 by Dr. Uvedale.

The camel thorn, which grows in Northern India and Syria, produces the description known as Al baj, or Persian manna. The larch and the famous cedars of Lebanon also furnish a manna of their own, but although prized and eaten by the natives of the countries where they are found, these kinds of manna do not seem to possess the useful properties of the manna ash, which is the manna of European commerce. The Australian Eucalyptus viminalis exudes crumbs of an edible manna, which is very sweet, and is used to produce the opaque drops called honey-manna, or melitose.

Of the edible manna lichens, Lecanora esculenta, and Lecanora tartarea, the coloring matter known as litmus is made. This kind of lichen is sometimes torn up and transported by violent gusts of wind and falls in showers several inches thick. In 1829, during the war between Persia and Russia, there was a great famine in

## The Superior Standard

### RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
 $\frac{2}{3}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market  
MADE IN NINE (9) SIZES FOR HOT WATER.

Send for catalogue and list of growers that are using this boiler.

**THE SUPERIOR MACHINE & BOILER WORKS, 840-850 Superior St., Chicago.**

452 W. Erie St. CHICAGO

Oroomiah, southwest of the Caspian sea. "One day during a violent storm the surface of the country was covered with lichens, which fell from the sky in showers. The sheep immediately attacked and devoured it eagerly, which suggested to the inhabitants the idea of reducing it into flour and making bread of it, which was found to be palatable and nourishing."

During the siege of Herat, there is mention made of a hail of manna which fell upon the city and provided the inhabitants with food. In April, 1846, in the government of Wilna, a rain of manna occurred, forming a layer upon the ground three or four inches thick. It was of grayish-white color, rather hard, irregular in form, inodorous and insipid. It is to be found in the great desert of Tartary, on the steppes to the north of the Caspian sea, in the Altai range, in South America and in Algeria.—Indian Planting and Gardening.

### Glen Cove, N. Y.

The annual summer show of the Nassau County Horticultural Society was held at Pembroke hall, June 8. Considering the season, the hall was well filled up and visitors were unanimous in their praise of the fine display. H. Turner, Walter Shaw and D. McFarlane were the judges for the day. H. S. Phips, Jr., Roslyn, was elected honorary member, two new active members were elected and two applications for membership received. The next meeting will be sweet pea night, several prizes being offered for the best exhibits. The following are the awards:

Collection of tea and H. T. roses.—G. B. Wilson, Roslyn, first.

Twelve distinct H. P. roses.—G. Ashworth, Glen Cove, first; G. Wilson, second.

Twelve distinct tea and H. T. roses.—H. Gaut, Glen Cove, first; G. Wilson, second.

Vase of H. P. roses.—Robt. Marshall, Glen Cove, first.

Vase of tea and H. T. roses.—H. Gaut, first.

Collection of rambler roses.—H. Gaut, first.

Collection of herbaceous plants.—J. Holloway, Glen Cove, first, showing 59 varieties, a very fine exhibit much admired by everyone; Mr. Holloway showed 20 varieties of pinks that made a most gorgeous display.

Three vases peonies, three varieties.—H. Gaut, first; J. Elmslee, Glen Cove, second.

Single vase of peonies.—H. Gaut, first.

Vase of delphiniums.—J. Elmslee, first.

Vase of snapdragons.—H. Gaut, first.

F. O. Johnson, gardener to Mrs. H. I. Pratt, Glen Cove, exhibited seven vases of roses which well deserved the cultural certificate awarded. Cultural certificate was also awarded to Julius Roehrs Co., Rutherford, N. J., for a splendid exhibit of orchids. Honorable mention was awarded to W. Ross, gardener to H. S. Phips, Jr., for two beautiful ferns, also a vote of thanks for a fine display of roses not entered for competition. V. Cleres received a vote of thanks for a fine campanula. E. Westerbe for a grand vase of roses. The winners of the monthly prizes were: G. Wilson for best pteris and adiantum; I. McDonald for the best nephrolepis. A cultural certificate was awarded to H. Fleishauer for a grand exhibit of sweet peas, roses and strawberries. Honorable mention to Paul Reul for vase of Frau Karl Druschky roses.

O. E. A.

## An Object Lesson to Florists

If this new Curved Eave House of ours is so light and attractive from the inside looking out, think what it must be as a florists' show house to those outside looking in!

Suppose it should cost a trifle more, it's worth it many times over in the unmistakable advertising you will get from it. Don't you see it is just like having an immense glass show case on the street, so that passers-by can look right in without an eave plate or gutter to obstruct their view?

Doesn't that appeal to you as looking like a mighty good business investment? Let's get together and do a little figuring—our pencil is already sharpened—the lead is hard and used to hard figuring. Shall we drop around and see you, or how about a little correspondence first?

## High Quality Not High Prices

Whenever we make a piece of material it is our aim to turn out the very best that can be produced; high quality is our object for nothing else will satisfy the man who wants to build a greenhouse and make a success. There can be no success without this striving after quality; without there be an effort to produce something better than was produced before. The man who believes in selling poor stock, low class goods, and gets what he can for his work, never progresses or succeeds permanently. We are working hard to make our construction more modern, to improve our patterns and our methods of manufacture, we must keep up with the times and stand at the head of the procession or drop out of the line. Prices are to be considered of course, in everything, but it's quality that counts after all. You forget the price but you don't forget the quality—

It's not what you pay but what you get for what you pay—that is economy.

### Kalmia Latifolia.

This most beautiful shrub is the laurel of southern New England. It is known by a variety of popular names; broad-leaved laurel, to contrast it with the other two; calico-bush, from its showy rose and white blossoms; spoonwood, from the use of its wood by the Indians for carving into spoons. Clamoun was the Indian name. The poisonous nature of this plant has already been discussed; fortunately, however, where its character is understood this is easily guarded against, hence there is no necessity to wage war on this beautiful plant. On the other hand, since it is easily transplanted, it deserves to be used far more than it is as an ornamental shrub, says a bulletin of the Vermont Experiment Station.

Lock the door before the horse is stolen,

## AMERICAN SEED TRADE ASSOCIATION

Twenty-Eighth Annual Convention at the Hotel Strand,  
Atlantic City, N. J., June 21-23.

### The Opening Day.

The twenty-eighth annual conven-  
tion of the American Seed Trade As-  
sociation opened at 10:30 a. m. at the  
Hotel Strand, Atlantic City, N. J., June  
21. The attendance of members was  
good, over 100 being present at the  
opening session. President Robinson's  
address was well received, as was that  
of Secretary C. E. Kendel and the  
reports of the various committees  
which occupied the remainder of the  
morning session.

At the afternoon session Geo. S.  
Green, Chicago, a member of the ex-  
ecutive committee, made an extended  
and important report for the commit-  
tee on legislation. Secretary Kendel  
read a report from the National Coun-  
cil of Horticulture and an appropria-  
tion of \$200 from the funds of the  
association was made towards the  
expenses of the work of the council.

Francis Brill then read his paper  
on "Past, Present and Prospective of  
the Seed Trade of America," and  
the remarks of this veteran seedsman  
were listened to with the greatest in-  
terest by all present. The paper by  
Curtis Nye Smith on "The Advance-  
ment and Protection of the Interests  
of the Seed Trade" was a finished and  
eloquent one as befitted the author,  
who is counsel for the association.

### Wednesday's Proceedings.

At the morning session on Wednes-  
day, W. Atlee Burpee read a most in-  
structive and interesting paper on  
"The Spencer Type of Sweet Peas,"  
Fresh from the latest trials on his own  
grounds in Philadelphia, Mr. Burpee  
was in an excellent position to speak  
with assurance on the newer types of  
this very popular flower, and the  
many good points brought out evoked  
a long and interesting discussion.  
Leonard Vaughan reported for the  
committee on ruling of the post office  
department on regulation of packages.

George H. Clark, of the Department  
of Agriculture, Ottawa, Ont., read a  
very able paper on "Methods and

Apparatus for Seed Testing by Seed  
Merchants." The author treated his  
subject in a most exhaustive manner,  
showing himself thoroughly acquaint-  
ed with up-to-date methods of seed  
testing. His lecture was illustrated  
with samples of the work. Several  
new members were elected. A steamer  
excursion at five o'clock was a pleas-  
ant feature of the day's proceedings  
and at 9 p. m. all were entertained at  
the annual banquet, an excellent menu  
being done full justice to.

### Those Present.

Among those present or represented

### Customs Officers and Nursery Stock.

At the request of the secretary of agriculture, made with a view to preventing the introduction into the United States of plant diseases and injurious insects, collectors of customs at ports of first arrival of shipments of nursery stock or living plant material are instructed to communicate promptly to the Secretary of Agriculture (bureau of entomology), Washington, D. C., the receipt of such shipments, with the name of the port of delivery, the name and address of the ultimate consignee, and the place from which exported, says Treasury Decisions, May 26, 1910. Collectors at ports of delivery of such shipments will make similar report to the representative of the Department of Agriculture for the state to which the consignment is destined (as per list appended), duplicate report to be forwarded to the Secretary of Agriculture (bureau of entomology), Washington, D. C. The following are the local representatives of the Department of Agriculture engaged in the inspection of imported nursery stock:

Alabama: Prof. R. S. Mackintosh, Alabama Polytechnic Institute, Auburn.  
 Arkansas: C. F. Adams, state inspector, Fayetteville.  
 California: Hon. J. W. Jeffrey, commissioner of horticulture, Sacramento.  
 Colorado: Prof. C. P. Gillette, Agricultural Experiment Station, Fort Collins.  
 Connecticut: Dr. W. E. Britton, state entomologist, New Haven.  
 Florida: Dr. E. W. Berger, Agricultural Experiment Station, Gainesville.  
 Georgia: E. L. Worsham, state board of entomology, Atlanta.  
 Idaho: J. R. Field, state horticultural inspector, Boise.  
 Illinois: Prof. S. A. Forbes, state entomologist, Urbana.  
 Indiana: Benj. W. Douglass, state entomologist, Indianapolis.  
 Iowa: Prof. H. E. Summers, Iowa State College, Ames.  
 Kansas, northern half of state: Dr. T. J. Headlee, Agricultural Experiment Station, Manhattan; southern half of state: Prof. S. J. Hunter, University of Kansas, Lawrence.  
 Kentucky: Prof. H. Garman, Agricultural Experiment Station, Lexington.  
 Louisiana: J. E. Garrett, state crop pest commission, Baton Rouge.  
 Maine: E. F. Hitchings, state entomologist, Augusta.  
 Maryland: Prof. T. B. Symons, state entomologist, College Park.  
 Massachusetts: Dr. H. T. Fernald, state nursery inspector, Amherst.  
 Michigan: Prof. L. R. Taft, Michigan Agricultural College, East Lansing.  
 Minnesota: Prof. F. L. Washburn, state entomologist, St. Anthony Park.  
 Mississippi: Prof. R. W. Harned, Experiment Station, Agricultural College.  
 Missouri: State Fruit Experiment Station, Mountain Grove.  
 Montana: Joseph W. Wallisch, Secretary State Board of Horticulture, Hirbaur Block, Butte.  
 Nebraska: Prof. Lawrence Bruner, University of Nebraska, Lincoln.  
 New Hampshire: C. W. Stone, state nursery inspector, Durham.  
 New Jersey: Dr. John B. Smith, state entomologist, New Brunswick.  
 New York: George G. Atwood, State Department of Agriculture, Albany.  
 North Carolina: Franklin Sherman, Jr., state entomologist, Raleigh.  
 Ohio: N. E. Shaw, State Department of Agriculture, Columbus.  
 Oklahoma: Charles F. Barrett, secretary, Oklahoma State Board of Agriculture, Guthrie.  
 Oregon: H. M. Williamson, secretary State Board of Horticulture, Portland.  
 Pennsylvania: Prof. H. A. Surface, Department of Agriculture, Harrisburg.  
 Rhode Island: Prof. A. E. Stene, College of Agriculture and Mechanic Arts, Kingston.  
 South Dakota: Robert Matheson, state entomologist, Brookings.  
 Tennessee: G. M. Bentley, state entomologist, Knoxville.  
 Texas: Judge E. R. Kone, state commissioner of horticulture, Austin.  
 Utah: J. Edward Taylor, state inspector, Salt Lake City.  
 Vermont: Prof. M. B. Cummings, Agricultural Experiment Station, Burlington.  
 Virginia: J. L. Phillips, state entomologist, Blacksburg.  
 Washington: H. F. A. Huntley, commissioner of horticulture, Kennewick.  
 Wisconsin: Prof. J. G. Sanders, Agricultural Experiment Station, Madison.

### Changes in the Art and Business of Growing and Handling Seeds.

BY DR. W. W. TRACY.

Among the many changes in commercial practice of the past 20 or 50 years, none have been more marked than those in the seed trade. Formerly most gardeners either saved their own seeds or secured them from some neighbor, much in the way the farmer secures his grain seed today. Buyers of garden seeds were few and the amounts of the purchases small. Today seed buyers are everywhere, ranging from the woman who, though she lives in a three-room apartment on the sixth floor, buys on bargain day five packets of seed for a nickel because "they cost five cents" apiece in the seed store and the clerk said she could

Marshall H. Duryea.

Vice-President American Seed Trade Association.

grow fine radishes and lettuce in a window box," to the trucker who annually buys 1,800 to 2,000 pounds of cucumber seed and one or two hundred pounds of cabbage seed for planting on his own farm. Fifty years ago there was scarcely more than a dozen firms in the United States whose special business was the growing and dealing in seeds. Today the membership of the American Seed Trade Association, limited to those whose chief business is the growing and handling of seeds is over 200 and the members actually engaged to a greater or less extent in the seed business may be numbered by the thousands.

The American Florist Co.'s Directory mentions 98 firms in Illinois, and 171 in New York state, who deal in seeds. In no trade is the art of developing and even creating a demand for their stock more skillfully and successfully practiced than by the seedsmen whose annual catalogues are recognized as among the most attractive of modern commercial publications. These changes in commercial practice,

together with the marvelous growth of our country in numbers and prosperity have resulted in an enormous increase in the bulk and value of seed sold. It is difficult to even estimate the actual amount of this trade, for it is the policy of most firms to keep the actual amount sold and the source of their supply a business secret.

### OLD-TIME IMPORTATIONS.

Fifty years ago the American seedsmen imported the bulk of his stock, growing only a few species and those in limited quantities on his own farms, or those in his immediate vicinity, and under his own personal supervision. Today more than a score of firms, styling themselves seed growers, devote their entire energy to the simple production of seeds, and seeds as "seed" is the most important crop on thousands of American farms. While these changes commenced some 50 years ago they were very slow and small at first, and have not become important until within the past 25 years. We think that the increased rapidity of change was due in no small degree to the work of our national Department of Agriculture, our state experiment stations, and last, but by no means least, to the influence of THE AMERICAN FLORIST, in popularizing and making available to the general public the work of practical growers and dealers as well as that of the scientists connected with public institutions.

Even the discussion of the objectionable features of the congressional free seed distribution and proposed legislation against the sale of poor seed has done much to attract public attention to the importance of quality in seeds. Fifty or even 25 years ago, American grown seed of most vegetables was considered, possibly justly so, quite inferior to European. Today, thanks to the advantages of American soil and climate and the quickness of the American grower to make the most not only of natural advantages but of the knowledge obtained by experience, we produce seed of most vegetables of better quality, in greater abundance, and at less cost than the Europeans, and this to such a marked degree with some species that Europe now looks to us for her supply. Changes in quality, however, have not been more marked than those in quantity.

### SIZE OF ORDERS THEN AND NOW.

The best conception of the magnitude of change in this respect may be got through illustration. Twenty-five years ago a single firm considered 40,000 pounds of cabbage seed ample provision for its yearly trade; today this firm, with no marked increase in the proportion of its business to that of the entire seed trade of the country, provides for over 250,000 pounds of cabbage seed, and whereas 25 years ago it was constantly on its guard against an over supply, today its chief anxiety is that there may be no shortage of crop. Nor is such increase peculiar to cabbage; the same firm's provision for cucumber seed is today over 10 times what it considered ample 25 years ago. Nor is such increase limited to a few firms. Another firm provides for over 20 times as many bushels of peas as it considered ample 25 years ago. So much as to increase in the amount of seed sold.

A SELECTED COMPACT GROWING VARIETY OF HYBRID CAMASSIA. (BURBANK)

As to quality, there is no doubt but that the seed handled today by the best dealers is fully equal or superior in many respects, particularly in cleanliness and vitality, to that of 25 years ago, but its quality as to trueness and uniformity of varietal type, as compared with the better general knowledge of the importance of these qualities, and as to what good seed should be, we fear has not been improved. Our best seedsmen recognize this and even complain that it is now very difficult, if not impossible, to get stock even equal in these respects to that of 10 or 20 years ago. To what is this want of improvement, even possible deterioration, due? We believe that the root of the difficulty is the gradually increasing separation and want of recognition of the unity of interest between the seed dealer and the seed producer, the farmer who actually grows the seed. Fifty years ago the growing of the seed was as much a part of the seed business as the preparation of the catalogue, and the fixing of the price, or the packing of the seed. It is not so regarded today; a large proportion of the seed is actually grown by men with no interest in the art of seed growing but who grow seeds simply as a matter of convenience, and often only because the use of seed for a seed crop is most easily obtained.

#### IMPROVED MACHINERY.

The greatest change in the practice of seed growing has been along the line of the American tendency to reduce cost through the use of improved machinery and by methods which lessen the amount of hand labor. There is also a decided increase in the degree to which seed is produced as a sort of side product of some other industry, and the products of many

fields originally intended for canning find their way to the seedsman. It seems to me that in magnitude the seed trade, at least that in garden seed, has about caught up with the business growth of the country and that its growth in the next 25 years must be far less rapid than it has been in the past, but there is a possibility of a material betterment in the quality of the seed handled and we think this will come through the dealer coming into closer touch and sympathy with the actual seed producer or farmer.

We believe too that there is a possibility of an enormous increase in the amount of farm seeds handled by seedsmen. The importance of the use of pure and well grown seed of a varietal character best suited to the local conditions as a most important factor in determining the profitability of ordinary farm crops is just beginning to be recognized. The growing and using of specially grown farm seed are in very similar condition today to that of garden seed 50 years ago, and we believe that we may expect a corresponding development in the growth of better farm seeds, and that 25, 20, possibly 10 years hence, the wise farmer will no more think of taking his seed grain from the bin or crib than the gardener will now use what is left from his present crop as seed for the succeeding one. If such change in practice should develop, the possible future growth of the seed trade would be almost limitless.

SALEM, MASS.—E. A. Stearns has purchased the Ward greenhouse on North street, and will conduct the business under the firm name of Stearns & Lake.

#### Burbank's Hybrid Camassias.

Camassias are not as much grown as they deserve, being free flowering, perfectly hardy and ornamental plants, fine for the herbaceous border or for cutting. They are natives of the United States and Mr. Burbank has had them in hand some time, his hybrid forms being much improved in length of stem or rather in the number of flowers open at one time on the stem. They are easily propagated by division though not as freely as some other bulbous plants but seed freely and this forms a ready means of increase.

#### Camas.

The genus camassia is represented in the eastern states by a single species, *C. Fraseri*. It seems to be rather sparsely scattered over the region extending from the mountains of Pennsylvania and Georgia to the edges of the great plains. I have found it near the source of the Neasho river in Kansas. This is probably near its western limit. I have never seen a locality in the east where this camas made up any considerable part of the flora; but as soon as one crosses the great divide and begins to descend the Pacific slope the different species of camas begin to be abundant and in some places they make up a large part of the vegetation. Five or six species are found in the west, the most abundant being *C. esculenta*.

In the early days this plant was exceedingly abundant on the prairies of eastern Washington and northern Idaho. Old settlers of Camas Prairie in northern Idaho tell how, when they first reached the summit of Craigs Mountains, the whole magnificent plain lay stretched out beneath them,

blue as a summer sea with these blossoms. Agriculture and herding have driven the camas in large measure from the Clearwater and Palouse prairies. They are now to be found only in fence corners and out-of-the-way places; but farther back in the midst of the forests are many meadows where it still flourishes. These meadows vary in size from an acre to several hundred acres and all are encircled by the dark wall of the forest. Some of the larger meadows have been "taken up" as homesteads and the settlers cut the camas every year for hay. The word camas is derived from the Indian name for the plant. As is usual with primitive peoples the name was not restricted to one kind of plant but was applied to several species which do not belong to the genus *camassia*. One species of brodiaea was called "blue camas" and a certain poisonous *zygadenus* was called "death camas." Camas bulbs formed the chief food supply of some of the Indians of the northwest. They baked them in pits dug in the ground until the bulbs crumbled into a white starchy powder which was their flour. It was the encroachment of the whites upon the "camas grounds" of the Indians which led to the Nez Perce war. It was during this war that the remarkable retreat of Chief Joseph and his followers took place. Encumbered with women, children and baggage, the Indians crossed the Bitter Roots into Montana, then made their way to the National park and turning northward were within a day's march of the Canadian line where they were captured by Gen. Miles. It was only another chapter in the pathetic story of that race which since the coming of the white man has been fighting a losing fight for the land of its forefathers. Many of the captives never saw their native haunts again. They were sent far away to pine away their lives in the fever-stricken hated "hot lands" of the Indian Territory, while they longed for the cold springs and green prairies of their beloved "camas grounds."—*American Botanist*.

#### The Modern Sweet Pea.

The blooming season of sweet peas has been on for a month in California, and by June 1 the novelty trials at the seed farms were ready for a visit. Before beginning to send notes direct from the 1910 trial grounds, I will make this letter from English gleanings that have accumulated since the 1909 season closed. Fully 700 names are now on the sweet pea list. In October's *Gardener* the forecast of novelties for 1910 was made up, and this was largely added to in the special sweet pea number of January 27. It included the respective lists of such introducers as Baker, Wolverhampton; R. H. Bath, Ltd., Wisbach; C. W. Breadmore, Winchester; Wm. Deal, pee & Co., Philadelphia; Wm. Deal, Kelvedon, Essex; Dobbie & Co., Rothsay, N. B.; Gilbert & Son, Dyke, Bourne; Miss H. Hemus, Upton on Severn, Worcestershire; Isaac House and Son, Westbury on Tryon, Bristol; W. J. Uncom, Histon, Cambridge; Watkins and Simpson, Covent Garden, London; Robt. Sydenham, Ltd., Bir-

mingham; G. Stark and Son, Great Ryburgh, Norfolk; E. W. King and Co., Coggeshall, and W. Atlee Burpee, Philadelphia.

There are 29 novelties offered in this list and we can count 30 other specialists not included. Most of these novelties are of the Spencer form, old colors appearing a good deal in improved form or quality. As showing what the nomenclature has grown to, Walter P. Wright's book shows a list of 31 white varieties; 90 varieties of pink, 20 maroon sorts; 43 rose and carmine rose; 24 carmine and scarlet, and so on. And by the way, Walter P. Wright's "Book About Sweet Peas," of 168 pages, is the worthiest production in the literature of this flower. Like his weekly sweet pea notes in the *Gardener*, it is winsome and "heart to heart." One feels like exclaiming, "Has this modest flower come to this!" And yet I predict it will soon be but one of several books that will perpetuate the interest in the sweet pea, and establish its rank. Mr. Wright does not put information into cold type, he puts all the ardor and devotion of his soul into it. The English sweet pea specialists are like lovers pressing their suit. The book is full of the language of it.

But our English friends, every little while, get what is equivalent to a book on sweet peas in the *Gardener*. And these symposiums are made up of the experience and observation of the most practical growers. And such a picture gallery, too! Every enthusiast must needs send a photograph of his results. I am especially impressed with the skillful use of manure, both barnyard and chemical, by these men. I know from experience the danger of over-fertilizing. How to guide rich feeding into strong haulms and not have them branch before they throw their primary blooms. As surely as they turn their excess of feeding into early branches the first buds will blast, and the second and third series of blossoms will show inferior size and quality. I have learned that it is a real science to fertilize such a plant and hold the strength right to its business of get-

ting perfect flowers from the start. The Spencer varieties especially want a skillful hand in this respect. To see giant Spencer blossoms being picked from a step-ladder 12 feet in the air means that the grower has manured liberally. They take pride in this in England.

But even there I notice that a very frequent inquiry in the *Gardener* is, "Why does this and that variety lose its character and come streaked?" My answer would be—unskillful fertilizing that diverts the strength at the blooming period from flower to foliage. Now that our sweet pea season has opened in California I want to speak of the pleasure I felt last week as I looked into the florist's windows at the Ferry house in San Francisco and at the stands on the street corners to see such well-grown stock. And I was glad to see the Spencer blood among them, especially Countess Spencer. The seed of this was harvested in sufficient quantity to supply a liberal trade, and I am hoping the newer Spencers will improve in seeding quality as this has done.

W. T. HUTCHINS.

#### Burbank's Crimson Eschscholtzia.

The California poppy, as *Eschscholtzia Californica* is popularly known, is one of the finest plants for sowing outdoors to make a good display all summer. The colors are variable and good clear rich yellows are very abundant. The one shown in the accompanying picture was raised in California by Luther Burbank and is described as a clear crimson. Such an one should be a decided acquisition to any garden. It was sent out four years ago.

COLUMBUS, O.—The trustees of the Ohio state school for the blind have accepted the bid of John C. Moninger Co., of Chicago, for the construction of a new greenhouse at that institution.

SEATTLE, WASH.—Much interest was taken by this city in the rose festival held in Portland, Ore., June 6 to 11. Many from this place visited Portland and the event was extensively advertised by the local stores.

BURBANK'S NEW CRIMSON ESCHSCHOLTZIA IN BLOOM IN THE FIELD.

A WELL SHELTERED BULB PLANTATION AT OLLIOULES, FRANCE.

### The Land of the Narcissus and Hyacinth.

Ollioules in southern France, between Marseilles and Toulon, above all other points on the Mediterranean littoral, or indeed anywhere else in the world, is incontestably the head center for the culture of the narcissus in the open air. Many of what are commonly supposed to be Dutch bulbs are cradled here in this warm little corner of sunny Provence, sheltered by the alpine foothills and not near the dykes of the low countries. That Ollioules can reproduce so much more abundantly and luxuriantly than elsewhere many varieties of narcissus and hyacinth bulbs is true to such an extent that many of the shippers of Cannes and Nice, as well as growers in Holland, Belgium and Germany, buy this Ollioules product at increased prices over what inferior stock can be produced for at home. This applies to the cut flower traffic as well as to the bulb growing industry.

The bulb industry of Ollioules first took definite form a quarter of a century or more ago. Slowly at first the product came to be known to the outside world, but a decade later the return from the industry was figured in millions of francs—something like \$400,000, to give it a definite form. At Le Pradet, just east of Toulon, on what is practically a "secondary" soil, a well shaded plantation, that of M. le Marchand, one of the most distinguished cultivators of these parts, the two industries of bulb growing and the selling of cut flowers go hand

in hand. The narcissus, because of its rusticity, can be made a success on soil so constituted and situated that conditions would be entirely unsuitable for the hyacinth, which to reproduce, or to give forth its most opulent blooms, requires the best of conditions. The cut narcissus industry and the bulb growing industry are most often distinct. Where the plantation is laid down with the expectation of profit accruing from the sale of the flowers, the sale of bulbs is not taken into consideration. In this case the bulbs are left in the ground several years running. Hereabouts the first year one counts an average of three flowers of a marketable luxuriance to each two bulbs planted, say 375 dozen from 3,000 bulbs planted to each "are" an area of 100 red square metres (approximately 120 square yards). Their value is perhaps 60 francs. The second year a slight increase will take place and the third year, with an average of four flowers to each bulb, the returns may be as much as 150 francs, and in the fifth and sixth years, with an average of six blooms, 50 per cent more, 225 francs.

These results from a plot containing little more than 1,000 square feet gives a gross return of 735 francs per are or 73,500 francs per hectare, which roughly reduced to American equivalents gives a gross return of about \$6,000 per acre (for a period of from five to six years)—at French prices, be it understood, something like 10 to 15 centimes a dozen blos-

soms, two to three cents, from 16 to 20 cents per 100. At the same moment a competitive variety may be selling in New York or Chicago at from \$2-\$3 per 100.

Bulbs planted for blooms, at the end of five years, may be found to have reproduced at least three to each parent bulb, thus returning a working capital of 12,000 bulbs to the are, worth perhaps 10 francs per 1,000, an additional return of 12,000 francs a hectare, \$960 an acre, this item being practically considered a net return. In general the above is thought to be a very satisfactory operation in the department of the Var in the vicinity of Toulon, but there may be instances, especially at Ollioules, where this figure is frequently exceeded. Again, in the Alpes-Maritimes, farther east, about Nice, it may seldom be equaled.

Nowhere may one see such prolific and abundant bulb cultures of narcissi and hyacinths as around Ollioules, towards the coast and up through the famous Gorges, once the haunt of brigands, but now a tourist sight for those hurried travelers, Riviera bound, who have the time and the inclination to linger by the way and who do not acquire their knowledge of France from the guide books and their experiences on this wonderful Mediterranean coast from the race tracks, golf grounds and gaming tables of the Cote d'Azur. On either side one sees blue or yellow rows of blooms stretching away to infinity, hyacinths of the most gorgeous splendor push-

ing forth between two stunted rows of grape vines—which, to make the exchange a fair one, are generally the product of American roots. Hyacinths, narcissi and jonquils jump at your eyes, as the "bons Provencaux" say, whichever way you turn your head hereabouts from December to March. A few square yards of cleared ground, a terraced hillside or a plot of red soil in the midst of a vineyard suffices in many cases the small

which are found on all plantations; indeed, it is a *sine qua non* for the success of any sort of culture in the Midi of France. The narcissus begins to flower here in the open air by the end of December or the beginning of January, and unless they are grown for their blooms alone no special effort is made to force the vegetation, though a part of the blossoms may be picked at a propitious moment, within two or three weeks after

ductions of the costs of gathering and shipping were made, would go a long way towards cutting the cost of the bulbs originally planted. This is a phase, however, that may not be counted upon definitely. Three thousand bulbs planted to the are (300,000 to the hectare, 120,000 to the acre) will give in return bulbs of a marketable dimension (13 centimeters and over) 1,800 to the are, 180,000 to the hectare, 72,000 to the acre.

By comparison French and American figures are as follows: The price per 1,000 being taken commonly at 20 francs, the gross return per are is 36 francs (\$7.20); per hectare (10,000 square meters), 3,600 francs (\$720), and per acre approximately \$288. To these figures must be added the value of the flowers actually sold as flowers, if any, and the value of 120,000 small bulbs suitable for replanting as "reproducteurs," at a value of 10 francs per 1,000, another 1,200 francs per hectare, \$96 per acre. The total gross return is thus brought up to something like \$400 an acre. As to the cost of cultivation, this, though unquestionably a fixed charge, may vary greatly, according to a dry or wet season, the capabilities of the individual grower, and whether he and his family work in the fields (for there are many peasant growers hereabouts), or whether he hires his labor. Certainly this charge is smaller here in southern France than it could possibly be in any part of the United States. Commonly it is figured roundly at 20 francs per are, 2,000 francs a hectare, \$160 an acre. To sum up then: The net return from a hectare of narcissus bulbs, planted as "reproducteurs" in the south of France, is 4,800 francs, minus 2,000 francs of expenses of cultivation, equaling 2,800 francs, which, reduced to American standards, shows a net return of \$224 per acre.

The following figures touching upon the cost of cultivation should prove interesting, though it is obviously true that any estimate of comparative val-

peasant grower. Land is valuable here, such productive soil as this, so well sheltered from the winds of winter and so well warmed by the southern sun. The sloping hillsides are often terraced off in a most remarkable fashion, like a great stairway spread with a marvelously varied "tapis d'orient," to which indeed a bulb plantation in flower may well be likened.

The foundation of the bulb culture of Ollioules rests primarily on the narcissus and the White Roman hyacinth. Half a million planted bulbs are not unusual with many of the individual growers of the region, and again a crop may often not exceed 2-5,000 bulbs. These are seldom sold by the small dealer direct, at least not to foreign buyers, but to the middleman or shipper. A cryptogamic malady has made its appearance here before now and, striking at the root of things, has reduced many a prospective bulb crop of Ollioules to practically nil, but unless the worm, or rot, or drought has got in its deadly work a crop of 150,000 sound bulbs (not counting the smaller ones remaining for replanting) may give a return of 10,000 francs or more from a plot of five acres. Only the largest and finest bulbs are sent out by the most responsible "negociants," those of from 13-15 centimetres and over in circumference.

The narcissus bulbs are planted in the department of the Var late in August or early in September, just before the period of the autumn rains which, if they don't come, make necessary artificial irrigation, the means for

the blooms have first made their appearance, if ruling prices in the Paris or London markets warrant. This is but a side issue, the chief expectation of profit coming from the sale of the bulbs themselves. At the same time according to market conditions a very satisfactory turnover is often made by shipping the flowers (48 bouquets of a dozen blossoms each) if the price of three to five francs can be obtained. The gross return in this case might be anywhere between \$250 and \$500 per acre, which, after the de-

HYACINTHS AND GRAPE VINES AT OLLIOULES, FRANCE.

A BULB GARDEN AT OLLIOULES, FRANCE.

SCENE IN THE FRENCH BULB GROWING DISTRICT.

The Entrance to the Gorges d'Ollioules.

ues affecting France and the United States should take into consideration various conditions which, so far as cultivating costs go, must inevitably be greater with respect to the latter. With the figures before given, the cost of the original planted stock must of course be taken into consideration.

Before planting the soil is turned over to a depth of 18 inches or more before the beginning of winter. The expense of preparing the ground (labor, fertilizer, etc.) being figured at seven francs fifty centimes an are (100 square meters), 750 francs a hectare, \$60 an acre. The actual planting of 300,000 bulbs to the hectare is a matter of 12-15 days' labor 20,000 to 25,000 a day for six men at three francs a day and six women at a franc and a half a day, a total of something between 350-400 francs, which, reduced to acres and dollars, gives approximately \$30 an acre as the cost of planting—at prices for labor obtaining in southern France, it must be recalled. There is, of course, another deadwood expense to be considered, the wear and tear of tools and material, but this is a minimum outlay; and there is the cost of irrigating, if this be necessary, as it is hereabouts. Of 6,000 acres laid down to the floral cultures of the department of the Var in southern France by far the largest area is devoted to bulbs, a comparatively re-

stricted area to perfume flowers (which are distilled for perfumes), and a still smaller extent in immortelles or everlastings.

The narcissus is, of all the flowers cultivated on the French shores of the Mediterranean, the least pretentious in appearance and, in a certain sense, the least appreciated. Nevertheless its culture, both as to bulbs and flowers, tends to augment each year. Among the varieties of the narcissus mostly cultivated are *N. Vrais* and *N. Tazette*, producing a palish yellow bloom of much beauty. They are often grown sheltered by a grove of olive or almond trees or on some well protected terraced hillside overlooking the sea, the open areas, with a stronger sun, perhaps, and a richer soil, being usually reserved for hyacinths. The pseudo narcissus is chiefly represented by the *Trompettes*, which have their central "couronne" much elongated and enlarged, their blooms being invariably the most sought after for effective display, above all in the largest varieties *Trumpet Major*, and in the slightly differing varieties *Grand Monarch*, each oftentimes obtaining the dimensions of the dahlia. *Trumpet Major* at its best is found in the neighborhood of Toulon; in the *Alpes-Maritimes* it is only found to any notable extent on Cap d'Antibes. The "*Trompettes*" are more precocious than any other variety of narcissus, coming

earlier to maturity and lasting much later in the season.

Two other varieties of bulbs are known around Toulon, frequently classed as narcissi, but are still less true narcissi than the "*Trompettes*." They are not seemingly cultivated to any great extent elsewhere and are called "*Campanelle*" and "*Odorante*," names which explain themselves sufficiently not to require further description. For the narcissus and hyacinth alike two methods of planting are common in the region. By the first method the bulbs are planted in "billons" (raised rows, or ridges) approximately two feet apart, each ridge taking two bulbs six or eight inches apart for its entire length. The other method, the more common and simple, is to plant them in straight single rows at a distance from each other in this case of 12-15 inches. By the above reckoning the number of bulbs planted in a given area may vary, but in general, assuming the "reproducteurs" to be but of 11 centimeters in circumference, one arrives readily at the average number of 3,000 to the are, 300,000 to the hectare, 180,000 to the acre.

When the narcissus bulb crop is taken from the ground it commonly has a value to the grower of from 18-20 francs per 1,000, those of and above 13 centimeters in circumference, with somewhat of an augmentation for extraordinarily large sizes,

particularly if there be a shortage of large dimensions, as there has been the last two seasons.

The sizes and prices are determined by a laborious method of sorting by passing the bulbs singly through tin, or zinc gauges, plaques with circular holes of the various dimensions cut therein. This process is universal; not even with the largest shippers, those who ship in millions, have any automatic substitutes been adopted for the hand gauges in use. The method, while reasonably correct in operation, has only to be supplanted by some system of a revolving cylinder like a potato sorter to save a considerable expense of handling. American manufacturers of enterprise should look to this, though they might have hard work at first supplanting the labor of the old women and young girls of Ollioules who live by this work.

It is evident that the question of organization, and the elimination of tedious and expensive hand labor, so far as possible, will do much to reduce the prime cost of cultivation even in France. That there is little or no development along these improved lines is shown by the fact that the prices of the finer varieties are ever soaring upward as the sparks. Here, as in bulb growing Holland, the manual labor is figured at a low cost (often 30-60 cents a day as against \$1-\$1.25 in the United States), but even so it enters largely into the total cost of production—40 per cent of the gross return per hectare. The average return of the narcissus bulbs to the grower here, in 1909, was on the basis of 20 francs per 1,000, whilst the selling prices to dealers were slightly over 20 francs per 1,000 for bulbs of 13 centimeters in circumference, 27 francs for extra sizes, 28.25 francs for those classed as Trumpet Major, and about the same for Grand Monarch.

The business of selling the south of France bulb crop is usually quite distinct from that of growing it. The shipper, exporter, "negociant," or middleman, jobber, whatever you choose to call him, is seemingly a necessity. He collects his supplies from the small neighboring growers, who have not the knowledge, or the ability in most cases, to develop a foreign connection nor to handle the situation financially in the event of their finding a direct outlet. Often the grower is but a mere peasant who does things chiefly by rule of thumb and trusts to the powers above to aid him to earn his livelihood. If his crop is a good one he is happy, though he complains bitterly of the low prices given by the shippers and of the system of selling in "long thousands" (1,050 for 1,000) which the middleman demands, also the system of calibrage, for often his tiny crop, 5-10,000 bulbs, or even less, is sold at 13 centimeters, when 10 per cent will often measure up 15 centimeters and a few hundred perhaps in the "extra" class. This works somewhat to the benefit of the middleman, perhaps, but he demands it as his right to cover him for certain unforeseen con-

tingencies. He acquired the procedure by usage or custom, and he clings to it tenaciously in an effort to keep up with tradition. The grower complains, finally gives his assent and continues in spite of all to do business on this basis.

The narcissus can be made, if occasion demands, to produce its blooms freely, as well out of season as in. The Pacific coast stands the best chance of being able to develop open air bulb growing on a large commercial scale in the United States, but it is not yet a rival of Ollioules in the Var, neighboring upon Toulon in southern France. Will it ever become such? That is what nobody knows. The French grower does not admit that it will. The United States Bureau of Plant Industry says: "Wait and see."

Bulb Gauges Used for Sorting at Ollioules, France.

As Bermuda is at the present time the main source of supply for Easter lily bulbs, so is this prolific horticultural forcing ground on the shores of the Mediterranean the hotbed from which flower lovers in general and bulb dealers in particular draw their chief and best supplies of White Roman hyacinths, Narcissus Grandiflora, Trumpet, Trumpet Major and Grand Monarch. If the ability of the Puget Sound region to produce the high grade narcissus and hyacinth is demonstrated as economically practical it should prove of great value to the eastern trade which has such a great difficulty, and is under such great expense, to produce the finer varieties of bulbs and blooms. The question of the development of the industry by intensive cultivation has no more interesting or encouraging phase than that of bulb growing. Potential possibilities are to be remarked more noticeably than ever before; it is now simply a question of the demonstration of the practical and profitable cultivation of bulbs at home rather than by following that easy line of resistance and buying a "ready made" crop abroad.

M.

FOND DU LAC, WIS.—Bush & Broome will commence at once on the building of four new greenhouses, each 16x100 feet, on Oak avenue.

## THE ROSE.

### Planting Grafted Roses.

ED. AMERICAN FLORIST:

Will you please tell me how to plant grafted roses? Must I sink them under the graft or over? Some tell me to put them two inches under the graft, others tell me not to cover it up.

A SUBSCRIBER.

Cover the point of union in every case to enable the plants to root from the scion. This will be more satisfactory in every way than leaving the union of stock and scion exposed.

G.

### Roses in the South.

The question of carrying roses over a second year is again to the front and many points are made on both sides of it. To my mind the only roses worth trying the second year are Beauties and the hybrid teas. I have never yet seen in the south a two-year-old house of pure teas that in any way approached in results a house of thrifty young plants. Very little drying off is required for the teas. After a slight rest of about two weeks the thin wood can be cut out and the strong shoots shortened a little. Scrape off an inch of the top soil if on benches and two inches if on solid beds, then after a liberal sprinkling of bone meal, replace with a compost of half soil and half manure. A thorough watering can be given after which go slow until the plants show signs of new root action. The operation of lifting the plants and replanting in entirely new quarters is rather a delicate one with often very doubtful results. The Beauties and hybrid teas should have a longer resting period and be more severely pruned before starting up again. Beauties especially we find give better results if cut back to eight or nine inches than when left longer. In the latter case the growths seem to be slender and lack the stiffness and robustness of those from the plants cut well back.

The same treatment can be followed as in the case of the teas, only the hybrid class can be lifted and replanted in new quarters if desired almost with impunity. Frequent spraying and damping down the house is necessary until the plants have made a good start after which normal treatment can gradually be resorted to. It is pleasing to record the satisfactory results that the Pink and White Cochetts and W. R. Smith give as summer bloomers. The full and lasting blooms borne on long canes with bristling foliage are in marked contrast to the washed out half-sized blooms of Bride and Bridesmaid at this season. With a never satisfied demand for good roses during summer it is a wonder growers do not give more room to these varieties. The Cochetts should be allowed to develop to the selling stage before cutting. There is not the least danger of their expanding too far or falling to pieces, but if cut too soon they won't swell out and are very liable to wilt in a short time.

WM. LEAR.

### Planting Young Stock.

Everything should now be in readiness for the planting of the young rose stock. Having suggested the proper preparation of the soil and rose houses to receive the young plants in previous installments, from the writer's point of view, we will take up the question of planting. Grafted plants will require slightly different handling than own root plants from

brought in to pack down to required depth for the grafted or own root plants as mentioned above. If the soil is extremely light it can be packed by treading it down; heavy soil can be firmed sufficiently by hand.

When everything is in readiness for planting the beds can be marked off, using an old sash bar a little larger than the width of the beds. Drive 20-penny wire nails through the bar

20 inches. Four rows of Beauties to a 4-foot 6-inch table; the other varieties, four rows to 4-foot table. We have found this amount of space for the varieties mentioned about right.

Water the pot plants thoroughly before knocking them out and do not attempt to remove the drainage, as it will not do half the harm as to disturb the roots by removing it. Lay the plants out only about as fast as they can be planted, so the roots will not become injured by the bright sun if planting is done on a bright day. Open up the soil with trowels and press it firmly around the balls of the plants. Then level the soil around them. Do not put in too much time firming the soil with the hands as it should be firmed with a tamping stick and a saucer shaped depression left around each plant when finishing up before watering. A good tamping stick can be made from a 2x3 scantling a foot or so in length, with a handle shaped at one end. Do not strike too near the plants when tamping so as to crush the ball.

Plant all grafted stocks so the union will be covered by the soil at least half an inch when the beds have been leveled later on. Water thoroughly in the saucers left for this purpose and only wet the surface of the surrounding soil, as it can be kept fresh for several weeks before pulling it in and around the plants. Stake and tie all grafts as soon as planted and when planting same look out for bad unions; they must be united perfectly or they will die off all through the season. Give the houses a good cleaning up and ventilate rather sparingly for a few days, avoiding draughts.

ROCHESTER, N. Y.—The Florists' Association will hold its second annual show in Convention hall, Nov. 1 to 5. Owing to the success of last year's show it is expected that all the space in the hall will have to be used to accommodate the expected increase of exhibits.

AT THE INTERNATIONAL FLOWER SHOW, PARIS, FRANCE.

Vilmorin, Andrieux & Co.'s Exhibit of Vegetables.

start to finish, requiring in the first place at least five inches of firmly packed soil on the raised benches, or in the solid beds, whereas (excepting American Beauty) own root plants will do better in four to four and one-half inches of soil, this being regulated according to the strength of the plants.

If the soil has been properly prepared it will be finely broken up and should be just moist enough to pack firmly—if too wet it would form a solid mass under pressure, a very undesirable condition. One cannot always have the soil just right in this respect, but if it should be on the wet side have it wheeled in and left to dry out before leveling and packing. On the other hand, if it should be in planting condition, get together as much help as can be managed systematically to do the filling, leveling, etc., as the planting should be finished up as rapidly as possible. Have a man on each side of the tables or beds to level off or to break up any of the coarser material in the soil; this is most important, as when the barrows are dumped the manure has a tendency to run towards the edges, and if the soil should require fining or further pulverizing this is the time to do it. If solid borders are to be filled the drainage should be free, chip stones being preferable to any other drainage, although we have seen clinkers used with good results (not ashes). The drainage should come within five inches of the top of beds for own root, and six inches for grafted plants. Wheat straw scattered over the benches will prevent the soil silting through. For the benches the wood sides should be five inches and six inches respectively, inside measurement, and enough soil should be

the proper distances apart the rows are wanted and a nail to keep the bar in position at the side, then with a man on each side of a bed the four or more rows can be laid off at one time. The distance between the plants in the rows may vary some, according to the habit of the plants, although the following measurements will be found approximately correct. Killarney and White Killarney, 15 inches apart in the rows; Richmond, 16 inches; grafted Bride, Bridesmaid and My Maryland, 18 inches; own roots of the latter varieties, 15 inches; Beauties, from 18 to

## N. N. Sherwood.

N. N. Sherwood, president of the National Sweet Pea Society of England, whose portrait we give herewith, is head of the firm of Hurst & Son, the well-known English seedsmen. The following sketch of his life is taken almost verbatim from the Gardeners' Magazine as is the portrait: "Entering the firm as quite a young man, Mr. Sherwood applied himself so diligently to business that he rose rapidly from the ranks, eventually becoming manager, partner and proprietor. Mr. Sherwood has never shirked the responsibilities of life, and this, joined to his business ability, unflinching good humor and broad charity, has placed him in an unique position in the world of horticulture. He was one of the first 60 horticulturists to receive the Victoria Medal of Honor in Horticulture; he has been Master of the Worshipful Company of Gardeners; he has provided horticultural scholarships; he was treasurer of the Royal Gardeners' Orphan Fund until quite recently, and has been succeeded in that office by his son, Edward Sherwood; he has been president of the Nursery and Seed Trades' Association, and until this year, has been treasurer of the National Sweet Pea Society since its foundation, but was recently unanimously elected to the presidency of that body. He is also a trustee of the Gardeners' Royal Benevolent Institution.

Though eminently successful in business, Mr. Sherwood has not forgotten the claims of charity, but the account above does not show that, besides devoting much time to the work of the gardening charities and other good works, he has also given liberally to all of them, and set a splendid example of loving one's neighbor as one's self. His gifts have been princely, and always inspired by a deep sympathy for the needy and helpless. It was Mr. Sherwood who founded the convalescent fund in connection with the United Horticultural Benefit and Provident Society. Mr. Sherwood has enriched our gardens by the introduction, through his firm, of many fine novelties in flowers and vegetables. Fidelity and purity of seed stocks he has always put at a very high standard, and a visit to the trial grounds at Kelvedon and Fering show what great pains and care are taken to maintain that standard."

## Sweet Peas for Christmas.

ED. AMERICAN FLORIST:—

Please suggest four or five varieties of sweet peas to be sown in mixture and when to sow them to be in bloom by Christmas. E. J.

Sow two ounces of seed to 100 feet of row, and thin out as much as necessary when the plants are about six inches high. If sweet peas are wanted for Christmas, sow the seed in well-ventilated houses, not before August 15, nor after August 25. This sowing will bloom from November 1 until April. For the main crop in January or February, sow about September 15. If the best sweet pea flowers are wanted for Easter (April 16 in 1911), sow the first part of November. Christmas Pink, Florence Denzer, Mrs. Alex. Wallace and Christmas Meteor are the best varieties for flowering in winter. Z.

## THE RETAIL TRADE

## Flowers at King Edward's Funeral.

All about the exterior of the chapel were placed magnificent floral tributes from all parts of the kingdom, and the scene on both the north and south sides of the chapel was one of unsurpassed loveliness. Distinguished personages on their way to the chapel paused to look at these magnificent flowers. King Edward VII. was being laid to rest in a bower of flowers, the scent of which filled the air, and the inscriptions on which filled the heart with emotion.

St. George's chapel was literally embowered in flowers. Magnificent wreaths of all sizes and descriptions encircled the ancient building. They continued to arrive until just before

N. N. Sherwood.

President of the National Sweet Pea Society of England.

the funeral service. In the early hours ticket-holders were permitted to view them, and the inscriptions on many of the tributes from the very poorest of the king's subjects were very touching. Lying on the lawn near the south door of the chapel was a simple little cross composed of buttercups, daisies, and blue bells, and the inscription attached read, "A Blind Man's Tribute to His Beloved King." There were wreaths from poor people of the east end, the factory workers of the north, and from almost every class of workers in England.

The Dean's cloisters were almost entirely filled with tokens, the lawns on the south side of the chapel were covered, and from a distance it looked as if there had been a snowstorm the mass of white flowers being enormous. A noticeable wreath here was that of the Eton boys, tied with the familiar light blue ribbons. It is estimated that there were between 5,000 and 6,000 wreaths and that they had cost over £100,000. Some of these tokens of loyal affection were of great size and beauty. They were shaped as wreaths, anchors,

crowns, harps, and horseshoes. To a wreath sent by Lady Swansea are attached these lines:

His race well run,  
His work well done,  
His crown well won,  
Now comes rest.

The Emperor of China sent a very striking tribute of roses, lilies, and laurel leaves, bearing the inscription, in both English and Chinese, "With sincere condolences from his Imperial Majesty the Emperor of China." One wreath was inscribed, "We are bereaved, for the King belonged to us all." Another read, "In loving memory of our dead king, from the poor women and children of Clare Market, Drury lane."

The wreaths from the many regiments of the British army were remarkably fine. The Legion of Frontiersmen sent a beautiful trophy in which figure the Union Jack, the motto "God guard thee," the arms of England, Scotland, Ireland, and Wales, and the four points of the compass.

Just before 11 o'clock troops began to form up in the lower ward. The sun shone out brilliantly, but there was a lovely breeze, and under the shade of the old grey towers the conditions for onlookers were ideal. A sailors' guard of honor marched up to the lower ward and, with a number of Royal marines, lined up near the Horseshoe cloisters. The castle guard also turned out and took up a position just inside the Henry VIII. gateway. At 12 o'clock a fine guard of honor of the Second battalion Scots guards marched to the foot of the steps leading up to the west door of St. George's chapel.—London Daily Mail.

## The New Sweet Pea Corsage Bouquet.

This new style of corsage bouquet is worn on the upper arm, where the long glove finishes, with a ribbon attachment. The corsage is made somewhat flat and molded to fit the upper left arm. This idea was practically demonstrated at a fashionable school closing recently and was wonderfully effective and novel. The "flower march" was led by a sweet girl graduate who had an artistically arranged shoulder corsage made of the new Butterfly sweet pea. It was fastened with tiny pink ribbons, from which showers of the sweet pea fell in tiny clusters. It takes away from the set and trying old style especially at functions where it is not convenient to carry or use the old styles.

This idea can be handsomely carried out for wedding functions. It is pretty with or without the shower attachments. It bids fair to become very popular for balls and dances as well, for it is both practical and artistic, but must be made daintily. The sweet pea foliage is used for a foundation. For the tiny flower girl at the wedding a pretty conception is the flat satin or silk bag carried over the arm with long streamers and covered with a small flower like the forget-me-not, sweet pea, cornflower, etc. Little bunches of the flowers are sewed on the streamers and a loose bunch is tied with a knot and two ends of the ribbon at the foot of the bag.

A. E. KLUNDER.

### Portland's Rose Festival.

Portland, Ore., "the City of Roses," celebrated the greatest and best rose festival ever held in that city (some say in any city) June 6 to 11. Visitors from the whole Pacific northwest poured into the city days before the opening, and the hotels and boarding houses were taxed to the limit. The weather was good throughout the week, the crowds orderly, and as the whole affair was on the generous lines characteristic of the west, it could not have been anything but a pronounced success. Everything was done with true "get-there" western spirit. The feature of the affair was the parade. It consisted of 16 elaborate floats representing "Rex Orgonus," "Miss Portland" and other allegorical figures, and as it was held at night it surpassed in the brilliancy of illumination most so-called electrical shows.

The basket of flowers, the last float in this procession of electrical display, told the story of Portland and the annual festival that has made the city famous. It consisted of an immense woven basket, filled with flowers, from which human rosebuds nodded greetings to the crowd. In front and at the feet of a brilliantly-plumed Chinese pheasant, were four human rosebuds beneath a spray of bluebells, each bowing to the throng of spectators. The basket was surrounded by illuminated roses.

Everything was decorated with a rose motif. Roses, roses everywhere, and from the orderly crowds one is tempted to paraphrase and add, "and not a drop to drink." They were piled in heaps at the depot to welcome the incoming visitors and, until one left the town, everywhere the eye rested there were roses.

Most of the stock used was outdoor grown, yet everyone in the trade reports a landoffice business for the week, as other flowers, especially greens, were called into service, while as a stimulant to rose-culture the festival was of great value to the nurserymen. Everyone, visitor and resident alike, went home vowing to plant some rose bushes or some more rose bushes, as the case might be.

### Dahlia Notes.

For 20 years I have been preaching the same sermon: "If you want the finest blooms in the greatest quantity at the most profitable time, September 15 to October 15, don't plant too early." In earlier years it was blooms for exhibitions, but now, thanks to those exhibitions, it is an established trade in commercial cut blooms. Dahlias fill in nicely that little space between asters and chrysanthemums, and the difference between profit and loss lies in how nearly the whole crop can be had at just the proper time. One of the largest growers boldly advises their customers to plant early; yet they will not plant until June 1 and will finish in July. Thousands have written me of their failures to get blooms and it is usually the same story, of immense plants, abundance of foliage and blighted buds or one-sided flowers. However, after the copious September

rains, new shoots start and the frost nips a promising but belated crop in the bud.

Planted later, they make a harder, sturdier growth and with less foliage use up the moisture available more slowly, bursting into bloom about September 1, with the bulk of the crop at the proper time. Late planting can be carried too far, but June plants always give us the best results. Where dahlias have been planted early, keep the soil loose and absolutely clean.

L. K. PEACOCK.

### Peonies at Vaughan's, Western Springs.

Although the peonies at Vaughan's Nurseries, Western Springs, Ill., were badly hit by the frost there is still a fine display and about 100 dozen per day of fine blooms are being cut. After such an unusual season as the present it is interesting to note the varieties that were damaged the worst and vice versa. The old standby, Festiva Maxima, was hurt perhaps worse than any other and there are few flowers of any consequence being cut. The growth in some cases is also badly damaged and altogether the plants are not doing their duty this time. Jeanne d'Arc is, however, partly making up for the loss of Festiva Maxima. It is a beautiful flower with more color in it than the latter and the shape of the flowers is excellent. Though described as a pale lilac rose the flowers sell in the market as white in the absence of purer white forms and its delicate fragrance is in its favor.

Modeste Guerin is another that is showing up well despite the bad season. This is a typical bomb shaped flower of a pleasing shade of red. A peculiarity we noted about this variety was the freedom with which it flowered on quite small, young plants. Divisions planted out last season have almost every shoot crowned with a very fair flower and if it will do this in a bad season it ought to be something phenomenal in a good one. This also is sweetly scented. Mme. de Verneville is surely one of the finest peonies we have and must be hardy to have come through the season as it has here. The flowers are pure white with a few carmine tips to the petals that relieve the white and give it a most attractive appearance. It is early and excellent in every way. Mme. Breon is another early white with guard petals of shell pink, an attractive combination. This, the true form, should not be confounded with the deep pink variety sometimes sent out under this name. It is of medium size, fine shape and a good vigorous grower.

Among the later varieties that look promising we noted Rubra Superba, which, while not quite up to its usual form, is still good, judging by its present appearance. While one would naturally suppose that the earlier varieties would have suffered worse than the later, the opposite appears to have been the case. As to the condition of the plants this leaves nothing to be desired and owing to the constant attention given by Carl Cropp and his assistants to the selection and roguing the lines of flowering plants are now very true. Mr. Cropp says there will

be more difficulty than usual this year in trueing up the younger rows but he is keeping up the work along this line at every opportunity. The nursery stock here looks well and we noted fine blocks of Koster's blue spruce in good shape. The hybrid sweet briars are in flower now and there are good collections of irises and other herbaceous plants well worth a visit.

### Twenty Years Ago.

JUNE, 1910.

The fifteenth annual convention of the Nurserymen's Association was held in New York.

Severe hailstorms were reported from all parts of the country.

The eighth annual convention of the American Seed Trade Association was held in Saratoga Springs, N. Y.

James D. Reynolds was nominated for horticultural commissioner of the World's Fair by the Chicago Florists' Club.

Work was started on 14 new greenhouses in Lincoln park, Chicago.

Trimming ladies' bonnets with natural flowers was the latest conceit in New York.

Patrick Barry of Ellwanger & Barry died at his home in Rochester, N. Y.

The death of B. S. Williams, famous English nurseryman, author and founder of the Orchid Album, was announced in the AMERICAN FLORIST.

## OBITUARY.

### Dr. Levi Lamborn.

Dr. Levi Lamborn, of Alliance, O., died at his home there, June 14, at the age of 83. He was born in Chester county, Pennsylvania, in 1827, but had resided in Alliance over 50 years. At one time he was a prominent banker and laid out the first allotment of land there for real estate speculation. In 1876 he ran against the late President McKinley for congress, lacking 200 votes of winning. As an orator and writer he ranked among the best in this state, and in later years wrote extensively for magazines and newspapers. He became famous as the author of "American Carnation Culture." The late President McKinley's love for the carnation was developed by Dr. Lamborn, who, while campaigning against the late president in the congressional fight, distributed boutonnieres of carnations. Dr. Lamborn and President McKinley were warm personal friends. Dr. Lamborn's wife, who died five years ago, was a niece of General Grant.

LAWRENCE, MASS.—E. W. Blair is building a greenhouse on Lowell street between Warren and Milton streets.

BRYANTVILLE, MASS.—This place was visited by a severe hailstorm June 7 and considerable damage was done to glass.

GREENFIELD, MASS.—F. I. Yettes will move into the store now being remodeled in the Sheldon block on Main street.

MONONGAHELA, PA.—The I. Shelby Crall Co. has given a contract to the Lord & Burham Co., of New York, for the erection of a new semi-iron greenhouse to be built at once. The new house will be 40x100 feet and will take the place of the present wooden structures. It is hoped to have the house up the early part of July.

THE illustrated article on "The Land of the Narcissus and Hyacinth," by a correspondent closely in touch with conditions in the French bulb growing districts, will be found of especial interest.

SPECIAL delivery stamps are easily obtained and it is hardly worth while taking the risk of using 10-cent stamps and trusting the postal authorities to divine the fact that it is for special delivery. If "special delivery" is written under the stamp it is all right but it is easier to use the proper form for the purpose.

THE date of Easter next year is April 16, twenty days later than that of last Easter.

"A. K."—We cannot answer the inquiries of correspondents who do not supply their full names and addresses.

PEONY growers would confer a great favor on us and our readers if they would kindly send a list of the varieties that have flowered most freely during the present unusual season, also of those that suffered worst during the inclement weather this spring.

THE schedule of prizes for the twelfth annual exhibition of the Tarrytown, N. Y., Horticultural Society, to be held at the town hall, Irvington, N. Y., November 1 to 3, 1910, has been issued and can be had on application to Secretary E. W. Neubrand, Tarrytown, N. Y.

THE proceedings of the eighth annual meeting of the Chrysanthemum Society of America, held at American Institute, New York, November 10 to 12, 1909, have been published and mailed. It contains President Smith's address, secretary's and treasurer's report, several important papers, and a list of the American varieties disseminated last year. A list of members is also given.

## Personal.

J. A. Valentine will celebrate his fifty-first birthday June 26.

## American Carnation Society.

### CARNATIONS REGISTERED.

By F. Dörner & Sons Co., Lafayette, Ind.: Gloriosa.—(No. 42, '06). Cross between seedlings under number. A magnificent shade of pure light pink. Growth is a true commercial type, early and continuous flowering, excellent stem and calyx. Has a working habit that produces quantities of blooms without a break. Size, 3¼ inches and over.

White Wonder.—White Perfection X Seedling under number; pure white; size, 3½ inches and over. Has all the White Perfection qualities improved, larger flower, stronger stem, stronger growth. Makes nearly double the sized plant in the same length of time, thereby largely increasing its productiveness. A. F. J. BAUR, Sec'y.

## American Gladiolus Society.

The officers of the American Gladiolus Society are extremely busy these days. The large volume of inquiries and requests for membership application blanks demonstrates the great popularity of the gladiolus and the importance and necessity for such a society. The interest in the movement is not confined to America, for two of the great specialists of Europe are among our charter members, and our first meeting at Boston developed a strong sentiment for an international society. There is much encouragement in the fact that the amateurs have taken hold of this movement so enthusiastically. This was evidenced by the large enrollment of amateurs on the charter list of the Boston meeting. Since sending in the list of prizes

offered last week for the Rochester exhibition, the following have been received:

Stumpp & Walter Co., New York, \$10 in gold for the best 12 shades in any variety.

Weeber & Don, New York, \$10 in gold for best 10 varieties, to include Baron Hulot, Princeps, and Contrast, three spikes each.

E. H. Cushman, Sylvania, O., \$5 in gold for best vase of 25 spikes white, any variety.

A. T. Boddington, New York, \$10 in gold; to be decided.

John Lewis Childs, Floral Park, N. Y., \$10 in gold for best collection of gladioli, Childs varieties, three spikes each, to include Attraction, Blanche, Cardinal, and Wild Rose; \$5 in gold for best vase of America, not less than 12 spikes.

I. S. Hendrickson, Floral Park, N. Y., \$5 in gold for best vase of Contrast, not less than 12 spikes.

J. M. Thorburn & Co., New York, silver cup for best collection of Gladiolus Primulinus, type and hybrids, exhibited by an amateur.

A. L. Miller, Brooklyn, N. Y., \$5 in gold for best display of pink and white varieties; three spikes each of at least six varieties.

F. R. Pierson, Tarrytown, N. Y., \$10 in gold; class to be decided later.

L. MERTON GAGE, Sec'y.

## Society of American Florists.

For information write **Orange County Nursery & Land Co.,** Fullerton, Orange County, Cal.

## Jeffries and Johnson

Are going to fight. So am I. But I'll fight in a different way. They are going to fight with their fists. I am going to let my ability fight for the man who wants to hire me, or for the man who wants me as a partner. Who am I???? I am an All-landscape gardener, with a lifetime experience; know all about trees, shrubs, perennials, pot plants, etc.; know how to sell nursery stock; take large contracts and handle any number of men to advantage; in short I am what you call a landscape gardener, and can show it. Want to change present position. In case of a good proposition I have a little money, too; so, gentlemen—nurserymen or florists, what can you offer me?

Key 143, care American Florist.

### Chicago.

#### SECOND RATE STOCK A GLUT.

Conditions have certainly been peculiar on the market during the past week. While there have been days when stock piled up to an alarming extent in some houses, other houses have cleaned up well and not at sacrifice figures either. There has been a great glut of inferior stock that has been hard to move at any price, and those who had any kind of an offer for second-rate peonies, carnations or roses were inclined to "let her go" without much consideration. A peculiarity about the peonies this year is their liability to drop their petals upon the slightest provocation or without any provocation at all. Everything that has gone wrong with the peonies this year has been laid to the frost. If they have fallen all to pieces before they reached the customer the frost did it by weakening the petals. The frost prevented their opening some time back and is now responsible for

their opening too quickly. Indeed, if it were not for the frost stories one would feel uncomfortably hot these June days, and it is too bad the growers cannot ring in a frost story to account for the mildew on the roses and the sleepy carnations. The frost has done the greenhouse men some good already this year and it is a pity this reservation has to be made.

Probably never has there been a time when the difference between careful culture and slipshod methods have been more apparent. Growers of roses who early noted the signs of mildew and took precautions against it are rewarded now with fine clean stock which, notwithstanding the present glut, is wanted and sells at a good figure. Others, thinking in May that the season was practically over, disregarded the first signs of this pest, with the consequence that their plants are now overrun with it, and the flowers are practically worthless. It is absolutely useless sending such stock to the

market, as it adds to the troubles of the commission man and has only to be dumped eventually. On the other hand, good stock is selling remarkably well for the season, and is likely to be scarcer during the next few weeks. Beauties from the old plants are not as good as they were, but several growers are getting fine cuts from the young stock planted early. The foliage on these is clean and healthy, the stems of fair length and the flowers clean, bright and of good color. Killarney, as may be expected, is not as good as it was a month ago, still there are many good flowers. Richmond is small and flies open quickly; Chatenay is fair, Perle fair, and Kaiserin and Field very good. Uncle John is still well shown and there are some remarkably good Bride and Bridesmaid still to be seen, as well as a lot of poor flowers. Carnations of good quality clean up fairly well, but there are not too many around. Poor stock in abundance litters up the ice boxes and stores and

**GOOD FRESH ROSES**, our selection, in lots of not less than 500, at \$15.00 to \$20.00 per 1000

# Bassett & Washburn

Store and Office: 76 Wabash Ave.,

CHICAGO

Greenhouses: HINSDALE, ILL.

does not move except at ridiculously low prices. A few asters are in the market from indoors, but they are too early and will not recoup the growers as long as carnations are so plentiful. Orchids, valley, and small flowers, generally, are in demand and sell fairly well. Sweet peas from outdoors are now plentiful and meeting with fair demand. Gaillardias, irises and cornflowers are to be seen in quantity, but the demand is not brisk. Greens are easier owing to the arrival of large quantities of common ferns. These are soft as yet and many cases are badly heated on arrival. Smilax and asparagus are more plentiful and of better quality than of late.

### NOTES.

A fire at Mons Olson's property on Sixty-first and May streets destroyed a barn and cottage, and it was at first thought that Mr. Olson's automobile was burnt. This, however, proved a false alarm, as it was quite uninjured but on Sunday Mons and a party of friends took in Lake Forest and collided with another automobile which was carrying too many guns for his, with the result that the car had to be left for repairs at Highland Park. The loss to the property at Sixty-first street was covered by insurance.

Among the fine rose stock at Peter Reinberg's during the past week good American Beauties from young plants have been a specialty. The flowers are clean and good in color, the foliage remarkably fine and altogether they are excellent flowers. Other roses are very good for the season. The past season's business up to last week has been away ahead of that of the previous year and shipping trade is keeping up remarkably well.

The stock at Poehlmann Bros. Co.'s

## ORCHIDS

### A SPECIALTY.

Fancy stock for Weddings and all occasions. Also full line of all Cut Flowers, Florists' Supplies, Greens, Wire Work, Etc. Send for Quotations.

**CHAS. W. McKELLAR**

51 Wabash Avenue,  
CHICAGO.

continues to arrive in prodigious quantities and the quality keeps well up to the mark, fine Killarney and White Killarney roses, carnations, valley and orchids being among the choicest offerings on this market. John Poehlmann says they are cleaning up very well considering the time of year, the demand for weddings and school exercises keeping their customers busy.

Wietor Bros. continue to show fine rose stock, the quality of the Kaiserin, Bride and Mrs. Jardine keeping well up. The young stock in the new houses

is making good progress and plant trade has been very brisk.

The Geo. Wittbold Co. reports an extremely busy month with wedding decorations and other work. Fred Wittbold still feels the result of the accident to his arm, but is doing as well as can be expected.

T. B. West, of Perry, O., has been in town during the week. Mr. West is adding to his labors in peony culture by introducing a new strawberry, Roosevelt, which is said to have many good points.

## FLOWERS FOR JUNE WEDDINGS

### AND SCHOOL COMMENCEMENTS.

To those customers who have been using our flowers right along we need only say that our stock was never in better condition than at present. A word to the wise is sufficient.

To those who are not among our regular customers, we wish to say that there are no better flowers reaching this or any other market than those we are now receiving from our mammoth greenhouse plant.

**Beauties**, long stemmed, medium and short for all purposes. **My Maryland**, **Killarney**, **White Killarney** and **Richmond** roses are especially good and we have extra long stems, 40-inch, fine for graduation bouquets. **Carnations** in all leading varieties. Plenty of fine colored **Enchantress**, **Winsor** and **Lawson**.

Home-grown **Orchids** (Cattleyas) a specialty, **C. Mossiæ** and **C. Gigas** are in full cut and the flowers are especially good. **Greens** of all kinds. **Adiantum** and **Asparagus**.

**POELHMANN BROS. CO.** OFFICE AND SALESROOM:  
33-35-37 RANDOLPH STREET. Chicago,  
LONG DISTANCE PHONE, RANDOLPH 35.

At the J. A. Budlong store good sweet peas from outdoors have been offered all week. The summer roses are in excellent shape and we noted some good, clean white asters.

W. H. Kidwell has purchased a hotel at Eagle lake, 17 miles from Benton Harbor, Mich., and intends to run it this summer. His family will spend the summer there.

Peonies are being handled in immense numbers at J. B. Deamud Co.'s store, also large consignments of new stock common and fancy ferns.

Besides some extra quality roses in variety Zech & Mann are showing fine stocks, sweet peas and extra good *Gladiolus Brenchleyensis*.

J. B. Deamud and Fred Hunt and wife paid a visit to Western Springs on Sunday to look over the peonies at Vaughan's Nurseries.

E. F. Winterson celebrated his forty-second birthday June 21, with full ceremony.

Bassett & Washburn report the shipping trade keeping up remarkably well. White roses have been in especially good demand including Bride and Kaiserin. The former is likely to be shorter here, 30,000 plants having been thrown out. Geo. Heidenrich of the shipping department here is to be married Sunday, June 29, to Miss Elfrida Prillwitz at St. Anne's. Joseph Elreich, shipping clerk here, is to be best man.

Chas. A. Samuelson, 2132 Michigan avenue, on Monday, with two assistants, began decorations for a wedding at Lake Geneva, Wis., which took place on Wednesday. Two thousand peonies and 50 strings of asparagus were used. Mr. Samuelson also stated that he has been very busy with funeral and graduation work during the past month.

H. Natzke, 2336 West Nineteenth street, who some time ago had his left leg amputated at the knee, is more or less troubled with the limb the past few months. Owing to this, the greater part of the work is taken care of by Mrs. Natzke, although Mr. Natzke assists in the greenhouses as much as possible.

The names of J. A. Mendel, 1424 West Twelfth street, tenth ward, and Alderman Peter Reinberg, of the twenty-sixth ward, have appeared in the papers for places on the county ticket. Mr. Reinberg is placed under the county treasurer head, while Mr. Mendel's place is not mentioned.

Emil Jelik, 5037 Ashland avenue, reports business as rushing. He states that he may go back in the wholesale business in some suburban district. His wife has been sick for some time and for this reason he wishes to re-

move some little distance from the city.

A movement is being made on the west side among the retailers to close the stores at 6 p. m. on Wednesdays and Fridays. Six have already done this for some time and seemed well pleased with the results, no difference being noticed in the receipts.

Indianapolis.

June weddings and commencements have saved the month. The Shortridge high school graduating class had the pink rose for its class flower, and last Wednesday Killarney, Bridesmaid and My Maryland were popular indeed. The palms of nearly every retailer have been working overtime on church and home wedding decorations. During the past week Henry Rieman had every one of his palms out, which of itself shows how large the demand has been. The weather man has turned the hot blast on us so that under glass the thermometer went up to 108° on Friday. This hot weather is putting the finishing touches on the sweet peas under glass. Nearly everyone has started planting chrysanthemums. Brandlein, Nelson, Baur & Smith, Roepke-Rieman Co. and Henry Rieman are about through with this job.

Pahud has bought an Indian motorcycle for quick delivery and collecting purposes. The Pahud Floral Co. will build two new houses during the summer 12x75 feet. One of the houses will be used for violets, while the other one will be filled with ferns and Asparagus Sprengerii. This flourishing concern, contrary to the rule which most others have adopted, will increase its chrysanthemums this year and expects to have six houses for this flower alone.

Baur & Smith's white carnation, Shasta, is holding up fine. They have kept a record of the blooms cut from one bench and have found that this variety has outbloomed all the other

varieties. This year Baur & Smith are going into callas a little heavier than ever before, putting in two benches instead of one.

The big chrysanthemum show will come off without a doubt in the fall. A guarantee fund of \$2,000 is being raised without much difficulty. The show committee held a meeting last Tuesday to make final arrangements concerning the premium list.

BUSINESS GOOD.

A terrific burst of hot weather has  
followed heavy storms of rain and  
hail and there is general discomfort.  
Business is very good for the season,  
however, and whether it blows hot  
or cold it does not matter much to  
the busy man. There are quantities  
of flowers, but the quality is retro-  
grading fast, all the local stock par-  
ticularly being affected by the heat.  
A welcome addition to the assort-  
ment was Iris Kaempferi, which  
makes a great showing in the win-  
dows and is useful for decorative  
work. Shakespeare and America  
gladioli are seen in fine form and  
are much used for decorative work.  
White roses have been in very good  
demand, as has also valley, there  
being a number of weddings and  
funerals that called for the best.  
Dorothy Perkins rose sprays, with  
their wealth of beautiful pink blos-  
soms, are much in demand for wed-  
ding decorations. New York called  
for a large shipment for the Roose-  
velt-Alexander wedding, which used  
up some thousands of sprays. Tues-  
day last was American Beauty day in  
this city, it being the commencement  
day of the girls' high school, on which  
occasion each of the graduates car-  
ried a bunch of one dozen or more  
of these roses. This made a great  
demand and used up all the flowers  
in sight. At McKissick's they had a  
great run on their eastern stock,  
which is still in fine shape.

Rambler roses are now at their  
best and the beauty of the surround-  
ings to the dwelling whose porches,  
fences or arbors have been planted  
with these roses is very greatly en-  
hanced. This class of plant should  
be pushed by the retail growers,  
those who both grow and sell their  
stock. Examples of each variety  
should be planted at vantage points  
about the place, which, when in  
flower, would make a great showing  
and help materially in creating sales.  
Many new things are introduced to  
the trade year after year, some with  
merit and others without. If it was  
the practice to demonstrate their pos-  
sibilities in such a way the good  
things would remain to advertise  
their usefulness and prove a source  
of profit, and the worthless would not

long be allowed to encumber the  
place.

A wedding of interest was cele-  
brated on Wednesday, June 15, when  
Edward C. Dungan was married to  
Miss Parry, both of this city. After  
their trip the couple will reside in  
this city. Mr. Dungan is president of  
the Noll Seed Co., of Newark, N. J.,  
but still makes his home here, trav-  
eling to and fro each day to his place  
of business.

K.

STRAWBERRY POINT, IA.—Fred Ullman  
has removed here from Edgewood,  
bringing his greenhouses. He will also  
build a new house, 43x83 feet.

San Francisco.

TRADE QUIET.

Owing to the fact that the schools  
are closed and many families are away  
on their summer vacations, business,  
as a rule, is very dull in the city now.  
The retailers will, more than likely,  
experience this lull in business for  
some few weeks to come, but as they  
have completed what has been a very  
successful season, they can now well  
afford to take a much needed and well  
deserved rest. The supply of good  
flowers is scarce, but steady enough  
to meet the demands of business un-  
der present conditions. Roses are  
very scarce and the season of the Eas-  
ter lily is about over.

NOTES.

The Pacific Coast Horticultural So-  
ciety held its second monthly outing  
last Sunday, and were the invited  
guests of Henry Maier, who has the  
entire charge of Dr. H. Tevis' beau-  
tiful home in San Mateo. The recep-  
tion given the members by Mr. Maier  
was indeed very cordial, and one that  
will be remembered for some time to  
come. The members were also shown  
through the grounds of W. H. Crocke,  
in San Mateo, where the same hospi-  
tality was extended them by Wm  
Eldred.

The florists and growers of this and  
the Bay cities will hold their annual  
picnic next month at Santa Cruz. It  
is expected by the committee in  
charge that they will have a record  
attendance, as many new features in  
the way of entertainment will be held.

The flower show committee is work-  
ing hard to make the floral exhibit a  
grand success. Its attentions are now  
directed principally towards obtaining  
suitable prizes for the exhibitors, and  
their efforts along this line have been  
very successful.

Mr. Morris, of the Morris & Snow  
Seed Co., of Los Angeles, was in the  
city for a few days this week. He re-  
ports the seed business in the south-  
ern portion of the state good.

F. Luedemann has sold the Pacific  
Nursery at Baker street to Henry  
Kempf, and his place at Millbrae to  
his son, A. Luedemann.

ARTUS.

## New York.

## TRADE SLOW.

The business of the past week was rather slow, with a reaction for the better on Saturday morning, June 18. On the afternoon of that day the city and vicinity was swept by a terrific storm, wind, hail, rain, thunder and lightning all playing a part. At this writing, we have not learned of any damage to greenhouse property on Long Island, but trees were uprooted and in some instances struck by lightning, causing the death of several persons. Fourteen are known to be dead as a result of the storm, and it is probable the list will be increased, several small boats being as yet unaccounted for. All this happened after the weather prognosticators had given out that there would be a fine day for Col. Roosevelt's homecoming. However, the "Roosevelt luck" won out. The storm never touched him. The reception was over and he was on his way to Oyster Bay before it broke over the city. Stock is overplentiful and cheap. Roses, carnations, sweet peas and lilies, particularly the latter, are all in surplus.

June 20.—There is no improvement in the condition of the market. The weather is fair and warm, with a tendency toward a surplus of stock.

## NOTES.

Among the retailers of this city the event of the day has been the decoration at the Fifth avenue Presbyterian church, executed by Wadley & Smythe, for the wedding of Miss Eleanor Alexander and Theodore Roosevelt, Jr. Over the chancel there were three beautiful arches of Dorothy Perkins roses, the altar being decorated with white roses and lily of the valley on a ground of *Asparagus plumosus nanus*. Tall palms were in the background. The galleries were hung with garlands of mountain laurel and the pews were marked with bunches of lily of the valley. The scheme was very effective and was executed under the personal supervision of F. W. Smythe.

On the night of June 18, Horace E. Froment, one of the well-known wholesalers, entertained several representatives of the horticultural press at a dinner. When a choice selection of the good things of this life had been disposed of, all adjourned to Thurm's bowling alleys. In three games, Mr. Froment, who is a New Yorker, born and reared, showed the boys the benefit of early training, although he has not of late kept in practice. Vice-president Manda, who, we learn, is looking for bowlers to take to Rochester, might drop in and see Mr. Froment.

The members of the Astoria bowling team with their wives attended a play at the Broadway theater on the afternoon of June 18, after which all adjourned to Shanley's where a sumptuous repast was served. Those present were: John Donaldson and wife, Philip Einsman and wife, Philip F. Kessler and wife, Wm. H. Siebrecht, Sr., and wife, Wm. H. Siebrecht, Jr., and wife, Henry Siebrecht, Peter Jacobson and wife, Herman Lorenz and wife, and Doehefer and wife.

Don't forget the Florists' Club outing on June 28. Also attend the Greek-American Florists' Club outing on July 7. The Greek-Americans, when they get up an entertainment have the happy faculty of showing everybody a good time.

A. Moltz & Co. contemplate extensive enlargements and improvements

## ANNOUNCEMENT.

We beg to announce that on and after July 1, 1910, the premises on the first floor of the Coogan Bldg. will be under the management of **A. Moltz & Company**, who will sell at wholesale only, all flowers in season in addition to roses.

A. Moltz

Maurice L. Glass.

**A. MOLTZ & COMPANY, Wholesale Florists,**

Tel. 2921 Madison Sq. Open from 5 a. m. to 6 p. m. Coogan Bldg., 55-57 W. 26th St., New York.

in their place of business in the Coogan building at an early date.

We learn that a prominent Philadelphia firm talks of soon opening a wholesale store in this city.

## Baltimore.

The turn has come, and the wintry weather is replaced by sultry airs and a rising thermometer which already marks near 90°. Sunday was practically the first wholly clear day for months and old Sol tried himself. After so much cloudy and damp weather the effect on the growing plants was very perceptible and they wilted badly for a time. Receipts of carnations are naturally falling off, but the supply of roses keeps up, and many, although somewhat soft, are of good size and texture, the cool temperatures being favorable to them. Sweet peas are still coming in in quantity, and gladioli and hardy stock are in moderate supply. The commencement season is practically over, and with unusually large classes in the popular schools, the demand was pretty fair all around, the inquiries on Tuesday, Wednesday and Thursday practically absorbing all the really good stock in the market. June weddings continue, but as the month advances they are growing fewer and this source of business activity is about exhausted. From now on the main source of trade will be found in funeral work and the never-failing business done for the hospitals. These are items which vary somewhat, but practically never cease.

## NOTES.

It has been determined to hold a summer session of the Maryland State Horticultural Society on July 28, at the nurseries of J. G. Harrison, at Berlin, Worcester county. Reading of papers, discussions of the topics suggested thereby, excursions to the seashore, etc., will take up the time, and arrangements are being made for a large and interesting meeting. Richard Vincent, Jr., is the president this year, and with his well-known activity a stirring time may be expected.

The bedding plant trade has not been a very satisfactory experience this year, the variable and unseasonable season discouraging planters, especially the amateurs, but some of the public squares and parks shows extra good work, very creditable to the designers and executors, and, thanks to the many showers, unusually advanced for the date.

The pulling out of roses and carnations seems, as a rule, later this season than usual, owing assumedly, to the cool spells, which have so long prevailed. From now on there will be few idle days, and the prospects are that tearing out, filling and planting will strike a season of somewhat torrid heat.

Fred'k. C. Bauer is building two new houses this summer of modern construction. Albert Fiedler will put up a carnation house, 20x100; James Hamilton, Mt. Washington, will add one more to his already large number of houses, 24x100, intended for asparagus.

A team of our bowlers goes down Wednesday for a match with the Washington Florists' Club team.

S. B.

## Grand Rapids, Mich.

This spring so far has been most uncertain and disagreeable; it is in a class by itself. March was one of the most delightful months and up to about April 15, when it changed to cold, rainy weather, which continued almost uninterrupted until about June 10; but despite the fact of the cold and backward spring, the volume of business done far exceeds that of other years. Everything was cleaned up, and especially geraniums. A great many more boxes and baskets were called for than other years, and the factories have been beautifying their places very largely with bright beds of cannas, salvias, geraniums and many have planted shrubbery. The factory planting has been encouraged for some years by prizes being given by the newspapers and board of trade, which has been very encouraging so far in that line.

## NOTES.

N. B. Stover, superintendent of the floral department of the Grand Rapids Greenhouse Co., resigned his position June 2 and will hereafter be located in Terre Haute, Ind., having bought out the retail cut flower store of Otto Heintz at 113 South Sixth street. For the present he will buy his output, but will build houses a little later on.

Henry Smith will rebuild several of his old houses this spring and make them modern. He has the largest crop of peaches that he has had for many years, all due to spraying at the right time, and, being on high ground, his strawberry crop was hurt considerably by the late frosts.

L. Bruin Slots, who has been in the hospital for the past six months and who has had his leg amputated in three places, the last being a very successful operation, has returned to his home. He is improving very fast and will go through the balance of life with one leg.

Eli Cross is planting very largely on double violets for next season, and will return to his former hobby, which was a marked success many years ago. He has also planted two houses of roses, mostly Killarney.

A farewell will be given N. B. Stover and wife on June 29 by the Odd Fellows and Rebekahs of western Michigan. Mrs. Stover is treasurer of the Rebekah Assembly of Michigan and also a past president.

Jas. Schols will plant about 10 houses of his favorite crop of single and double violets. Mr. Schols intends making a trip to Europe a little later in the season.

Nick Luth has leased the greenhouses at the corner of Dickenson and Madison avenues and will grow flowers and vegetables. We wish him success.

Alfred Hanna & Sons have had one of the most successful seasons and have planted out about two acres of carnations in the field.

Wm. Cunningham reports a very good season, with everything cleaned out.

**WEATHER HURTS BUSINESS.**

The remark of the lamented Mark Twain, to the effect that, whatever happened in New England, there was always plenty of weather, has been amply justified of late. Figuratively speaking, there has been weather to burn, but in reality you could not burn it if it was saturated with kerosene, it was so dull, damp and sticky. The effect on business has not been good, but the past week was much better than the preceding one. Graduating exercises called for a considerable amount of stock and it is expected that much more for the same purposes, will be in demand this week, therefore, the trade, in general, is feeling reasonably cheerful. It is recognized as a fact that the dark and cool weather has greatly benefited the trade. It has held back stock and brought much of it to market in better condition than it would have been had the weather been generally warm. Prices are much better than they were this time last year and there are experienced dealers who say that they are better than they have been for the past five years. This is encouraging and goes to show that the claim that this is a horticultural center is well founded. Good Kaiserin roses have, within the past week, sold as high as 15 cents each, but the stock that brought such a price was exceptionally fine with very long stems. Good carnations have sold readily for two or three cents. Unless there is a great change in weather conditions, it looks as though there will be a thorough clean up of everything that is any good this week.

**NOTES.**

June 17, "Bunker Hill day," was generally observed as a holiday, but patriotic holidays bring no profit to the florists. Practically all the stores, both wholesale and retail, closed by 1 p. m. In addition, it was a very disagreeable day. When there was not pouring rain, there was a heavy "Scotch mist."

Henry Robinson and William Penn, —no relation of the late William of Pennsylvania—went to Lake Minnesanka recently on a fishing trip. By some miscalculation the bait gave out early in the day and thereafter Henry used frankfurters. He says that hereafter he will use no other.

Galvin has a beautiful window display of a miniature lake filled with water lilies, with an electric fountain in the center. The background is of tall white lilies, the lake being bordered with grasses and small ferns.

Wax Bros. have a continuous window display of the finest stock in the market. The arrangement is frequently changed, but it is always artistic and attractive.

Patrick Welch celebrated Bunker Hill day at his country home, Old Orchard, leaving David and Edward to run the big store.

P. L. Carbone is hustling around and getting everything in good shape before leaving for his annual European trip.

Thos. J. Clark has had continued success since he opened his store at the corner of Boylston and Berkley streets.

At all three of his stores, Massachusetts avenue, Cambridge and state street, Hoffman is doing a good business.

John McFarland, North Easton, continues to bring in excellent stock of gardenias and Pres. Carnot roses.

Edward MacMulkin's store never looked finer than it does at present. He always has the goods.

All the boys who attended are enthusiastic over their recent trip to Wm. Sim's, Cliftondale.

Andrew Christensen, of Stoneham, is bringing fine carnations to market.

Pierce Bros., Waltham, are sending in very fine gladioli.

**Lowell, Mass.**

The florists of this city show evidence of increasing prosperity. This is as it should be, as great advancement has been made along other business lines in recent years. It is gratifying to state that the craft has been generally recognized as having among its members the men best fitted to carry on the work of beautifying the city. H. B. Greene, a well-known grower and retailer, has for several years been a park commissioner. In addition to this he is now president of the board of trade. Chas. Whittet, a member of a family of well-known florists, has, through successive city administrations, been continued in the office of superintendent of parks.

**New Crop Ferns****FANCY and DAPPER ready May 1st.**Special price for large orders  
Price \$1.25 per 1000.**CALDWELL THE WOODSMAN CO.,**  
**Evergreen, Alabama**

Business has been very fair of late, graduating exercises and funeral work calling for a large amount of stock.

**NOTES.**

It will please many who were intimate friends of the late Edwin Shepard to learn that the place where he spent a large part of his long life has been taken in hand, greatly improved and will be known as the Shepard Gardens Carnation Co. P. J. Riley, a local capitalist and an old-time friend of Mr. Shepard's, has taken the place, made great improvements and is now growing carnations on an extensive scale. S. H. Narlitz, formerly of Syracuse, N. Y., is the efficient foreman.

On June 16, Jas. J. McManmon furnished fine floral decorations for the graduating exercises at Notre Dame academy. The event must have been doubly pleasing to Mr. McManmon as his brother, Rev. Thos. P. McManmon delivered the graduating address to the young ladies.

The range formerly conducted by Chas. Marshall is now known as the Marshall Avenue Greenhouses. Owen J. Mechen is manager and James O'Leary is foreman. Mr. Marshall, we learn, is now a resident of Dedham and has engaged in farming on a large scale.

One of the notable figures in the business of this city is the head of the firm of Whittet & Co. Though now well advanced in years he is hale and hearty and does a man's work at anything in the florist line, from growing to designing and decorating.

Morse & Beals, who succeeded to the business of the late Geo. Patten, recently executed a large amount of very high class funeral work. Mr. Morse, of this firm, is a very fine designer.

Whittet & Co. have been very busy furnishing flowers for graduating exercises, many out-of-town orders having been filled. They are also doing a large amount of landscape work.

## Salt Lake City.

The usual summer quietness prevails at the retail stores, giving the hard working store people a chance to breathe and have some recreation. From all indications the retailers have had a very prosperous season. The Sanders Granger Floral Co. has only been in business about 18 months. Its business increased to such an extent that an automobile has been added to the livery recently. W. W. King is planning a new store building to accommodate his growing business. The Ault brothers of the Huddart Floral Co. have just finished an apartment house that will give them a neat income. Chas. Soder, who manages the floral department of the Walker Dry Goods Co., has just closed a deal for a valuable ranch in the Strawberry valley; that is not speaking bad for a city of less than 100,000 people that supports 17 flower stores and more than half of the stock is shipped in from adjoining states. Among the

growers we find everything in fine shape and everyone seems to be ahead with his work for this time of the year. We have had an unusual drought, not having any rain for nearly four months, but this has not affected the florists much, as they all depend on irrigation. It has been bad for the dry farmers. Mr. Barber, of Centerville, who has been growing sweet peas for this market for several years, is building a large house to grow these and chrysanthemums for the winter market. John Reading, the pioneer florist of this state, has a fine lot of sweet peas and other garden flowers that he puts on this market daily. He is located at Centerville.

UINTAH.

## Brampton, Ont.

The most remarkable feature in an extraordinarily successful year's trade has been the volume of business during the present month of June. When the retailers throughout Canada find this so, one may be sure that it is also the case at the Dale Estate, where the packers and office staff have been taxed to their utmost during the past three weeks. Happily for all concerned the quality of roses and carnations has been unprecedented for the time of year, though the quantity has been hardly equal to the enormous demand. W. Jones, for some years with Hooley Bros., Southampton, Eng., now has charge of the orchid section at the Dale Estate and expects great things from his favorites when his present glass area is doubled before the fall of the year. Three large 850-foot houses are now ready for glazing, and will be well stocked with violets before many weeks have passed.

On turning over one of last year's issues of the AMERICAN FLORIST, the writer came across the paper read by the late president of the Canadian Horticultural Association, H. E. Phillpot, at the last annual convention held in Toronto. There can be no question of the far reaching results of Mr. Phillpot's handling of the important matter of "Packing and Shipping Successfully," and judging by the lack of complaint during this last season of grace it would well repay growers to study this paper during their holidays.

Frederick Keeble, of the Gardener's Chronicle, London, Eng., and Leonard Sutton, Reading, visited the Dale Estate greenhouses a fortnight ago before crossing over to the United States.

W. G. Peacock, bookkeeper at the Dale Estate, left June 22, by the S. S. Lusitania, for a six weeks' holiday in London, Eng.

SUMMER CONDITIONS.

The weather has become very warm and, as was expected, has changed to summer. Flowers of all varieties are plentiful and begin to show the effects of summer heat. Carnations go quickly to sleep and the market here on these flowers was influenced greatly by shipments from Chicago. Roses also are plentiful, Richmond and Killarney leading. Long stemmed American Beauty were plentiful, short and medium not so plentiful. A few closing exercises and an occasional bunch of flowers sent to the leading actors at the summer garden theaters, form, outside of funeral work, the only outlet for flowers. Our prominent retailers will now figure on their summer vacations. Fancy ferns are now in and crowding the hardy ferns. This variety only sells when fancy are not obtainable.

provements. This establishment is headquarters for the Kirkwood contingent, the majority of growers shipping their products to this young and enterprising firm.

There is considerable loud talking being heard by the Bentzen Floral Co.'s baseball club which expects to wipe up the earth with C. Young & Sons Co.'s team July 21. Youngs are keeping quiet but they will be heard from on picnic day.

Superintendent H. C. Irish of the Missouri Botanical Garden was the principal speaker at a meeting of Shaw's Garden Improvement Association. Prof. Irish told how to plant trees and further the improvement of Tyler place.

Richard Frow, of Normandy, was damaged to the extent of 3,500 feet of glass by the recent hailstorm. He has 12,000 square feet of glass devoted to general bedding plants and carnations. He also grows smilax and asparagus for the trade.

Young & Sons Co.'s show windows are a pretty sight, a great display of gloxinias and begonias and with them little chickens fresh from the incubators strutting around amongst the flowers.

The wholesale houses closed their doors at noon on Saturday and will close every evening at 5 o'clock during the summer months.

Theo. Miller's store on Delmar boulevard presents a very handsome appearance, the improved front being elegant and artistic.

F. H. Weber stated that business has slowed down. Fred now has time to go scouting in his new up-to-date automobile.

Al Gumz will have charge of the games at the Florists' picnic July 21. Al is somewhat of an athlete himself.

W. F.

CINCINNATI, O.—Wm. Gardner, who assumed charge of Olinger's greenhouses when Mr. Weiland retired from the firm of Weiland & Olinger, was down to spend Sunday and is contented with his new berth. He looks well and says the prospects for next season are very bright.

NEW ROCHELLE, N. Y.—Hitchcock & Co. have been in their new store on Main street for some time and are now busy erecting a conservatory in the rear. Mr. Hitchcock reports a very good season's business both from the store and the nursery, which is carried on in connection with it. This firm has pushed right ahead for the last two years and seems to do its share of the business.

Can't Live Without Flowers.

New York, June 21.—Flowers are one of the necessities of life and should be brought within reach of the poorest, believes John D. Crimmins, a wealthy philanthropist. Mr. Crimmins is at the head of a committee which is urging the establishment of a city market under the Queensboro bridge, where flowers may be sold at low prices. "It should be possible for a poor child to buy a flower for two or three cents, or a wild flower for a penny," says Mr. Crimmins.

## The Seed Trade.

### American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D.C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, at Atlantic City, N. J., June 21-23, 1910.

ONION SET crops in the Chicago vicinity are looking well; a good rain is needed, however.

GILROY, CALIF.—Waldo Rohnert and Miss Edna Vile were married at San Felipe June 15.

SHEBOYGAN, WIS.—The J. H. Allan Seed Co. is completing a new 4-story warehouse 50x130 feet.

THE order of the postal department regarding transparent seed packets goes into effect July 1.

WISCONSIN pea crops are looking well; beans have only been in the ground 10 days and need rain.

VISITED CHICAGO.—Wm. B. Lucas, of the J. H. Allan Seed Co., Sheboygan, Wis.; W. T. Hutchins, Santa Rosa, Calif.

CHICAGO.—Contract prices on the board of trade June 22 for grass seed were noted as follows: Timothy, \$4.55 to \$4.60, October. White clover, from 20 cents to 25 cents.

HARRY G. WINDHEIM, of the Nebraska Seed Co., left Chicago at 10:30 Monday morning for the convention, being a day late because of celebrating his mother's eightieth anniversary of her birth.

THE western delegation which left for Atlantic City convention Sunday evening at 5:30 on the Pennsylvania included George S. Green, Leonard H. Vaughan, J. C. Robinson, C. H. Coy, E. B. Gurney, S. A. Wilson, S. F. Leonard, E. S. Leonard, Sam M. Sibley and W. W. Schaefer.

ROCHESTER, N. Y.—F. A. Stecher, of the Stecher Lithographing Co., who was operated on for appendicitis about a month ago, is making good progress toward recovery.—Chas. H. Vick, who has charge of the trade exhibition and souvenir programme for the coming convention of the Society of American Florists, is a very busy man these days.—Chas. H. Vick and Wm. T. Fonda are attending the Atlantic City convention this week.

Lettuce, Onion, Sweet Peas,

Growers for the Wholesale Trade Only.

SAN JOSE, CALIF.

### French Bulbs.

The French market on White Roman hyacinths as we go to press indicates about the following going rates to dealers for the various sizes:

11 to 12 centimeters, 60 francs.

12 to 13 centimeters, 80 francs.

12 to 15 centimeters, 92 francs.

Prices on other French bulbs except Paper White narcissus and freesias are also higher.

### Rogers Bros., Alpena, Mich.

This company, of which Austin L. Rogers is president and general manager, and George R. Warren is secretary and treasurer, are growers of the choicest strains of seed peas and beans. The company's plant is located on Fair avenue, between Tenth and Eleventh streets, Alpena, Mich., occupying one block.

Business was carried on formerly by this firm in northern New York, where for 24 years the main office and seed house were located.

The foundation of this business was begun in 1875 by A. L. Rogers at 20 years of age, on a farm in the town of Cape Vincent, New York, left by his father, who died in Mr. Rogers' infancy.

The small beginning was made by Mr. Rogers by growing plants, vegetables and fruits for nearby markets. Two years later seeds were grown from beets, carrots, parsnips, peas and beans.

In 1878 a three-story seed house 30x40 was erected, and his brother, Everett E., became interested in the business and seed growing was permanently taken up. In 1880 they combined forces with R. B. Hungerford at Adams, N. Y., who was a former partner of Artie B. Cleveland, whose father, J. M. Cleveland, had been growing peas and beans for a quarter of a century prior to this, the Cleverlands later forming the famous Cleveland Seed Co. at Cape Vincent, N. Y., and New York City. Mr. Hungerford's stock of peas and beans combined with Rogers Bros.' made at that time a substantial seed stock.

The firm of Rogers Bros. and R. B. Hungerford carried on the business for a year, occupying the original buildings used by J. M. Cleveland. In 1882 Rogers Bros. were fortunate in securing the most desirable site in the center of the village of Chaumont, N. Y., where they built a substantial seed house three and one-half stories, 40x70. Small seeds were discontinued and their whole attention was given to growing garden peas and beans. In 1887 an excellent farm of 360 acres adjoining the village corporation and Chaumont river, was purchased. Its ideal location and rich soil

was a decided advantage in the breeding and developing of the choicest strains of pea and bean stocks.

In July, 1890, Everett Rogers was injured while crossing the railroad track at the farm, resulting in his death the following September. A. L. Rogers continued the business in the firm's name, being assisted by George R. Warren who began with them as their bookkeeper in 1882.

Prior to the death of Everett E. Rogers, business continued to grow. The Chaumont plant was enlarged and improved machinery was installed. In 1902 the business was incorporated under the name of Rogers Bros.

Twelve years ago they began growing seeds in this state, and as the business increased in volume, it became apparent that Alpena would be a suitable city in which to build and it has resulted in the sale of the seed house, office and the company's property in New York and transferring the main office, seed house and storehouses to this city, where buildings of the required capacity have been erected and are now occupied by the company.

The office is one with ample room, well lighted and supplied with steam heat, and one in which the office force find a pleasure in carrying out the work that devolves upon them.

Seed house No. 1 in the rear of the office is 40x125 feet, three stories high, with a basement. No. 2 storehouse is separated from No. 1 by a fire wall and has a capacity of three floors 40x100 feet. Storehouse No. 3 is separated from the former named buildings, with floor space of 30x120 feet. No. 4 is a brick structure erected with a truss roof, giving a floor space above the basement of 44x128 feet, without a post inside of the space mentioned.

The horsebarn is one of modern design 36x50 feet, two stories high with a commodious carriage room and well finished stalls for the company's truck team and driving horses, as well as a harness room. The barn has a cement floor covering the whole space and is supplied with running water. A large sized shed has been built for the free use of the farmers—growers of seed—when delivering their crops, and is equipped with iron feed boxes where the teams can eat and be comfortable.

The firm's business is increasing from year to year, giving to farmers an opportunity to grow seed at a profit to them, and thus extending out into portions of the best farming lands, establishing a business which is far reaching, in which farmers and business men are becoming more and more interested.

The company has an office force under the supervision of G. R. Warren, secretary and treasurer of the firm, who has no small task in financing this department into which all business matters of the concern find their way.

In connection with this are the seed houses of which Burt Gilbo is superintendent, having associated with him a shipping clerk, together with 16 assistants in the handling of the seed which is grown on about 12,000 acres. Mr. Gilbo was formerly with the Cleveland Seed Co. for about 20 years, thus giving him an experience which well qualifies him for handling the seed with experienced men through whose hands this immense quantity of seed passes to be milled, hand-picked, bagged and stored ready for shipment.

Mr. Rogers endeavors to visit their customers at least once a year. These are some of the leading seedsmen and canners of peas and beans in the United States, many of whom have been steady customers for over a quarter of a century.—Alpena Echo,

## Market Gardeners

Greenhouse Vegetable Growers and  
Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President;  
Franklin DeKleine, Grand Rapids, Mich.,  
Vice-President; S. W. Severance, 508 Illi-  
nois Life Building, Louisville, Ky., Secre-  
tary; M. L. Ruetenik, Cleveland, O., Treas.

BROWNVILLE and Aransas Pass, Texas, will ship about 400 cars of watermelons this season. Houston growers will commence shipping the end of the present week.

DAYTON, WASH.—Fruit growers and truckers are worried over the extended drought in this vicinity. Rain is needed at once to save the crops, and unless it comes soon many truckers will plow under their crops and replant.

CHICAGO.—Texas watermelons are in and heavy shipments are expected from Houston during the next week. Good cucumbers are scarce, though there are plenty of large, poor colored ones on the market. Peppers are in and selling at \$1 to \$1.25 per pony crate (6 basket). The heat has caused a rapid drop in Michigan berries.

### Lime As a Fertilizer.

The element calcium is a necessary constituent of plants; but as almost all soils contain it in sufficient amounts for their needs, the action of lime is not like that of a direct fertilizer. Indirectly, however, it is an agent by which insoluble potash is changed to a form available as plant food. For this very reason, says Bulletin 163 of the Connecticut Experiment Station, it must not be made to take the place of potash fertilizer unless it is absolutely certain that large quantities of insoluble potash are present in the soil under consideration. Otherwise, the time when the soil will be depleted of potash is simply hastened. Whether the addition of lime affects the solubility of soil phosphates is undecided. Any chemical action on these compounds must, at least, be slight.

The other important chemical action of lime is to correct soil acidity. This lies largely in its effect on low forms of plant life. Neither of these reactions is affected by the form of lime used. Soil, air and water contain much carbonic acid, which quickly acts on burned lime, on water-slaked lime, and converts it back into a calcium carbonate, the form in which it existed before burning. The kind of lime to be used thus depends almost entirely on the cheapness of the brand when figured to burned lime or calcium oxide, and on the ease with which it can be handled from the car to the field. The only time when the use of burned lime is inadvisable is when large quantities (2,000-3,000 pounds) are necessary to correct the acidity and the application is to be made in the spring. It takes some time for such quantities as these to be changed to calcium carbonate, and in the meantime the caustic lime is burning out the humus in the soil. If large amounts of quick lime are to be applied to the soil, it should be spread in the early winter and worked into the soil in the spring.

Lime has a further effect upon soils which may be partly a chemical action, but which is in the main an ef-

## Francis Brill

—Grower and Dealer—  
**Hempstead, L. I.**  
**NEW YORK**

fect upon their mechanical character. Clay soils are probably the most benefited, for it greatly increases their porosity. The movement of water, both upward and in drainage, is thereby facilitated. A possible injury may result, however, if clay soils are limed too much or too frequently, through its cementing action, analogous to that when used in mortar. Paradoxical as it may seem, light soils are also benefited, for lime increases both their water holding capacities and their capillarity.

### Canadians Hard Hit.

Reports from various parts of Canada indicate that truck crops have been seriously injured. Tomatoes, potatoes, peas, beans and sweet corn were ruined by heavy frosts on the island of Montreal. Strawberries, however, while injured, managed to pull through, as have cabbage, celery and other hardier truck, and as the weather begins to brighten up, June 10, these are now out of danger. Reports from Sherbrooke, Que., and various parts of Ontario state that tender plants, such as tomatoes and cucumbers, are a total loss, while the small fruit crops will be seriously curtailed. In the Brockville district early seeding was long delayed, owing to heavy rains, and this, together with the recent frosts, has ruined the prospects of good crops.

### Chinch Bug Infection.

Bulletin No. 176 of the Oklahoma Experiment Station says that there has been quite a steady demand throughout the state, in the chinch bug infected localities, for the disease which is contagious and fatal to chinch bugs. The entomological department has this disease on hand for distribution. It is free to all parties interested, and may be obtained by them if they will send chinch bugs to the department for the infection. After these bugs are infected with the disease a portion of, or all of them, will be returned to the sender in order that the disease may be disseminated in the infested fields. These infected bugs should be placed in the fields where the uninfected bugs are at work. During very hot and dry weather this disease is not known to work as efficiently as it does during wet weather.

### Estimated Weights by Express Companies.

The following estimated weights for interstate markets adopted by the express companies are taken from the Southern Shipper:

The express companies agree to carry the following commodities from points in Texas, Louisiana and New Mexico, at the following weights. (Commodity tariff No. 101 A., taking effect May 8, 1907.)

Lettuce, spinach, chicory, escarol, parsley, and endive, per flour barrel, 60 pounds; per sugar barrel, 80 pounds.

Mixed vegetables (potatoes excepted) and vegetables not otherwise specified, per barrel, 110 pounds, in crates 16x16x16, per crate 65 pounds; in crates 12x12x24, per crate, 40 pounds.

Cucumbers, in barrels, sugar barrel, 200 pounds; in half-barrel boxes, per box, 20 pounds; in bushel boxes, per box, 40 pounds.

Beans, peas, okra and peppers, per one-third bushel box or basket, each 10 pounds; per bushel basket or hamper, each 30 pounds.

Cauliflower, in crates, 12x18x24, per crate, 50 pounds.

Cantaloupes, standard crates, 12x12x24, per crate, 60 pounds; in sugar barrels, per barrel, 200 pounds.

Tomatoes, in four-basket crates, 23 pounds; in six-basket crates, per crate, 35 pounds.

Peaches, in four-basket crate, 20 pounds; in six-basket crate, 40 pounds.

Pears, in sugar barrels, 200 pounds.

### Prices of Indoor Fruits and Vegetables.

New York, June 18.—Mushrooms, 65 cents to 75 cents per pound; cucumbers, cold frame, 42 cents per dozen; lettuce, cold frame, 50 cents per dozen heads; tomatoes, 17½ cents per pound; grapes, Hamburgs, imported, 75 cents per pound; Hamburgs, domestic, 50 cents per pound; Gros Colman, \$1 per pound; Muscats, \$1.65 per pound; peaches, English, \$5 per dozen; Belgian, \$5 per dozen; nectarines, \$5 per dozen.

Chicago, June 22.—Mushrooms, 40 cents to 50 cents per pound; cucumbers, 45-50 cents per dozen; leaf lettuce, 15 cents per box; head lettuce, home-grown, 30-75 cents per tub; wax beans, 75 cents to \$1.25 per box; tomatoes, \$2-\$2.25 per crate; peppers, \$1-\$1.25 per pony crate.

WITH tomatoes, the best results are obtained from the application of a complete fertilizer. In this case, the addition of potash and phosphoric acid helps in the formation of the fruit, while nitrogen helps to produce a strong, thrifty plant with good leaf and stem development.

VAUGHAN'S SEED STORE,  
Chicago. New York.

### Providence.

Commencement days, graduating exercises and a good number of wedding decorations and funeral designs all helped to create a good week's business. Most growers have their chrysanthemums transplanted to benches, the stock looking fine and healthy. The rose growers have their stock re-benched for another season. All are about to start to rebuild, paint and glaze, and after all this is done vacations will be in order. There is always a shortage of good vincas, English ivy, and other vines for vases and window boxes, as well as of hydrangeas in 4 to 6-inch pots. The weather has been cloudy, with rain all week except Tuesday and Wednesday, when we had some extremely warm weather for those two days, when the weather took on its normal condition of the past month which helps to keep greenhouse cut flowers in first class condition for so late in the season. All kinds of seasonable cut flowers are plentiful. Roses are over abundant and consequently very cheap. Outdoor roses are coming in in good quality and while they last will help to keep the price of greenhouse roses down. Carnations and sweet peas are very plentiful and cheap. There are plenty of gardenias, orchids and lily of the valley coming in to supply all demand at regular summer prices. Peonies are still coming in in good quality but do not sell well. Irises of the German varieties are coming in, also some oriental poppies; these sell well. Candytuft and stocks are about cleaned up. Liliun auratum is seen in the stores in limited quantities and are soon bought up. Asparagus, adiantum, smilax and fancy and dagger ferns were in good demand during the past week.

### NOTES.

Wm. Hay reports a very satisfactory first week's business at his new wholesale flower market at 21 Clemence street. Ed. Murray, his manager, is a very busy man putting on the finishing touches to the store, looking up business, buying and advertising.

The regular monthly meeting of the Gardeners' and Florists' Club of Rhode Island, will be held in the evening of June 20. The members will then take action in regard to their regular summer outing and the proposed trip to the Rhode Island Agricultural College at Kingston.

Arthur Griffin, for many years head gardener for Eldridge T. Gerry at Newport, has purchased a place at Woburn, Mass., consisting of 12 acres. Mr. Griffin intends to grow a general line of cut flowers for the trade.

All the regular help and an extra force was very busy with Jas. B. Canning June 12-13 owing to the very extensive decorations at Brown University both in the halls and on the campus.

The flower and seed stores will be open the first Friday in July to close

## The Nursery Trade

### American Association of Nurserymen.

W. P. Stark, Louisiana, Mo., President;  
E. S. Welch, Shenandoah, Ia., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-sixth annual convention to be held  
at St. Louis, Mo., June, 1911.

PENN YAN, N. Y.—Howard Evarts Weed, the Chicago landscape architect, lectured here recently on "A More Beautiful Penn Yan." The lecture was under the auspices of the Business Men's association and was illustrated by lantern slides.

PEONY growers would confer a great favor on us and our readers if they would kindly send a list of the varieties that have flowered most freely during the present unusual season, also of those that suffered worst during the inclement weather this spring.

THE proceedings of the eleventh annual convention of the American Association of Park Superintendents held at Seattle, Wash., August 9 to 11, 1909, has been received, containing a full report of the proceedings, list of officers, etc. The next convention is to be held August 9 to 11, 1910, at Harrisburg, Pa., for which an attractive programme has been arranged.

NORTH ABINGDON, MASS.—W. H. Wyman, of the Bay State Nurseries, has been persecuted the past four years by an unrelenting enemy, who has destroyed hundreds of dollars worth of property. Under the cover of darkness, the hidden foe wreaks vengeance by slashing young trees and firing buildings. Mr. Wyman's trouble began when he accepted the office of chief of police and made the town "dry."

LOS ANGELES, CALIF.—Residents of the southeast section of the city are protesting against the destruction of their fruit trees by order of A. R. Meserve, county horticultural commissioner, because of the presence of black peach aphids. Heretofore, objections have been made by individuals only, but it is said those affected are contemplating organizing and appointing committees to wait upon the county authorities with a view to having the order modified. Spraying and fumigating has been tried, but found ineffectual.

### The Peony Exhibition.

While the general run of stock, as noted in our last issue, was not as good as it has been in previous years, there were many fine specimens. In the lower hall, the bedding by R. & J. Farquhar was fine work. The borders of fuchsias and other flowering plants from Mrs. Fred. Ayer, West Newton (George Page, gardener), were a great attraction. In the 30 varieties of peony class there were many splendid blooms. Notable were Achille, Duke of Devonshire, Queen Victoria, Rossini, Festiva Maxima, Prince George, Madame Coste, E. G. Hill, Gigantea and Amazon. Mme. de Galhau, rose pink, for which Geo. H. Peterson took first prize for single

# A BLUE ROSE

## The Greatest Rose Novelty of the Century

*It flowered with us this season and was greatly admired.*

The New Rambler (Violet Blue), hailed by the German rose growers as the forerunner of a genuinely cornflower blue rose, is a seedling of Crimson Rambler, very vigorous and hardy, and free blooming.

## A GOOD INVESTMENT

Evansville, Ind., Feb. 18, 1910.  
AMERICAN FLORIST CO.  
Chicago.

DEAR SIR:—I am using your Trade Directory and out of 4000 nurserymen we circularized only two circulars came back. I am enclosing these names as you may want to make the changes.

A. J. LOCKYEAR.  
New Edition Now Ready—Price \$3.00.

bloom, we consider a remarkable production. Mons. Krelage, dark pink, was also very fine. Couronne d'Or, with which Bertrand H. Farr took first prize, much resembles Festiva Maxima and was mistaken by some experts for that variety. Mathilde de Rosaneck, rose pink, and Rubra Superba, crimson, were very fine.

The 40 varieties of rhododendron blooms exhibited by Walter Hunnewell, were notable attractions. The specimen plants of Begonia Rex, by Mrs. Fred. Ayer, were also fine features. The exhibit of E. J. Shayler, Wellesly Farms, Mass., while not entered for competition, was so good that it was awarded a silver medal. The display of single peonies by T. C. Thurlow's Sons, West Madbury, Mass., was good, noteworthy being Adana and Diana. The dark pink seedling peony, now in its third year, exhibited by Jos. H. Chase, Malden, Mass., is very large and looks promising. The Eastern Nurseries, Jamaica Plain, Mass., made a good exhibit of herbaceous stock. The Blue Hill Nurseries, South Braintree, made a fine exhibit of pyrethrum. Among the miscellaneous exhibits, nothing was more noteworthy than the strawberries from Geo. V. Fletcher, Belmont, Mass. There were three varieties: Barrymore, Marshall and Golden Gate. It would only take two or three of them to make a plateful, that is, a restaurant plate.

## When Traveling in Europe

Do not forget to inspect our nurseries. We grow immense quantities of Rhododendrons, Azaleas, Magnolias, Boxwood, Conifers, Pot-grown plants for forcing, Lily of the Valley, Evergreens, etc. of high grade and quality. Our nurseries are on sandy soil from which trees transplant readily. From Amsterdam to our nurseries it is only 25 minutes by rail and a train runs every hour.

### BUSINESS MEETING.

In addition to the president's address and reports of other officers, there was considerable interesting discussion. Interesting remarks were made by President Farr, Secretary Fewkes, Prof. Sandford, of Hamilton college, and others. A motion to drop members absent for more than five years was adopted, the secretary being instructed to notify the absent members. The nomenclature committee was continued. B. H. Farr, Reading, Pa., Jos. Dauphin, Queens, N. Y., and Prof. Batchelder compose the committee. Prof. Sandford proposes to give a prize for a variety at next exhibition. On motion of the secretary, a committee was appointed to consider the recommendations of new varieties made in 1907. The committee follows: R. T. Brown, Queens, N. Y.; W. A. Peterson, Chicago; A. H. Fewkes, Newton Highlands, Mass. It

### To Be Done Now.

#### IN THE GREENHOUSES.

Watch for thrips in cyclamens and spray with nicotine, removing the worst affected leaves. A somewhat heavy shade is necessary now.

Get all the stock possible outside now into frames or plant protectors and clean the houses thoroughly.

Propagate regal and show pelargoniums as they go out of flower. Then place the plants in the open air.

Look out for flaws in the glass in the palm houses or the foliage may be ruined. Paste a sheet of newspaper over them when found.

Remove the flower buds from all young stock of begonias as it checks the growth to bring these to perfection.

Keep the surface soil well stirred in the chrysanthemum benches and also keep weeds down.

Where poinsettia stock is scarce, place the old plants in gentle heat to produce cuttings more rapidly and keep on propagating.

Clothilde Soupert, Baby Rambler and other dwarf roses should be in a semi-shaded frame now. They cannot stand full exposure in the greenhouses.

Pot on young stock of palms, pandanus, crotons and dracenas before the plants get potbound.

Look carefully after winter flowering geraniums and repot directly they need it. If they get too hard in the pots the growth will be checked.

#### OUTDOORS.

Keep after the the big weeds that spring up in places where the hoe or cultivator does not reach. Never allow them to go to seed but have them pulled regularly.

Do not allow manure to heat and loose all its substance. If it cannot be used, damp it down and run a team over it or in some other way press it firmly.

In the absence of heavy rain see that all newly planted trees and shrubs are well soaked with water regularly.

Keep down the weeds in the herbaceous borders and stake or in some other way support tall growing plants.

Feed hollyhocks liberally now, especially old clumps that have not been moved of late.

Finish thinning and hand weeding of beets, onions and other advancing crops and keep the cultivator going between the rows.

Celery must have abundance of water now. If the young plants are stunted early in their career the produce will never amount to much.

### 20 Per Cent Discount on

## Bedding Plants for Stock

For the next ten days we will allow **A DISCOUNT OF 20 PER CENT.** on any of the following plants except Ferns and Cyclamen:

Specimen 10-in. and up \$2 50.

Stake and tie tomatoes wherever possible. The fruit is never so good from plants scrambling about on the ground as from others properly looked after.

Nitrate of soda is a fine stimulant now for leafy crops if there is plenty of moisture present.

Keep the seed pods and old flowers regularly picked off the sweet pea rows or the flowering season will be short.

### Hood River Fruits.

With the development work completed and now under way, it is said by local orchardists that by fall Hood River, Ore., will have the greatest acreage under cultivation to fruit of any section in the state. By fall planting time, it is estimated that 15,000 acres will be set to orchards. The largest amount of activity is taking place in the upper valley, where one company is developing 15,000 acres. This company has this summer cleared 100 acres and planted half of it. The work is being done by a new departure in land clearing, a big donkey engine of enormous power being used instead of powder. One thousand acres are to be cleared at once. A number of Portland people are developing a large tract of it, among them F. A. Jones, who has put out the largest pear orchard in the valley, having set 40 acres to Beurre d'Anjou.

## American Beauty PLANTS

A few thousand nice plants, 2¼ and 2½-in. pots.

**John Burton,**  
Chestnut Hill, Phila.

## Brides and Maids

2½-in. \$2.50, 100; \$25.00, 1000.  
Numerous other good sorts in prime stock.

**THE LEEDLE FLORAL COMPANY**  
SPRINGFIELD-OHIO.

For the first time in its history strawberries by the carload are being shipped out of the upper valley this year. These are now largely supplying the market with Hood River berries. From 800 to 1,000 people are now engaged in the work of cutting timber and developing land in the upper valley.

## Alternanthera JEWEL

We can still supply first-class plants of this magnificent new bedding plant. If you buy now, you will be able to have stock for another year. To clean out, we will make a special price of \$1.50 per doz.; 10.00 per 100.

## Gardenias

We can quote you in any quantity. 3-in. \$18.00 per 100; 2½-in. \$12.00 per 100. Getting down on 'mums, but still have a few thousand at \$25.00 per 1000.

**CHARLES H. TOTTY,**  
MADISON, N. J.

Cash with order.

**BYER BROS.,** Chambersburg, Pa.

Cleveland.

June business is keeping up remarkably well; stock of all kinds is plentiful and sells at lower prices, while the variety is all that can be desired. Peonies are the flower just now, the warm spell bringing them in by the thousands. Carnations are beginning to show the effects of the warm weather. Sweet peas are overplentiful. Roses are showing the effects also, but have so far kept up remarkably well. Ferns have been a little scarce the past week. Asparagus is more plentiful. Smilax is a little short of the demand. Kaiserin rose is coming in in good shape and is very plentiful.

NOTES.

L. L. Lamborn, of the Lamborn Floral Co., Alliance, and his wife, each suffered the loss of a parent the past week. Mr. Lamborn, through the death of his father, Dr. Levi L. Lamborn,

Cincinnati.

## MARKET OVERSTOCKED.

The less said about business the better. Stock of all kinds is pouring into the market and it is an utter impossibility to move one-half received. Roses and carnations are beginning to show the effects of the hot weather and lilies and sweet peas are about the only flowers of quality arriving. Some extra fine valley from George & Allan's greenhouses is to be had and the sweet peas from Geo. Corbett are also worthy of mention. Green goods of all descriptions are in quantity but not one-half the quantity arriving finds a market.

## NOTES.

The next meeting and election of officers of the Florists' Society will be held at Gus Adrian's place on Monday afternoon, July 11, at 3 o'clock. After the meeting we will be the guests of Gus Adrian and wife and this is enough to convince the members that an enjoyable time is in store for them.

Alfred Murphy has his new 200-foot house finished and is planting the same to carnations. He will plant the carnations in solid beds as he is under the impression that the crops will hold out longer in solid beds than on benches.

Myer Heller of New Castle, Ind., was a caller this week and says he is well satisfied with the way the Beauties behaved this winter and intends devoting more space than ever to this rose the coming season.

Miss White of Anderson & White, Lexington, Ky., was in the city last week looking up material for a new conservatory which the firm contemplates erecting in the near future.

Albert McCullough, president of the J. M. McCullough's Sons Co., is attending the seedsmen's convention at Atlantic City this week.

J. T. Herdegen of Aurora, Ind., must be pretty busy these days as he is a heavy buyer in this market.

Visitors: M. Poole of Poole & Purlant, Bellefontaine; C. W. Johnson of Chillicothe; J. Rose of the Sefton Mfg. Co., Chicago.

# Seventeen Years' Experience Back of Our Methods of Palm Growing

Seventeen years and every year we have learned something new! Then it was only a small feature of our business; now we have several large houses devoted to Palms alone, in all stages from the little seedling plant to stately specimens in large tubs, such as we show here. Our men, some of whom have literally "grown up with the business," are real palm experts.

Such palms as we grow **must** be better than ordinary imported stuff, and they **are**, as any number of our customers will gladly testify. Ours are clean, vigorous, healthy, acclimated; you can depend on them to give satisfaction, to please your trade, to bring you **more business**. And yet, as you'll see, our prices are no higher than you'd pay for the ordinary imported stock.

Let "Heacock Quality" guide you in placing your next order—we will give you the benefit of the choicest selections from this splendid stock, and can make shipments promptly.

"When in Philadelphia be sure to look us up."

**JOSEPH HEACOCK COMPANY, Wyncote, Pa.**

6-in. pots, nicely characterized..... 1 50

## Chicago Notes.

Vaughan & Sperry say the demand from out-of-town points keeps up remarkably well. Good stock is being shown in all varieties, particularly roses, gladioli and all kinds of greens, including good Mexican ivy. Conscious of a good season's business well done, Lloyd Vaughan is beginning to lean back in his chair, to have visions of the Wisconsin lakes and big muskellunge, and to beam benevolently upon and all and sundry. He leaves for Woodruff, Wis., about July 1, and if the muskies don't bite there he will go further on, putting in about a month. Mrs. Vaughan will accompany him.

The Western Union Telegraph Co. is canvassing the wholesalers with a view to finding out their opinions as to the return of messages delivered when the stores are closed, after noon of Sundays and holidays. It would certainly be a great advantage to those sending these messages to know that the firms they were intended for were not doing business. Some simple form should easily be arranged whereby this could be done with little expense either to sender or receiver.

John Sinner, of Sinner Bros., says field daisies are good sellers these days. He took an order recently for 30,000 and daily sells large numbers. The earlier planted roses look fine at the greenhouses and they are now busy with the later plantings.

John Mangel has a cool looking attractive window with miniature pond and water lilies in which a number of little ducks are having a great time. Crowds of people surround the window daily.

Richmond and Beauty roses and good flowers of *Cattleya gigas* are the

principal showings at Geo. Reinberg's this week.

C. W. McKellar reports sales on orchids as keeping well up and he is handling a fine line of *Cattleya gigas*.

Visitors: T. B. West, Perry, O.; W. F. Duntzman, Bensenville; Wm. Swinbank; Sycamore; J. Y. Lambert, of the Savanna Floral Co., Savanna; Wm. Terrell, of the Lake View Greenhouses, Warsaw, Ind.

## Detroit.

### A GLUT OF STOCK.

The most deplorable condition of the flower market ever witnessed in this city distressed all in the trade during the whole of the past week. The regular retailers with special low-priced sales, the department stores, sidewalk vendors, grocers and others were enlisted in the frantic efforts to reduce the enormous stock which kept coming in increasing quantities as the days passed. Peonies, many of them elegant, but others too soft and open, aggravated the situation, which was bad enough, with the influx of thousands of carnations, roses and sweet peas many times in excess of the possible demands at this season of the year. Among the retailers were found sales about equal to the same period a year ago, but the total was so much less than the enormous supply that comparison was both difficult and disagreeable. Owing to the intense heat much of the stock shipped in was barely worth the express charges, even under normal conditions, and great will be the disappointment to many of the growers when returns are made on such stock.

Robt. Watson is tearing down four houses and will rebuild into three

# Asparagus Sprengeri

## CHRYSANTHEMUMS

Good transplanted cuttings, ready for benching. Opah, Oct. Frost, Glory Pacific, Monrovia, Touset, Ivory, P. Ivory, White Bonaffon, Clay Frick, J. Nonin.

\$1.25 per 100; \$10.00 per 1000.

**D. H. GREEN,** West Grove, Pa.

Kansas City.

PLENTY OF POOR STOCK.

The heavy rains have let up and summer weather has set in, bringing out quantities of stock. Although there are plenty of roses, the quality has been very poor and a great percentage of the stock has been thrown away. Kaiserin and Carnot have held up fairly well, but Bride and Bridesmaid have been very poor—there being very few real good flowers. Beauties have been in excellent demand with too few to supply it, but Minnehaha, which is arriving in numbers, very readily takes the place of the popular favorite. The outdoor sweet peas are of exceptionally fine stem and color, which makes the sales of them very fast. Valley is only medium, as are also irises and gladioli. Carnations are holding out much better than is usually the case at this time of the year. Prices have held well—the select stock bringing easily \$3 per 100. Green goods, such as Asparagus plumosus, A. Sprengeri and smilax, have been plentiful and in good demand. The new crop of ferns has arrived from the north and is in excellent condition.

NOTES.

Miss Hattie Jewell says that her recent move to larger quarters has been a great benefit to her business, which has been rapidly growing the past few months.

Jas. Popodukas left last Friday for Greece. He will return early next fall with his bride. His brother, George, is now in charge of his establishment.

M. F. Parker, president of the Geo. M. Kellogg Flower & Plant Co.,

## ORCHIDS...

Largest Importers, Exporters, Growers, and Hybridists in the World.

**SANDER, St. Albans, Eng.**

On July 1 our NEW YORK OFFICE will be transferred to 258 Broadway, Room 721. T. MELLSTROM, Agent.

Pleasant Hill, was in the city last week buying supplies for the green-houses.

We understand that Ed. Humfeld as extended his lease for another year and will therefore put off the erection of his conservatory until next season.

Fred Fromhold, manager of the W. L. Rock Flower Co., has been absent the past week on account of sickness.

Mrs. T. Mosley reports that June business has eclipsed previous years by a large margin.

Arthur Zirkman was calling on the trade last week with an excellent line of supplies.

MISSOURI.

## Orchids..

We have changed our domicile from Secaucus, N. J., to Mamaroneck, N. Y. We are largest collectors and importers of Orchids and are now booking orders for all the commercial Cattleyas for delivery next spring.

**GARRILLO & BALDWIN, Mamaroneck, N. Y.**

JUNE FLOWER SHOW.

The annual rose and strawberry exhibition of the Horticultural Society was held in the Lyceum June 14. The exhibition was the finest the society has ever held. On account of the unusual amount of wet weather, there was available a remarkably fine lot of roses, fruits and vegetables. Frau Karl Druschki rose was in elegant shape. F. R. Pierson Co. made a very fine exhibit, consisting of palms, peonies, climbing roses and sprays of mountain laurel. Scott Bros. had a good exhibit of peonies and roses. Miss Blanche Potter and Mrs. J. B. Trevor had fine exhibits of sweet peas. A cultural certificate was awarded Mrs. J. B. Trevor (Howard Nichols, gardener) for a very fine plate of Sharpless strawberries. A certificate of merit was also awarded Mrs. Trevor for a new seedling climbing rose, *Glen View*. A certificate of merit was awarded the park department of White Plains for a collection of rugosa roses. A certificate of merit was awarded H. Darlington for *Chrysanthemum Pride of Seven Oaks*. A variegated rose, exhibited by Miss Blanche Potter, attracted considerable attention. Ferdinand Hermann received honorable mention for an exhibit of flowers of *Magnolia macrophylla*, roses, etc. Joseph Eastman received honorable mention for an exhibit of campanulas, and Richard Livingston for a plate of cherries. The other awards were as follows:

Collection of flowers cut from hardy perennials.—Miss Blanche Potter (Geo. Wittlinger, gardener), E. H. Weatherbee (Frank Milne, gardener), special prize.

Vase of 25 blooms of hybrid perpetual roses, assorted.—Gen. E. A. McAlpin (John Woodcock, gardener).

Collection of outdoor roses.—Gen. E. A. McAlpin; Mrs. Hicks Arnold (Wm. Grierson, gardener), special prize.

Six varieties of outdoor roses, six each.—Gen. E. A. McAlpin.

Three varieties of outdoor roses, six each.—Mrs. J. B. Trevor.

Twelve outdoor roses, any one variety.—Mrs. Henry Siegel (Thomas Aitchison, gardener).

Single vase of roses.—H. Darlington (F. W. Popp, gardener).

Display of outdoor climbing roses.—Mrs. J. B. Trevor.

Twelve roses, Frau Karl Druschki.—Mrs. Henry Siegel.

# Vaporite Kills

Wireworms, Cutworms, Leatherjacket Grubs, Eelworms, Centipedes, Millipedes, Sowbugs, Beetles, Ants (including White and "Argentine"), Slugs, Bollworm, Thrips, Aphis, and all  
**Other Insects in the soil;**

and is absolutely harmless to plant life  
and the soil if directions are followed.

VAPORITE is a gray, non-poisonous powder, which, when it is mixed with the moist soil, gives off a vapor which percolates into every crevice and is

**POSITIVE DEATH TO ALL INSECTS**

**One Pound Package, \$ .25**

**Five Pound Package, \$1.00**

Prices for Larger Quantities on application.

We have hundreds of testimonials from Great Britain and other foreign countries where

**Vaporite Has Been Used with Great Success**

but the following ones are from parties of high esteem in the greenhouse and nursery business in this section :

San Jose, Calif., June 4, 1910.

VAPORITE SALES CO.,

San Jose, Calif.:

GENTLEMEN:—Enclosed please find order for 500 lbs. VAPORITE.

In regard to your request for testimonial, would say, that I have used VAPORITE as per your directions, and have had excellent success in killing Mealy Bug, Sowbugs, Root Aphis, Argentine and white Ants, and am sure that if your directions are followed there will be no damage to plant life.

Kindly hurry delivery on order, as I wish to use the VAPORITE when putting out new beds. Respectfully yours,  
(Signed) G. A. LEHMANN.

San Jose, Calif., June 4, 1910.

VAPORITE SALES CO.,

San Jose, Calif.:

GENTLEMEN:—After thoroughly experimenting with your VAPORITE, I find that its effects are very successful in killing all insects in the ground, and if used properly there will be no danger at all to plants.

I intend using it this fall on all beds in my hot houses.

Respectfully yours,  
(Signed) E. H. BOURGIGNON.

San Jose, Calif., June 6, 1910.

VAPORITE SALES CO.,

San Jose, Calif.:

GENTLEMEN:—We have used VAPORITE and find it most satisfactory for all insects. I will say further that this is the first year that we have been able to raise our young China Aster plants on account of slugs.

We mix VAPORITE with the soil, as per directions, before planting, and if necessary after, and the slugs will not bother.

We also intend using it in the carnation beds for mealy bug, ants and other insects.

SAN JOSE FLORIST  
A. & E. SCHLAUDT.  
(Signed) PER C. E. SCHLAUDT.

San Jose, Calif., June 10, 1910.

VAPORITE SALES CO.,

San Jose, Calif.:

GENTLEMEN:—I have used the sample of VAPORITE left here by your agent and consider it very valuable to anyone in the nursery business. It does the work thoroughly.

Please ship me 200 lbs. at your earliest convenience.

Truly yours,  
(Signed) ARTHUR CANN.

**VAPORITE SALES CO., San Jose, California**

**H**OLYOKE College was among the first of the leading educational institutions to have its own greenhouses for experimental and student work.

This view of the range, unfortunately, shuts out the left wing and the laboratory building at the end of the right one. Professor Kinney conducts his entire class work here, and the students each put theories into practice by actual growing experiments and demonstration. The houses are our complete Iron Frame Construction, which makes the ideal one where attractiveness, lightness and durability count. Send for circular.

Business for the past week has been about as good as can be expected for this time of year. The plant trade, however, still hangs on. All are busy at present getting ready for planting roses, carnations and chrysanthemums. Real summer weather is here at last and the thermometer registered 90° in the shade here last Saturday. Roses are not so plentiful as they have been. Carnations are good and plentiful for the time of year and find a ready sale. Sweet peas are becoming more plentiful and they have a good demand. Peonies have played out for this year. Stocks and other short flowers are scarce. Lily of the valley is not much called for at present. Some is being used in wedding bouquets. Some few lilies are coming in and they meet with ready sales. Green goods are becoming more plentiful and the demand is good.

**NOTES.**

The boys at the J. A. Keller Estate on East Sixth street have finished planting one house of carnations and are getting the other houses ready for planting. All the carnations are planted from pots at this place and approximately 20,000 will be planted this year; 5,000 chrysanthemums will also be planted as soon as the houses are ready. Everything is in first-class condition at this place. James Peter Keller, manager at the down-town store on Main street, reports business as good and says he has been cleaning everything out well this spring. Not a flower has been wasted, he says, and at times he had to buy elsewhere.

H. F. Hillenmeyer, the nurseryman at Sandersville, lost a three-story warehouse on his farm recently by fire. The loss was estimated at about \$2,500 on

## Steel Return Tubular Boilers

The Most Economical Type of Boiler for Greenhouse Heating. Highly recommended by well-known florists.

**JOHNSTON HEATING CO., 138 E. 31st St., NEW YORK.**

New Rochelle, N. Y.

The florists of this vicinity are just now nearing the close of a busy season's work. Bedding out is nearly done and the houses are looking lonesome. Not for long, however. Already signs of the fall and winter campaign are visible. At the Patterson place where Fred Michel is in charge, the houses are being cleared for chrysanthemums. Thousands of them are in sight and Fred says he will outdo even last year's fine crop. To your correspondent's eyes, however, the fairest flower there was the charming young lady propagator. As he watched the cuttings slip from her nimble fingers, his thought was "What a prize for a struggling young florist!" At the store on Main street where Miss Patterson presides, a very satisfactory season is reported, and much funeral work.

At Birmingham's on Weyman avenue and Penndorf's on Oak street, everything was sold clean and quite some stock bought to fill out orders. At Louis Eppe's in Pelham, quite a lot of bedding plants, mostly geraniums and coleus, were disposed of. Smilax and asparagus are his all-the-year crops but a large quantity of bulbs, mostly narcissus, is handled. Mr. Eppe is a stalwart son of Helvetia, where they bow to no man's hat, and he is certainly a hustler. During the past winter he forced 100,000 narcissi after 1,500 chrysanthemums, then followed the bedding stock. The only help hired was a boy occasionally for a day or two. It is only fair to add that in all this work in his six houses he was ably assisted by the partner of his home, a daughter of sunny France. He is going to enlarge his plant and add 30,000 more bulbs and 1,500 callas with the same help—an object lesson for some of us slow ones.

## The Superior Standard

RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
 $\frac{2}{3}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market  
MADE IN NINE (9) SIZES FOR HOT WATER.

Send for catalogue and list of growers that are using this boiler.

## The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

### Heating Information Wanted.

ED. AMERICAN FLORIST:—

I would like information regarding heating of a house 16x30 feet, and I intend adding another the same size soon. The house runs east and west, has 3-foot glass on north and south sides, east end glass and west end, where I expect to put in heating apparatus, is double sheeting and siding walls five feet to eaves. I have had no experience in putting in heating system, and as my means are limited I want as cheap and durable a one as possible. I am carrying an assorted, general stock, have benches on north and south walls and one in center of house. The average low winter temperature is 14° to 16° above zero. Would also like to know if the so-called self-feeding furnaces or heaters are satisfactory.

Texas.

M.

To heat a house 16x30 feet with three feet of glass in each of the side walls will require from 150 to 200 square feet of radiating surface, according to the temperature desired. I would suggest that one of the houses be piped for a temperature of 50°, which will require but 150 square feet, while 175 to 200 square feet should be used in the other house. The simplest method of piping these houses is to start at the boiler with a 3-inch flow

## The "Meyer Green Silkline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also Violet Thread for tying up Violets. Price of both, \$1.25 per lb.

For sale by all first-class supply houses. If your dealer does not carry it in stock, write us direct, giving us his name.

JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs. Ask your dealer about our Extension Hose, Extension Rods, and the Mastin Whitewash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

J. G. MASTIN & CO., 3124 West Lake St., CHICAGO, ILL.

## Cattle Manure in Bags Shredded or Pulverized

Pure—dry—uniform and reliable. The best of all manures for the greenhouse. Florists all over the country are using it instead of rough manure.

### Pulverized Sheep Manure

Absolutely the best Sheep Manure on the market. Pure manure and nothing else. The best fertilizer for carnations and for liquid top-dressing. Unequalled for all field use. Write for circulars and prices.

The Pulverized Manure Company  
32 Union Stock Yards, Chicago.

pipe and run it up vertically to a point about one foot lower than the bottom of the ridge. Then put on an elbow with a one-inch opening on top, from which a pipe should lead to the expansion tank, which should, if possible, be located several feet above the elbow.

The flow pipe should then run with a fall of one inch in 10 feet to a point near the end of the houses, where a 2½x3-inch tee should be put on, from which a 2½-inch flow pipe should lead to each of the houses. The flow pipe should be below the ridge and should connect at the farther end of the house with from seven to nine 2-inch returns. It will be a good plan to have two coils of two or three pipes each on the walls and the others under the center bench. Care should be taken to give all of the pipes a slight fall so that the air cannot pocket. If this is done and the pipes are arranged as suggested there will be no occasion for air valves. While a magazine heater would give good results, there is no occasion for using one, as the standard hot water heaters would keep up a steady heat for nine hours.

L. R. T.

Has stood the test of over a Quarter of a Century.

Ask the man who has tried them. For further particulars, write to

**GEO. M. GARLAND CO.,**

DES PLAINES, ILL.

Seattle.

A small amount of funeral work, graduation flowers and the usual June weddings have made up the business so far this month. The beginning of the excursion trips to Alaska calls for some flowers to be delivered to the various excursion boats. Outside of these items business is slow. Stock at the present is good and with the possible exception of valley is in good quantities. Carnations are plentiful and most of the stores have a special card in the window.

### NOTES.

Most of the florists of the city were in attendance at the rose festival at Portland from June 6 to 11, and in most instances pronounced it a success.

The Hollywood Gardens had two large wedding decorations on June 16 and 18.

PIERSON

U-BAR CO.

DESIGNERS AND BUILDERS

1 MADISON AVE. NEW YORK

## High Quality Not High Prices

Whenever we make a piece of material it is our aim to turn out the very best that can be produced; high quality is our object for nothing else will satisfy the man who wants to build a greenhouse and make a success. There can be no success without this striving after quality; without there be an effort to produce something better than was produced before. The man who believes in selling poor stock, low class goods, and gets what he can for his work, never progresses or succeeds permanently. We are working hard to make our construction more modern, to improve our patterns and our methods of manufacture, we must keep up with the times and stand at the head of the procession or drop out of the line. Prices are to be considered of course, in everything, but it's quality that counts after all. You forget the price but you don't forget the quality—

It's not what you pay but what you get for what you pay—that is economy.

Nut Notes.

We have been importing millions of  
dollars worth of nuts and nut prod-  
ucts every year, but this country has  
now established at Cornell Univer-  
sity, perhaps the first course in nut  
culture in the world, and it is prob-  
able that the "millions of dollars  
worth" will soon figure on the export  
side instead of the import side. For  
the course in nuciculture at Cornell,  
there is an annual prize of \$25 for the  
best grafter.

Throughout the center of France,  
from the Bay of Biscay to Switzer-  
land, there are large plantations of  
chestnut trees. The nuts are large  
and during the fall and winter the  
poor often make two meals a day on  
steamed chestnuts, eaten with salt or  
milk. Physicians say they are whole-  
some, healthy, nutritious and fatten-  
ing.

## Garman's Antipest

INSECTICIDE AND FUNGICIDE

For the Garden, Orchard and Greenhouse

Non-poisonous and harmless  
to vegetation.

Kills Green Fly, Aphides, Bark Lice,  
Thrips Mealy Bug, Red Spider,  
Scale, Wire Worms, Ants  
and Slugs.

This is the grower's Friend. Handy to  
use, cheap and effective, mixes readily in  
water. Destroys all insect pests and  
keeps down filth. Circulars on appli-  
cation. \$1.50 per gallon. Also in  
quarts, half gallons and in bulk.

**PERFECTION CHEMICAL CO.,**

## HALF HOUR CHAPTERS FOR FLOWER GROWERS

### Freelias.

The first freesia bulbs are due now at any time and the sooner they are procured and potted or flatted the better. Freelias, more perhaps than any other bulbs, are impatient of forcing and if they are wanted early the bulbs must be well established before going into the greenhouse. The largest bulbs should be spaced about two inches apart and planted so the point of the bulbs just peep out of the soil. Give one good watering to settle the soil around the bulbs and place them in a cool shed or a shady position outdoors to root. After from three to five weeks of this treatment they may be placed under glass to start. Old bulbs that were left over from last season should be well ripened by now but if not place them for a little longer on a shelf in the full sun and when well hardened up pot and treat as advised for the new bulbs. Although there is not a great variety in the freesias grown in this country some are much better than others and the now well known Purity is a case in point.

### Peonies.

The failure of the peonies in some localities, owing to the freeze this spring, will not probably make much difference to the planting this fall. Peonies are not like some plants that have to be propagated annually. They take at least two years before the plants are at their best after planting, consequently the amount of flowers on the market year by year does not vary so much as those of some other kinds. But, with a view of subsequent plantings, it is well to take a few notes of those varieties that have come through the severe ordeal of the present season and yet given a good account of themselves. These, it is pretty safe to assume, would be the best to plant. Here the standard white, Festiva Maxima, was badly hit and while by no means condemning this fine variety, its tenderness of growth will be a mark against it. Mme. de

Verneville has been fine this time and the flowers have sold remarkably well. Jeanne d' Arc has also proved its worth and while neither can quite take the place of Festiva Maxima they have been extremely useful. The plants have made a very fair growth this year and there is every probability that they will finish up fine flowering crowns for next season. Free mulching with good manure is very helpful to old clumps now, also watering with manure water if this is available, all helping round out a good season's growth, which by its decay in fall will materially strengthen the buds for next year.

### Chrysanthemums.

Plants benched in May are growing strongly and some already have reached the first break as the appearance of the flower bud in the top of the growth is termed by growers. As a rule there are from two to five young growths springing from the leaf axils just below these buds and it becomes necessary to select one of these to carry on the plant's growth. We never choose the first one as that is almost invariably weaker than the second and third. Below these latter we do not go as shoots taken lower than this lead to crooked stems. The second for single stemmed plants and the second and third for twin-stemmed ones are, all things considered, the best. Some varieties are troublesome from this time on by throwing flower buds every couple of weeks or so. Except in the case of the varieties that are needed in flower extremely early the buds must be rubbed out on sight and the same process repeated with regard to the growths. Considerable care is still necessary with the watering and it is just as well to retain some part of the soil as dry as possible, watering around the plants only. This will give new soil for the roots at the time the buds are forming and prevents the yellowing sometimes seen in late summer when the soil is sodden. Green fly will probably continue troublesome and spray-

ing with nicotine preparations or fumigating should be kept up regularly until all are destroyed. The spraying is usually more effective and less likely to injure the plants than fumigating at this time, when it is difficult to get the temperature below 60° at night. Weeds will still be a trouble in the newly planted beds and must be kept under constantly both for the sake of tidiness and because of the insects that nearly always infest them. Many growers start in to feed at this early date, apparently under the impression that liquid manure can never do harm, but it is, to say the least, unnecessary and may prove harmful. Let the roots become well established and with a good hold on the soil before feeding.

#### Shading.

The extreme heat and bright sun of the ordinary American summer always proves too much for the color of outdoor flowers and some arrangement for shading has to be made if the flowers are to be produced at their best. Not only is this beneficial to the flowers but, in the majority of instances, the plants too will make a cleaner, better growth than when exposed all summer long to the burning rays of the sun. Some flowers, of course, stand sun much better than others. The yellow composites, natives of our prairies, are able to put up with a degree of sun heat that would be absolutely fatal to some of the European and alpine plants generally. Gaillardias like sun but even with them light shade is a great advantage while trolleuses, pyrethrus, gladioli and even delphiniums are all better for shading. A few rolls of common muslin do not cost much and if carefully used will last two or three seasons.

## THE RETAIL TRADE

### Wreath With Boxwood Foundation.

SEE SUPPLEMENT WITH THIS ISSUE.

Good, fresh boxwood, well arranged in a wreath, cross or other device, is always attractive, the deep, shining green serving admirably as a background for almost every class of flower. But too often we see boxwood so tightly and closely packed that it looks stiff and unnatural. A few sprays should be allowed to escape from the wreath and stand out to break up the outline and lighten the effect and this can be done without making it look rough or uneven. White, red or pink carnations have an excellent effect over boxwood, especially lightened with lily of the valley, Roman hyacinths or some other small flower. In the fall chrysanthemums again are elegant in a wreath of boxwood while dahlias, gladioli, or, in fact, almost any class of cut flowers do well if artistically arranged. Boxwood serves admirably as a setting for large, bold designs for funerals in conjunction with croton leaves or other colored foliage, indeed there is hardly any class of cut flowers or greens that do not harmonize well with this hardy, long lasting and effective foliage.

### Some Timely Window Suggestions.

#### BUCKETS AND WELL.

A pretty window display is suggested in the imitation of two large well buckets made of lacquered wood or porcelain. These should always be used in pairs suspended by a rope over pulleys which should be covered with ivy branches. Use growing rhododendrons to fill the buckets. In this case

it is advisable to use a blue porcelain bucket, as this will harmonize with the rhododendrons—using moss with it to take away from the set effect of the flowers. Old tree stumps can be used to good advantage to imitate the well below, partially covering it with green and the brown Southern moss. The floor of the window should be covered with a soft green moss or natural grass, if possible. Tall boxwood trees in the background grouped with potted rhododendrons finished at the edge with a triple row of low, hardy ferns and with the southern moss make an artistic whole and give it completeness.

#### THE SCALE WINDOW.

This is made of a rough bough for the center balance—propped up on a mound of scarlet geraniums. At either end of this rustic bough attach a flat basket of good size. Fill each basket with the double white geranium, selecting a low-growing variety; finish the edge with southern moss to cover up pots and basket. Take white gravel for the floor of the window. Laurel, or any kind of pretty shrubbery can be used for the background, mounding a small pyramid of red geraniums in either corner. For finish of the foreground use a double row of bachelor buttons close to the window.

#### LIBERTY BELL WINDOW FOR THE FOURTH.

Take a large sized wire frame, the size of the original Liberty bell, and cover it with moss. Make the bell of yellow pansies or even the common buttercup; both are effective, but the pansy gives the suggestion of "the thought." Place the bell suspended from a rustic beam set on two rustic stumps and at the base of the rustic

HUGH SEALES, BIRMINGHAM, ALA., AND SOME OF HIS HIGH GRADE WORK.

BOXWOOD WREATH WITH CARNATIONS AND LILY OF THE VALLEY.

COMET WINDOW OF W. J. PALMER &amp; SON, BUFFALO, N. Y.

stumps place alternately red and white geraniums and lobelias for a red, white and blue effect. Place a mirror below for a reflection and finish with some moss of the southern variety. Blue hydrangeas should be used for the background on either side in groups, and between these groups suspend a large silk American flag.

#### AN AUTOMOBILE WINDOW.

Have a wire frame made to resemble an automobile. Do not moss it too thickly. For the body use scarlet geraniums, for the wheels scarlet geraniums, using the single flower; make the axle of some yellow flower. Also make the front extension of geraniums in a flat mass of the single flower. For the canopy use ivy or galax leaves, with sprays of ivy leaves to wind around the canopy supports. For the dashboard and wind guard use ivy with an edge of some yellow flower—using this combination for the miniature lamps. Bank handsome tall palms in the center of background with smaller groups in either corner. Cover the floor of the window with sand or fine gravel and a wide border of grass—using very small ferns, etc., to finish where necessary.

MIDDLEPORT, N. Y.—J. G. Gould and M. Spangenberg have interests in common in the Wholesale Cut Flower Co., of 495 Washington street, Buffalo, and Mr. Spangenberg and wife have moved to the latter city.

## FLORISTS' PALMS.

### Fighting Insect Pests.

As the weather grows warmer there is likely to be a fresh outbreak of insects in the palm house, for, even though the plants have been carefully cleaned before repotting, there are sure to be some of these pests that have been passed over, and few of them are needed in order to re-colonize the house. The various preparations for spraying and dipping have different degrees of value as insecticides, some being efficacious against some insects only, while others will endure more insecticide than the plants are able to stand. Speaking in a general way, the various oily preparations must be used cautiously on foliage plants, for while the mature leaves may be able to stand a given strength of the insecticide, the young leaves that are just unfolding will not bear nearly so much, the consequence being that the plants are subject to injury in the part that shows the most. Even too much soap allowed to soak down in the heart of a young palm will frequently rot off the center leaf. But used carefully, the sulpho-tobacco soaps have much value as a dip, and will go a long way toward keeping a house of palms in a clean condition, always provided that the treatment is commenced before the plants get badly infested, and is

continued afterward at regular intervals. Prompt treatment before the insects get control is the proper method, and will do away with a lot of scrubbing and cleaning, to say nothing of avoiding a lot of injury to the foliage.

An aphid that varies in color according to the plant upon which it feeds, being sometimes gray or slate-colored and sometimes nearly black, is frequently found upon the young and unexpanded leaves of the palms during the spring and summer months, and not only weakens and discolors the foliage, but also makes it very dirty. This insect is readily disposed of by means of fumigating with nicotine paper, or by spraying with nicotine solution, the fumigation being the easiest method from the fact that the smoke will reach all around the growth, while the spraying may only strike one side of a leaf. Yellow thrips is another warm weather pest that is liable to do much harm to arecas and kentias in particular, though not confining its attacks to those palms. This insect may also be destroyed by fumigating or spraying, or by both combined, the fumigating being more effective if the foliage of the plants and the atmosphere of the house is moist at the time of the application. Thorough syringing will do much to prevent attacks of red spider on the palms, but during the winter latanias are quite likely to develop

colonies of this troublesome pest, and a soap dip will do much toward overcoming them. In the hot weather arecas are sometimes attacked by red spider, and in this case the insects are more likely to be found on the upper surface of the leaflets than on the lower side, and where any leaflets are noticed with the edges turning up instead of down, it is well to examine them for red spider, the punctures of the insect having the effect of contracting the surface of the leaf to such a degree that the edges of the leaflet turn up from their normal position. With proper syringing there is seldom much trouble from mealy bug on palms, but still there are cases in which this insect has given much trouble, for it breeds with great rapidity, particularly in May and August. Sulpho-tobacco soap and nicotine solutions are both effective against this insect, and when used faithfully will soon prevail.

The many varieties of scale are the greatest insect enemies the palm grower has to contend with, and the only way to keep them down is to fight them continuously from their first arrival, knowing that the young scale are easily killed before they form their hard covering, while it needs a strong preparation to penetrate the covering of the mature insect. The present season has again demonstrated the wisdom of keeping fires late in the year, or rather the poor economy of letting the fires out too soon, for the nights have been so cool that newly potted stock would suffer without some artificial heat. In the latitude of New York it is seldom that one can be safe without a little fire heat in the palm houses until at least June 1, and frequently it proves better to continue it until June 15, in order to give the stock a good start. Some warmth in the pipes and a crack of air on the ventilators will provide a much better growing atmosphere for palms than will be found in a closed house, with no fire heat. Water carefully, but thoroughly, for a newly potted plant that has not been watered through to the bottom will not make a satisfactory start—indeed it cannot while suffering from thirst.

W. H. TAPLIN.

## WITH THE GROWERS

John Welsh Young, Philadelphia.

Being anxious to see the home of the roses that brought honor and first prizes to that painstaking grower, John Welsh Young, of Germantown and Roslyn Heights, I accepted the invitation and journeyed out to his new establishment at Roslyn Heights. This admirable situation is but a few minutes' auto ride from Wyndmoor, where John Burton and his two sons' separate establishments, and Myers & Samtman raise their famous roses. Or in another direction not much further away is Hillside, with Farenwald, T. Towill and Victor Groshens. The Jos. Heacock Co. at Wyncote is also within the circle, all of which are names to be reckoned with, either in the cut flower market or on the exhibition table. It may be the air or

the water or the soil, but there is a something in the atmosphere of these Montgomery county hills which, combined with the skill of the growers, gives such good results.

Mr. Young's greenhouses are five minutes' walk from the station. To me they look like the first installment of a great establishment. There are two houses, 35 x 300 feet. These, of King Construction, are models of the builder's art, being perfect in every respect, affording the maximum amount of sunlight. Continuous ventilation on both sides at the ridge allows air to be given at any time required. The apparatus for regulating this is the quickest acting I have seen. The heating system is somewhat different from that most used by growers in this section. Two new 85-h.p. return tubular connected boilers set on the surface of the ground, furnish steam under a 40-pound pressure; this is delivered to the greenhouses through reducing valves at an 8-pound pressure. With this reserve power there is never any trouble about getting all the heat required to all parts of the system. The condenser steam or water is pumped back into the boiler. The problem of water was a serious one, although a stream passes through the property, but Mr. Young, having known of long dry spells, safeguarded himself with an artesian well, which had to be drilled down 277 feet before satisfactory results were obtained. Water now rises to within 27 feet of the top. This is pumped into an iron tank of 2,000 gallons capacity, the pressure gage on top showing 40 pounds. This force allows for considerable use, but when any general watering of the houses takes place a Dean force pump is run by steam from the boilers, keeping up the pressure in the tank. A small steam boiler, for pump power, is installed for use in summer when the fires in the large boilers are withdrawn. This water system costs in interest, charges and coal about \$70 per year, a not excessive amount compared with measured and city systems.

The roses grown are Killarney, My Maryland, Richmond, American Beauty and White Killarney. My Maryland was more prolific than Killarney, about as 8 to 10. White Killarney was most satisfactory, doing quite as well as the pink variety; while in the early fall and late spring the color was not pure, yet it was at all times a good seller. Pinching is resorted to to get long stems, for, as Mr. Young says, "We aim to get as many of the best as we can, for we are sure to have plenty of the lower grades." The plants were all in ground beds, which had been made without drainage of any kind. A 6-inch cypress board around the borders keeps the soil in place.

In one house, My Maryland, Richmond and Beauty were growing in sections or blocks, without divisions, and all seemed as vigorous and strong as could be wished. The other house was planted entirely to Killarney. The tea roses will all be kept in for another season, being given a rest of three weeks about the latter part of June or early July. Mr. Young has also erected a commodious dwelling for his superintendent, Clarence Upton, who, by the way, is a very efficient man and takes great interest and pride in the products of the place. A contemplated improvement is an ice house or cooling system for keeping flowers, which for the present are all sent to the Germantown branch of the business at the end of each day. Taken altogether this is a very interesting place to visit, the high class of the stock produced and the various economic methods in producing it being worthy the study of other growers.

SALT LAKE CITY, UTAH.—Sidney R. Lambourne was assaulted by a conductor on a Fourth street car June 18. Mr. Lambourne rang the signal bell to stop several times and eventually spoke to the conductor who struck him.

INTERIOR OF THE STORE OF C. R. JAEGER, SEVENTH AVE., NEW YORK.

CYMBIDIUM LOWIANUM.

## ORCHID NOTES.

FUMIGATE twice every week if there is any suspicion of cattleya fly.

GROW *Cattleya Mossiæ* on now strongly in order to finish up good growths by fall.

REPOT *Cattleya gigas* directly after flowering and before the new roots start at the base of the pseudobulbs.

*CATTELEYA SUPERBA* and *Epidendrum bicornutum* require more sun and heat during the growing season than any others in these genera.

DON'T mind leaving the orchid house door open sometimes. The orchids will not run away and a little fresh air is of great benefit.

KEEP *Dendrobium Phalænopsis* well up to the light now and it will grow away rapidly and flower freely. Give plenty of atmospheric moisture.

### *Cymbidium Lowianum.*

There are few finer orchids for exhibition purposes than *Cymbidium Lowianum*, a picture of which is given herewith. It is a strong growing, vigorous rooted plant that anyone with a little knowledge of orchid culture can take up with every prospect of success. In the earlier days of orchid culture when it was thought that every orchid, no matter where it came from, had to be grown in a high temperature, *Cymbidium Lowianum*

was not a success and for years afterwards the fact that it came from great elevations on the Khasia hills did not enter into the growers' calculations and they kept it in hot houses, with very little air. Since more natural conditions have been given it, a cool, moist atmosphere and plenty of air at all times, the plant has been a much greater success under cultivation.

Unlike those of most orchids, the roots of *Cymbidium Lowianum* are strong and capable of taking hold of a fairly heavy compost. For this reason we always mix a moderate amount of good fibry loam and a little well dried cow manure with the peat and moss when mixing the compost for strong, healthy plants. Smaller, weak or unhealthy ones are better without it. The reason we use it is not so much because it is absolutely needed by the plants but because it prevents so large a pot being necessary. When these plants are repotted often, the roots having filled the pots, the latter soon get to be of an unwieldy size and awkward to handle and the loam and manure helps to make the food for the roots more concentrated. The flowers of *C. Lowianum* are a long time in forming and coming to perfection, often as much as three months elapsing between the time the spikes show and the time the flowers are fully expanded. They also last a very long time in good condition when open.

### The Evergreen Dendrobiums.

While not so useful for cutting from as the deciduous section of the genus, the evergreen dendrobiums are magnificent plants for a display, either in the conservatory or flowering house or as exhibition specimens. One of the finest of this section is *D. thyrsiflorum*, the subject of the accompanying illustration. It is a tall erect growing plant and the racemes of flowers are tinted white with a yellow center or lip. It is perhaps a little stronger growing but otherwise almost identical in habit with *D. densiflorum*, the flowers of which are deep golden yellow, considerably crowded on the spikes. Other fine yellows in this class are *D. chrysotoxum*, *D. suavisimum* and *D. Farmeri* and they all thrive under similar cultural conditions. While not advising large pots for these beautiful dendrobiums yet the roots are larger than those of the deciduous groups and while the latter never seem happier than when growing over and over each other and fighting for a place in the small pot or basket those of *D. thyrsiflorum* and its allies like a rougher, more open mixture and more of it.

These plants like plenty of heat and moisture during the short time they are making their growth in summer, but when this is complete they do well outside in a position where a little shade can be given during the hottest weather or in a frame with the lights

tilted and also lightly shaded. It is not at all unusual for them to make two sets of growth in a season, but it is not advisable to force them to do this. Just let the plants take their own way and they will be all right. While they take a distinct resting season, these plants do not need such severe drying as the deciduous kinds and it is weakening to them to shrivel up as they will do after flowering unless sufficient moisture is given in winter to keep the stems plump. At this season a temperature of 50° is ample, gradually increasing this and also the water supply as the days lengthen in spring.

## THE CARNATION.

A LITTLE care now of the young stock in the field, with regard to stopping the shoots and removing flower spikes is well repaid by the better quality of the plants later.

NEVER leave the plants on the benches after they are done with as they only spread insects and disease. Take them out and clean, repair and refill the benches ready for planting.

KEEP full air on the houses in which young summer stock is growing and if there are some benches still double planted get the extra plants out and planted in their permanent places without any further delay.

FIELD stock, as far as we have seen, that was planted out before the recent severe weather, does not appear to have suffered much. The plants were checked, it is true, but they are coming away strongly again now and are naturally very hard and vigorous.

### Carnation Buds Damaged.

ED. AMERICAN FLORIST:—

What is the trouble with the enclosed carnation buds and growth?

P. M. L.

The carnation buds are badly infested with red spider and indicate having been burned with some insecticide or by an over abundance of fertilizer.

C. W. JOHNSON.

### Carnations in the South.

Carnations in the field, except in favored sections, are rather undersized on account of the long spring drought which has been general in the south this season. Hardly any of the growers are equipped with efficient means for watering a large patch. Trying to water a large patch of carnations with the hose is very much like Mrs. Partington trying to sweep back the Atlantic ocean with her broom. Wetting a couple of inches of the top soil works more harm than good by inducing the roots to come to the surface and get burned up. A small patch may be watered with the hose but the dose must be a thorough soaking. The best time to do this is in the evening to allow the plants to absorb their fill of moisture. Next day the ground should be worked over in order to conserve the moisture as long as possible. Irrigation is the best method of supplying water and where the ground has a slight fall this is very easily accomplished, especially

where the ridge and furrow system of planting is adopted. Frequent and thorough stirring of the surface soil will generally carry the plants through the longest drought. In the ridge and furrow system the sides of the ridge are barred off with a bull tongue plow and then the soil is replaced by using a sweep up the center of the furrow. The hoe is then used to keep the surface of the ridge from baking.

Topping the plants is most important just now. This part of the work

*Dendrobium Thyrsiflorum.*

should be gone over every week, pinching only the shoots that are long enough. By this method the tendency to crop will be very much lessened. Next month, from the beginning to the end, according to the section of country, will be housing time and every effort must be directed to have the plants in good shape by that date.

WM. LEAR.

### Dahlias for Fall Flowering Inside.

ED. AMERICAN FLORIST:—

I have some cactus dahlias in 6-inch pots in the greenhouse. They are about 18 inches high. What is the proper treatment to have them in flower in the fall, after the outdoor plants are killed?

W. B.

Later plants would probably have been better for this purpose than those described by "W. B.," but if they are to be tried they should be kept as cool as possible and planted out in an open position before they get too much potbound. Keep the flower buds all pinched out until the end of August when the plants must be lifted and planted on the greenhouse benches, leaving full air on the house and spraying the plants several times daily until they recover. We may get killing frosts for dahlias any time after the middle of September, so in order to be sure of a succession the flowers should be allowed to form as

soon as the plants are re-established. Maintain a temperature of 55° at night, and allow plenty of air. We are not recommending the plan as a moneymaking proposition but only as a chance method of using the plants that may turn out profitable.

G.

### The Modern Sweet Pea.

The summons announcing that the sweet pea trials and seedlings at the Morse ranches were in bloom came a week earlier than expected. In this visit I took in those ranches, one at Mt. Eden in Alameda county, and the two large ones at Gilroy. One item of this trip was a splendid automobile ride of 100 miles and I was glad of Mr. Morse's company. Notwithstanding that we have had a seemingly very favorable season for sweet peas they came a little prematurely into bloom, and were correspondingly weaker in growth, so that probably the season's yield will be a little below the average. The trials are nearly all either of the Spencer or Unwin types, and we hardly expect now to see any other among the seedling stock. But a new type is coming in. It is a little early to speak of it, but the new crossings come in such strong form that we are evidently not done with new developments. Beautiful selections are promised. One in particular I can mention—a pink striped on primrose ground which will be called Ethel Roosevelt.

For an American picotee, pink Spencer Dainty will take the place of the others that have been offered under this description, although I have not yet seen John Eckford's Picotee. Looking over such varieties as Audrey Crier, Bobby K., Florence Morse Spencer, Mrs. Hardcastle Sykes and Princess Victoria, they are all practically the same thing. Our only course must be to select one good strain. The name Florence Morse Spencer will be retained. We do want a standard type of this picotee pink edge. Elsie Herbert is very much the same thing as Spencer Dainty.

Very few things that come to us under English names will have trade value for our seed growers. Some respect will be paid to priority of introduction where good standard colors are found among the English novelties. But American crossing is breaking into everything the English specialists have. The second year after the crossings are made there is such a redundancy of variation that a large part of this seedling stock is put right into what is called the Superb Spencer mixed. The American seed grower cannot think of growing under distinct names more than a few of them, especially as the Spencer blood is so hard to reduce to fixity, and yields so small a return of seed. For a practical white Spencer there must be simply a persistent selection for seed stock of whatever takes best size and form, and whether it happened to come in Elta Dyke or Nora Unwin or from new crossing, it will be simply American White Spencer. So of all the standard colors. If there should chance to be any peculiar English quality about them it will not

INTERIOR OF THE LARGE HOUSE AT WM. H. ELLIOTT'S, MADBURY, N. H.

hold here, and will take on the character that results from the California soil and climate. Nothing is lost, and a stronger type is perpetuated.

We went over the same long list of names as last year. Five hundred names can be reduced to 100. Things that show novelty of color often come at first in the old small sized flower, but now each year these colors appear in the American seedlings in better size and form. Four out of every five of the names on the English list can have but the most transient recognition by such growers as Morse and Burpee. I was hoping that this year such scarlets as Queen Alexandra, Scarlet Gem and George Stark would be improved upon by a truer scarlet. A new approach is coming through Cerise Scarlet and another through Orange Scarlet, but we are not quite there yet. In the bright rose, Millie Maslin and Marie Corelli are a decided advance. In pure lavender we do not seem yet to get away from the old hooded form. In either Kitty Clive or Maggie Stark we have a Spencer cerise salmon. The attempt to get a good Spencer with the Blanche Ferry colors has resulted in confusion. It goes under the names of Mrs. A. Ireland, Miller's Wavy Bicolor, Apple Blossom Spencer, and now a selection of it is called Blanche Ferry Spencer.

The English introduction called The King was larger and finer than King Edward VII. Our English friends may be interested to know that Mrs. C. W. Breadmore is a little ahead of Evelyn Hemus. Among the American seedlings this year Pink Friar Spencer appears. It would be difficult to describe some of the rows of seedlings that show the second year's break. For instance, suggestions of lavender from the lightest tinge through quite a scale of shades were noticeable. So also in the variations of salmon or-

Iris Germanica Mme Chereau.

ange, salmon buff and salmon cerise. Some pretty selections will be made from these. In my own planting of the 1910 novelty, W. T. Hutchins, it has broken badly. It makes a good Spencer apricot buff, and when a couple of days old it is a Stella Morse Spencer. I was glad to go over a good many acres of trial rows and seedlings with a grower who makes the most tireless study of them, and who is both an expert and a very practical grower for the trade. I do not see how a more commendable method, or more painstaking labor could be given to this department of seed growing.

W. T. HUTCHINS.

#### German Iris Mme. Chereau.

The pretty variety of German iris figured herewith, Mme. Chereau, is one of the most useful varieties in existence for cutting, and good also for a display on the plants. The flowers are pure white in ground, with markings of a delicate blue and it grows about 30 inches to three feet high. The illustration was prepared from flowers grown by Elmer D. Smith & Co., Adrian, Mich.

#### Growing Ferns Outside.

ED. AMERICAN FLORIST:

Will you kindly let us know the best method of growing nephrolepis and other ferns outside? Would it be best to construct frames and how much shade is required? Could they be grown under laths or must they be placed under glass? Any information regarding this will be greatly appreciated by us.

T.

It is best to grow the ferns in frames, from the fact that they may be kept more under control in stormy weather, for heavy rains will be liable to beat down the foliage if the plants are unprotected. Some shading material is required, but whether sash, muslin or lath shades are used it is better to raise it on a light wooden framework about one foot above the sides of the frame, so that abundant ventilation may be had. For small ferns sash are preferable, on account of the protection from heavy rain, but for nephrolepis of fair size the lath shading would answer very well, and if glass is used it would need a light shading of whitewash or whiting and oil. Plunging the pots in ashes, hops, or sand in the frame is a good practice, as it keeps the roots cool, and prevents the plants from drying out so frequently.

W. H. T.

CHICO, CALIF.—The operations of the local government plant introduction garden will be greatly extended this season, this work having been found a great benefit.

### Roses That Travel Well.

The illustrations herewith show examples of good keeping qualities in roses that are, we think, better than the average. The American Beauties were shipped from the Dale Estate, Brampton, Ont., taken to New York and placed in cold storage on board a steamer bound for England. They were photographed after arrival in London and lasted over a week afterward. The other picture shows an even more remarkable result. The variety is Canadian Queen, a rose, by the way, that is not sufficiently known in this country. The flowers were kept in the cabin of a lady passenger during the entire seven days of the trip, photographed on arrival and lasted four days afterwards. This speaks well for the quality of the stock shipped from this well-known place and also for the care taken in the packing to insure safe arrival.

### Fancy-Leaved Caladiums.\*

#### Culture Outdoors in the Northern States.

Although many araceous plants closely allied to this genus are commonly used in sub-tropical bedding, the fancy leaved caladiums are not very popular. This is due principally to the fact that the foliage of most varieties is too delicate and cannot endure the rays of the sun. But it has been proven that some of the older varieties can be successfully used, especially when planted in half shade, and for this reason they are gradually becoming more popular. In Europe they have been used as bedding plants for many years. George Huster, for many years gardener at Girard College, Philadelphia, was the first to grow caladiums successfully outdoors in this country. He knew just what varieties would succeed and every season large beds of them would be scattered over the campus and were greatly admired. Since then a good many of the gardeners in the eastern and northern cities have followed his plan, and in almost every public park a bed of these beautiful leaved plants can be seen, planted in a shrubbery clump or in a single bed shaded by the boughs of a tree during the hottest part of the day.

In this latitude caladiums can also be grown outdoors successfully. At the Missouri Botanical Garden the beautiful little *C. Humboldtii* is used as a bedding plant with many of the older varieties. James Gurney, superintendent of Tower Grove park, St. Louis, has had great success with some of the recent productions. In the summer of 1908 he planted a large bed with about 50 of the newer varieties. Sub-tropical bedding was used as a background and the effect produced was truly wonderful. The location was prominent, and the plants called forth exclamations of wonder and delight by even the casual observer. Here we learned how few people knew these beautiful leaved plants, and it fully convinced us that few people outside of the gardening fraternity are acquainted with the caladium.

The culture of the caladium outdoors is about the same as the culture of other tropical bedding plants. The soil should be pulverized and well worked some time previous to planting the tubers, and a good proportion of leaf-mold, bone meal and sand should be incorporated. The tubers can be planted in a dormant state or they may be started in a greenhouse, and then planted out. It is claimed that those planted out in a dormant state eventually make better plants, because those started in a greenhouse are apt to sustain a check in the hardening off process and will sometimes even lose their leaves. The larger tubers should be used in the background, while the smaller may be used as a border in the front. The distance at which they should be planted apart also depends upon the size of the tubers, but on an average about one foot is the practical distance. As in the greenhouse culture water should be applied freely. Frequent watering with manure water is also absolutely necessary for the full development of the foliage. The tubers should be taken up in early fall to avoid danger from frost. They should then be placed to dry on a bench in the greenhouse. After they are thoroughly dry, they can be stored away in the same manner as those grown under glass.

#### Culture in Florida.

The following notes on the culture of caladiums in Florida are from the pen

Lietze, Bleu, Hoffmann and Bause newer productions are represented in his collection.

#### SOIL AND TIME OF PLANTING.

"The soil best adapted for the cultivation of caladiums in Florida is a rich, sandy humus, moist and always loose. A mucky soil or a heavy loam is not suitable. The soil must be deeply worked (at least a foot deep). An application of well rotted stable manure is spread over the ground or, if this is not obtainable, cotton seed meal should be spread over the ground at the rate of one ton to the acre, and plowed under in January. We commence with planting early in March and finish early in May. We plant in rows eight inches apart and set plants one inch apart in the rows. The tubers are divided like potatoes."

#### CULTIVATION, WATERING AND FERTILIZER.

"March, April and May are the dry months in Florida. For this reason irrigation is necessary, also half shade. This half shade is supplied by lath sheds which are built over the beds (see illustration). The ground must be frequently stirred with a hand cultivator until the plants shade the ground entirely. The soil must be kept free from weeds. When the plants are set out a half ton to the acre of Simon Pure fertilizer is spread over the ground and raked in. Another application of the same fertilizer (one ton to the acre) follows in August. The soil must be kept constantly moist un-

of Henry Nehrling, Gotha. Mr. Nehrling grows these beautiful plants on a large scale for the wholesale market. His collection of named varieties is the largest in existence. Nearly all of the

til the plants have finished their growth in November.

"When the cool nights of November set in the plants show signs of going to rest. Then digging of the tubers

\*Mr. Nehrling's paper commenced in our issue of July 10, 1909, and was continued July 31, October 9, November 27 and January 8, February 19, April 9, May 7 and 28, 1910.

begins. As long as they push up new leaves they are left undisturbed, but when they cease to do this they are harvested. They are dug and placed on layers of pine needles until they are perfectly dry. Then the salable tubers are stored in the packing house in sawdust, and the shipping begins soon after the first week in January. The tubers grown on very moist land and on mucky soil are often of a large size, but they rot easily and are not fit for shipping.

#### WINTERING THE TUBERS.

"All the tubers for propagating purposes are wintered in trenches in the open air. The trench should be six to eight inches deep. In this trench they are spread out and covered with six or eight inches of soil. Here they come through the winter in perfect condition. I have found that the tubers in Florida can endure a temperature of 40° and even 36° in the soil, while in the north they should never be wintered in a lower temperature than 55°.

#### PACKING THE TUBERS.

"The tubers sold to wholesale firms are usually packed in paper bags in sawdust. We pack each tuber separately in paper and then in paper bags with sawdust. These paper bags are placed in large boxes and are again thickly covered with sawdust. They are always forwarded by express, usually at a time when the weather in the north is mild. They are always held back when an exceptionally cold wave is announced by the weather bureau. Tubers sold retail are always wrapped separately in paper, packed in small boxes and forwarded by express."

### Past, Present and Prospective of the Seed Trade in America.

BY FRANCIS BRILL.

Some five years ago, when nearing the time of life allotted to the human race, I began to realize that after an experience of half a century in the seed business that I knew but very little thereof as compared with the younger generations in the trade, and the thought suggested itself that the little I did know of "The Past, Present and Future of the Seed Business of America" might interest the members of our association and perchance some non-members. To the officers then in control of the association I offered my services, but was informed that the programme for 1905 had already been made up. The next year I again sought the honor, in ample time for the convention of 1906 only to be informed that another person had been asked to prepare a paper on the "Early History of the Seed Business." A few months ago in correspondence with President Robinson the matter was referred to and through his courtesy it was arranged for me to prepare a brief paper on "The Past, Present and Prospective of the Seed Trade of America," which I now present to you.

#### SIXTY YEARS AGO.

As to the past, my memory goes back fully 60 years, when, as a boy, I knew personally several of the pioneer seedsmen of America. among them Grant Thorburn, Sr., his sons George C. and William, and later on the sons

of George C., the well known firm of James M. Thorburn & Co.; Thomas Bridgeman, and later his son Alfred for whom I clerked in the early fifties at the old seed store, Broadway and Eighteenth street, which locality was in those days considered "away up town," and was, in fact, in close proximity to many small market gardens where today stand great hotels and theaters, grand residences and lofty skyscrapers—monuments to the wonderful advance of civilization and progress in the new world, and the rapid and substantial growth of the city of New York practically, within three quarters of a century. Alexander Smith, Thomas Dunlap and Young & Elliott, all of New York; Robert Buist, Sr., later Robert Buist, Jr., David Landreth and Pascal Morris & Co., (by whom I was employed as clerk in 1857) all of Philadelphia; John Stair of Cleveland, founder of the present house of Kendel, and James Vick of Rochester, N. Y.

I remember well when, in 1847, Peter Henderson and his brother James came to Jersey City and bought out my uncle's establishment, market gardening and two or three small greenhouses, on rented land immediately adjoining my father's patch on the Van Vorst property. They were young men without much capital but plenty of grit. James died early, and the business was continued by Peter, who later on was associated with one Fleming in the seed trade in Nassau street, New York, and later was the head of the well known firm of Peter Henderson & Co. I am writing from

memory and may have overlooked some of the solid "old-timers," but they will not feel slighted, for undoubtedly they have passed away, and in company with those above named who have gone before, are now enjoying the reward promised to all who sell honest seeds. in that beautiful land "Where moth nor rust doth not corrupt nor thieves break through nor steal," nor over zealous congressmen and state legislators meddle with the seedsman's business. In this connection I desire to say that seedsmen who deal in vegetable and flower seeds, and handle only stocks of undoubted purity need have no fear of any laws hatched out by members of congress or members of state legislatures, which are absurd, uncalled for, and unnecessary.

#### OLD TIME CATALOGUE PRICES.

To get rid of dishonest dealers who sell "any old thing" that can be bought for "any old price" give them rope enough and they will hang themselves. I do not handle grass seeds but it seems to me it must be very difficult to detect foul seeds in most varieties thereof and undoubtedly some of the laws enacted or proposed are very unjust. In my boyhood days, and even up to 30 years ago, prices were higher and profits much greater than now; seedsmen turn their money practically but once a year and in former days seeds were sold at the seedsman's legitimate profit and not as now as too often the case, on the grocer's or dry goods merchant's margins, or along other lines where capital is turned monthly, or weekly, and why have conditions changed? Simply because some of our craft, not satisfied to do a legitimate competitive business have adopted a system of

cut-throat opposition. I was able to procure several old time catalogues to help me out, but have been disappointed—some claiming that such had not been preserved, and a few failed to respond although in each case I complied with the usual custom demanded. My thanks are due and hereby tendered to F. W. Bruggerhof of J. M. Thorburn & Co., for a copy of the catalogue of G. Thorburn & Son, 1827, 4x7 inches, 96 pages, in large part a treatise on the cultivation of seeds and flowers. Also "Catalogue of Seeds," James M. Thorburn & Co., 1847, and a bound volume of their catalogues from 1864 to 1877. S. F. Willard has also kindly loaned me a "Wholesale Price Sheet" of seeds for sale by Comstock, Ferre & Co., 1849.

It is interesting to compare these with the catalogues and price lists of the present day. For instance, to take a few leaders, Comstock, Ferre & Co., wholesale: Beet, per pound, including mangels and sugar, 50c; and Bassano (now scarcely known), 75c; cabbage, mostly imported varieties, \$1.25 to \$1.50; carrot, 75c to \$1; cucumber, 75c; lettuce, \$1.25 to \$2; melon, about 75c; onion, 75c to \$1; pepper, \$2.50; radish, 50c; spinach, 40c to 50c; squash, 50c; tomato, \$1.50; turnip, 50c to 60c. In the catalogue of G. Thorburn & Son, 1827, there are enumerated a line of seeds, some names of varieties still familiar, while others, having served their day and generation, are no longer in vogue; for instance, the list of cabbage seeds, mainly imported, comprises more than 20 varieties, 15 of which cannot now be found in any American seed catalogue. The various articles are not priced as now, but are prefaced by characters such as the (\*), (f), (s), (M), (§), etc., and letters (a), (b), (c) and (d), which refer to "A Key to the Prices of Esculent Vegetable Seeds" on the fly leaf at the front of the book. No pictures, no paint, in those days. Prices were 12½, 25, 37½ and 50 cents and \$1 per ounce, and 12½, 25, 37½ and 50 cents per quart, nothing said about packets, pecks or bushels. The subsidiary coins of those days and up to 1857 were largely the Spanish sixpence, 6¼ cents and shilling, 12½ cents, which accounts for the fractions. By an act of congress passed in 1857, the value of these foreign coins was fixed at 5, 10, 20 and 40 cents, which soon drove them out of the country.

Flower seeds were sold at six cents per paper, 100 papers for \$5. In the 1847 catalogue of James M. Thorburn & Co., we find prices quoted: Beans, per quart, dwarf or bush, 25 cents; pole varieties, 25, 37½ and 50 cents; Indian corn, seven varieties, including but one of sweet or sugar, 25 cents per quart; six cents per ear; peas, 14 varieties at 25 cents, 12 varieties at 50 cents per quart, and seven new varieties at 25 cents per packet. Very few of the names of the varieties are now familiar. Beet, seven varieties, including Swiss chard, mangel, and two of sugar beet, 12½ cents; yellow turnip and Bassano, classed as new, 25 cents per ounce; cabbage, 26 varieties including kohlrabi and savoy, two-thirds of which are now unlisted, 25 cents per ounce; carrot, two varieties for table use, 12½ cents per ounce, two varieties for cattle, 75 cents per pound; celery, 25 cents; cucumbers, Early Frame and Early White Spine, 12½ cents; Long Green Southgate, Long Green and Long White Turkey, 50 cents per ounce; lettuce, 12 varieties, six at 25 cents and six at 50 cents per ounce; egg plant, \$1 per ounce; melon, 25 cents; onion, 25 and 50 cents; pars-

ley and parsnip, 12½ cents; pepper, four varieties, 50 cents; Sweet Spanish and Sweet Mountain, \$1 per ounce; radish, 12 varieties, 12½ cents; spinach, 12½ cents; squash, 12½, 25 and 50 cents per ounce; tomato, Large Red, Large Yellow, Cherry and Pear, only four varieties, probably enough for those days, as I have heard my father say he could well remember when there was not a half peck of tomatoes sold in New York city. He was born there in 1800, and as a market gardener dated back to 1828 at Jersey City, N. J. Of turnips, 16 varieties, including two ruta bagas, are listed at 12½ cents per ounce; flower seeds, 6¼ cents, some at 12½ cents, and a very few at 25 cents per packet. There are too many kinds to enumerate, but I must note by way of comparison the universal favorite, sweet peas, of which hardly a dozen varieties, including everything under the head of "Lathyrus," are mentioned, while today there are varieties and sub-varieties, types and strains, running into the hundreds.

#### CALIFORNIA SEEDS.

I have a daughter married to a member of an extensive seed growing firm in California. A few years ago in writing home she said, "The soil of this section does not admit of our having such magnificent lawns as are common in the east, but we have 140 acres of sweet peas in our back yard." The next year 360 acres were grown; last year 500 acres, and still a greater acreage soon to be harvested in 1910. This is only on one ranch and probably not one-fifth of the annual output of sweet peas in the wonderful state of California, where thousands upon thousands, yea, hundreds of thousands of acres are cultivated in seeds of every description from beans and all sorts of vegetables, to the very finest

ish, 75 cents to \$1; spinach, 63 cents; squash, \$1.50; tomato, \$3 and turnip, 75 cents per pound; egg plants and pepper, 50 cents per ounce.

All figures given are by way of comparison with prices ruling at the present day. It is true that conditions have changed, and very materially so within the past 25 or 30 years. Seventy-five years back there were very few regular seedsmen in America, and they depended mainly upon Europe for their supplies. Sixty and even up to 50 years ago market gardeners to a great extent grew seeds for their own sowing and aimed to have plenty, hence frequently they had a surplus which was eagerly sought for by the few seed dealers, who were willing to pay good round prices, and did not "kick" as is sometimes the case in these days, if a few pounds were sold here and there to neighbors who chanced to be short. I well remember 60 years ago how the five market gardeners on the Van Vorst property at Jersey City interchanged seeds—each one growing one or more kinds and selling surplus to seedsmen. Dr. Tracy, of the Department of Agriculture, whom all of you know, writing of "Vegetable Seed Growing as a Business," asserts: "Records of only about 45 firms that were in business in this country as distinctly seed merchants previous to 1862 can be found, while a list of American seedsmen, published in 1908, includes the names of over 800 American firms whose sole business is the growing and handling of seeds; with more than 650 other firms making seeds an important part of their business."

Were it not for making my paper too lengthy, I would like to quote further from Dr. Tracy whose article is full of information, and as a whole

AT THE INTERNATIONAL FLOWER SHOW, PARIS, FRANCE.

Portion of Vilmorin, Andrieux & Co.'s Exhibit of Irises.

in flowers. By chance I have found a copy of my 1860 list—a one-sided sheet, 5x9 inches—with prices to market gardeners: Asparagus, 75 cents; beet, 75 cents; cabbage, \$5 to \$6; carrot, \$1.25; cucumber, \$2; celery, \$4; leek, \$2.50; lettuce, \$4; melon, \$1.50 to \$2; onion, \$1.50 to \$2; parsley, \$1; parsnip, 75 cents; pumpkin, \$1.50; rad-

very interesting. I must, however, beg to differ with him where he says: "Fifty years ago there was little general appreciation, even among experienced gardeners, of the importance of the quality of the seed used (provided it only would grow) as a factor in determining the real profit in growing a crop." My observations were

quite to the contrary. I will cite just one instance. My father and my uncle were the first to grow Early Wakefield cabbage in this country, having received it from Europe about 65 or 70 years ago, and it remained in the hands of the five Jersey City market gardeners for a number of years. Among those who were eventually attracted to its good qualities was one John Lundergan, of Watervliet, near Albany, N. Y., whose custom it was for several years to come down to my father every fall and buy seeds of various kinds, especially Early Wakefield cabbage. Upon one occasion my father's crop thereof was almost a total failure, so when Mr. Lundergan came there was no seed of that variety for him. My father had explained to him that his entire crop was but a single pound, which he must retain for his own sowing for market and for growing seed in subsequent years. After trying all sorts of persuasive argument, Mr. Lundergan drew from his wallet a \$50 bill, which he offered my father for that one pound of seed, but of no avail. That was a matter of confidence, the cornerstone upon which the seed business more than almost any other must rest for a successful upbuilding.

#### GOVERNMENT FREE SEEDS.

I am writing hurriedly and somewhat disconnectedly. I am very busy, and my health none too good, so you will kindly pardon any imperfections. In regard to the government free seed distribution: If such must exist, why not confine it to seeds of American production, the best of their kind that can be procured, ignoring entirely all commonplace stocks, and importing, if at all, only new and rare things, not yet introduced into this country? But Uncle Sam will have to get around early to be ahead of the enterprising, hustling seedsmen.

Now, in conclusion, why is it that while almost every other business is protected in some manner, working along in perfect harmony, yet so many of our craft are at swords points, cutting and slashing? I am utterly and unalterably opposed to trusts and combinations organized for the purpose of greed and robbery, but as "self-preservation is the first law of nature," why should not we work together for our mutual benefit? If I am correctly informed, the Wholesale Seedsmen's League has an understanding among the members as to prices at which seeds shall be sold, not exorbitant, but giving legitimate profits. Why not our association formulate some plan whereby every branch of our business can be honestly protected? Ridiculously low prices are not an incentive to gardeners and farmers to buy large quantities—each one knows for himself just how much seed he must have to produce a certain number of plants or to seed a given acreage, and whether the seeds costs \$1 or \$10 per pound he buys the necessary quantity—entirely unlike living commodities, for instance, meats. If beef sells for 10 cents per pound the laborer will buy more beef for his family than he will at 20 cents per pound. The same argument applies in the purchase of wearing apparel and other necessities of life.

I have given you an idea of prices prevailing half a century and more ago. You know what they are in these days. Of course, Europe with its cheap labor, and California, with its even climate and many other superior advantages, are important factors in making prices with which other sections have to compete; still, I am of the opinion that it is up to our associ-

ation to take action whereby all may live and let live. At the age of 74, I can hardly expect to attend many more conventions. My relations with my fellow seedsmen, as a whole, have been pleasant. I thank you for your patience in listening to such a dry and seedy subject. If I never again meet with you in convention, I trust that we may one and all meet in the good seedman's paradise. I shall endeavor to at least be entitled to a rear seat.

#### John Rindfleisch, Beloit, Wis.

The features of John Rindfleisch, Beloit, Wis., are well delineated in the picture herewith, taken from a local paper. Besides the irrigation project he has in hand, opinions are divided as to what this well known florist is doing to the rose bush with the magic wand-like arrangement he

John Rindfleisch, Beloit, Wis.

is manipulating. Mr. Rindfleisch intends to build an entirely new greenhouse plant of about 10,000 feet this season, the old houses being used for the culture of bedding and vegetable plants. Last year was an exceptionally good one and he could not get nearly enough good stock to fill his orders around the recent holidays. He has a word or two to say respecting the pickling process and shipping of stale stock to out-of-town points and he is going to grow just as much stock at home as possible. Plants, he says, are largely taking the place of cut flowers around the holidays and he is pushing this end of the trade which he likes better than sending out stale stock and having his customers come back with complaints that their flowers did not last during dinner. When will growers wake up to the fact that these practices are killing the business and wasting opportunities?

#### To Be Done Now.

##### IN THE GREENHOUSES.

After July 1 there is little use in keeping any roses or carnations on the benches that have to be thrown out this year. The sooner now the roses are planted the better.

Early flowering chrysanthemums will soon be showing bud and if they have obtained a good hold of the soil on the benches they can be fed a little.

Cool nights should be chosen for fumigating or sulphuring the pipes. The temperature should be got as low as 60° if possible.

Mme. Chatenay, Mrs. Jardine and Richmond roses are better for a light

shade now, especially in small houses where the foliage is near the glass.

Pick over the beds of Asparagus Sprengeri occasionally and do not allow the short stubby shoots left from careless cutting to remain. This plant needs abundant moisture now and regular feeding with liquid manure.

Dry off the roses a little that have to be carried over another season and prune after about two weeks' rest.

Thrips will not be nearly as troublesome in the rose and carnation houses if the old flowers and decayed foliage are kept constantly removed.

Continue to propagate rubbers by mossaing the stems after ringing and keep the moss constantly moist. Pot them singly as soon as roots show through the moss.

Prepare the benches for carnation planting, first carrying out any necessary repairs.

Amaryllis should now be kept on the dry side but not absolutely dried off as it sometimes practiced.

Pot the earliest freesias as soon as they come in and place the pots containing them in a cool shed or outside in the shade.

Keep the hydrangeas well watered in order to finish up good strong flower buds that will produce fine heads in spring.

#### OUTDOORS.

Weed killers are best applied after rain or before the walks dry up too much, but a hot day or two following their application makes them more effectual.

Roses of all kinds delight in ample feeding at this time, but it is useless applying liquid manure when the soil is hot and dry.

Allow a few stem thickeners on tree stems but do not let them get too strong. Look out for the stock shoots on grafted shrubs.

Look over seedling stock of herbaceous plants and mark any that show good points for propagating from.

Sweet peas cannot thrive on a dry soil. The rows should be well watered and mulched with strawy manure in hot weather.

Thin the shoots on the dahlias. A crowded condition of the plants leads to small, weak flowers. The root moisture also has to be kept going.

If stock plants of geraniums are short it pays to hoe frequently between them and keep them well watered in order to produce a quick active growth.

Keep after the side shoots on the violets and keep the roots as cool and moist as possible. Red spider always attacks plants in a hot dry position and this means the end of good growth.

Go over the carnations regularly every week and keep the shoots pinched in order to prevent their making useless wood or flowers.

Spray the callas once in a while as long as they are carrying any foliage but let them dry right out as the leaves fall.

Prick out young seedling herbaceous stock and see that the soil is kept well cultivated and free from weeds.

Lilium candidum badly affected with fungus should be lifted and the bulbs given a good drying in the sun.

SUNBURY, PA.—C. E. Rossiter suffered severely in the recent hailstorm, his greenhouses having suffered to the extent of over \$1,000. Mr. Rossiter carried no hail insurance.

THE date of the Second National Flower Show, to be held in Mechanic's Building, Boston, Mass., is March 18-25, 1911.

ALL indications point to a banner convention at Rochester. Get ready now; the date is August 16-19. Have you reserved exhibition space?

IN the advertisement of the Pulverized Manure Co., 35 Union Stock Yards, Chicago, in a recent issue, the price of the bone meal should have been \$15.50 per 1,000 pounds, not \$15 as there printed.

LOUIS VAN HOUTTE.—The centenary of the birth of Louis Van Houtte, the great Belgian horticulturist, was celebrated with much ceremony at Gendbrugge, June 26.

ACCORDING to the Journal of Horticulture, the long-famed Trentham gardens of the Duke of Sutherland in Staffordshire, Eng., are to be opened as a summer resort, and one of the large conservatories fitted up as a tea room.

## Society of American Florists.

DEPARTMENT OF REGISTRATION.

As no objections have been filed, public notice is hereby given that the registration of the rose, Red Killarney, by A. N. Pierson, Inc., of Cromwell, Conn., becomes complete.

H. B. DORNER, Sec'y.

June 23, 1910.

## Peter Barr Memorial Fund.

Many daffodil lovers and others among the host of friends of the late Peter Barr of London, Eng., justly called the "Daffodil King," will be glad to hear that a movement is on foot in England to commemorate the life and work of this most "lovable of flower lovers." The members of the Royal Horticultural Society's narcissus and floral committees have formed themselves into a general committee to consider the matter, the suggestions meeting with most favor being the institution of a Barr memorial medal to be awarded annually in connection with work among daffodils and the provision of a fund for the maintenance of an orphan through the medium of the Royal Gardeners' orphan fund, of which excellent institution Mr. Barr was one of the founders.

It is needless for us to dwell here on the valuable work of Mr. Barr among herbaceous plants in general and daffodils in particular during the course of his long, active and useful life. They are well known to all and we are confident that many on this side will be glad of the opportunity of subscribing to the memorial which will keep the name of Peter Barr green and also help those deserving and in need of it just as our departed friend would have wished. On our part we shall be glad to receive and acknowledge and also forward to the committee any donation our friends wish to make or they can send direct to the honorary secretary of the committee, Chas. H. Curtis, Adelaide Road, Brentford, Middlesex, Eng.

## Pipes for Greenhouse.

ED. AMERICAN FLORIST:

Would you please advise me through your paper what would be the best size pipe for heating two greenhouses 25x90 feet with hot water, one to be heated to 60°, the other to 50°, and how many 2-inch pipes would answer with two 3-inch flows overhead?

ENGLISH GARDENER.

Provided there is no glass in the sides of the houses and the outside temperature does not drop below zero, the houses can be heated to the temperatures mentioned by the use of 14 2-inch returns for 60° and 10 re-

turns for 50°, in addition to two 3-inch flows in each house. On some accounts it will be better to use three 2½-inch flows in each of the houses, with the same number of returns as suggested above.

L. R. T.

## Sweet Pea Diseases.

The National Sweet Pea Society of England has started an investigation of sweet pea diseases, submitting the following queries to members:

1—What is the nature of soil in which the peas are growing?

2—What kind of manures have been employed, and when were they applied?

3—Were the seeds ripened in this country or abroad?

4—Were the plants germinated indoors or in the open garden, and when were they planted?

5—Are few or many plants attacked by the disease?

6—At what stage of the plant's growth did the disease first make its appearance?

7—Is the disease general or is it confined to certain varieties? If it is so restricted, enumerate the sorts which are attacked.

8—Describe any preventive or remedial methods which have been employed, and the effects obtained from their use.

9—Have sweet peas or any other leguminous crop been cultivated in the same soil in recent years?

## Florists' Club Outings.

St. Louis, Mo., at Ramona Park, July 21.

Davenport, Ia., at a grove in Bettendorf, Ia., July 17.

#### SUMMER CONDITIONS.

The excellent quality of the carnations and roses up to within the last couple of weeks has been remarkable for the season but as was expected, the recent heat has had a bad effect upon the plants and the quality of the flowers has suffered accordingly. Not that the stock is poor for the season—it is better than usual—but we miss the fine roses and stiff-stemmed carnations that have been coming in and there is very little now that can be called first class. American Beauty roses from old stock are decidedly off color and in many cases the foliage is poor but there are numbers of medium length flowers being cut from young stock that are fine in every way and, with specially grown summer Kaiserins, form the best offerings among roses. Killarney is getting poorer week by week, the white variety being better than the pink but both showing the effects of a long

season's work capped by the tropical heat of the past three weeks. Carnations are small, poor in color and keeping qualities and retailers are beginning to inquire about asters for made-up work. Peonies are in by the thousands but the demand for them is poor, especially for the cheaper grades. There has been an unusually good demand for valley for wedding bouquets and this has been met with fine stock. Shasta daisies are fine and sell fairly well. Orchids are about equal to the demand and small flowers generally are over plentiful. The sweet peas from outdoors are of fair quality. Probably the extremes of temperature have been too much for them and unless very carefully looked after, the vines have failed and the flowers are short in the stem. The indoor crop collapsed all of a sudden and many houses planted to the late varieties have not paid for the labor and seed. Local growers say their asters are drying up for want of rain outdoors and that, un-

less it comes soon, the flowers will be poor in substance and small. Gallardias are true hot weather flowers and are arriving in great shape. But they are hot looking too and the public is not enthusiastic over them. The Japanese irises are superb, fine, well-colored flowers with beautiful gradations of coloring rivaling the orchid and some at least of our retailers catch the true spirit of these lovely flowers, arranging them with water lilies and cool green ferns, making a refreshing and beautiful window. As to the out-of-town business, it is keeping up remarkably well. Each day sees big consignments leaving the principal wholesalers' stores and there seems no end to the procession. One southern retailer has a standing order for 500 valley daily at one of the growers and for several days last week this was increased to 1,000. The vacation spirit is in the air and we are reserving space for the stories incidental to the "gentle art" that will soon be floating around.

# Summer Flowers

We devote a whole range of glass exclusively to **Kaiserin, Maryland, Killarney, Rhea Reid and Summer Beauties**. These are the best roses for hot weather. We bring our flowers in from our own greenhouses two and three times per day, after they have been thoroughly chilled and hardened. With the best facilities, our own growth of stock and long experience we solicit your trade. All goods billed at market prices.

are justly celebrated all over the United States for their fine quality. Our unexcelled facilities, both at the greenhouses and our wholesale store, enable us to handle the flowers, even in the **hottest weather** with promptitude and dispatch, insuring their arrival in first-class condition, no matter how far they are shipped. The stock we are now cutting is of exceptionally good quality and substance for the season.

Our **Beauties** of medium and shorter grades from young plants are splendid stock, fine foliage, good stems and flowers of fine color. **White Killarney** is in great shape and we have plenty for everybody. Also **Killarney, My Maryland, and Richmond**.

**Carnations** in all the leading varieties including fine **Enchantress, Winsor and Lawson**, are exceptionally good for this season of the year. **Home Grown Orchids**, fine fully developed flowers a specialty with us.

**Valley and Harris Lilies all the Year Round.**

**POELHMANN BROS. CO.** OFFICE AND SALESROOM: 33-35-37 RANDOLPH STREET. Chicago,  
LONG DISTANCE PHONE, RANDOLPH 35.

Everyone on the market heard with genuine regret of the death by accident of poor old George R. Wheelodon (Darby), who has been knocking about around the market for something like 30 years and was killed by a street car last Saturday night at Harrison street and Wabash avenue. A quiet, inoffensive old man he was often of assistance in busy times to many of the growers and commission men and in times of glut helped to clean up some of the cheaper grades of stock and got rid of it one way or another, none knew how but himself. He was very reticent about himself and his antecedents and very few really knew his name, "Old John" or "Darby" being those by which he was best known. He was a native of England and came to this country with two brothers 40 years ago. He was married and had two sons, one of whom was killed in a railroad wreck in Texas some years ago, the other living, it is said, in Buffalo, N. Y. As we go to press we are informed that the funeral will be held June 30, interment taking place at Mount Greenwood cemetery. The funeral train leaves the Polk street depot over the Grank Trunk at noon.

### NOTES.

Leopold Koropp, 4509 Evanston avenue, has been very busy this season. On June 15 he decorated the home of Miss Sterns, 4310 Hazel avenue. The wedding decorations were in pink; Killarney roses and peonies being used. The bride carried a shower bouquet of lily of the valley and white sweet peas. They also decorated the home of Billy Monroe, 143 Kensaw terrace, his niece being married and the ceremonies taking place at his home. The decorations were in pink, Killarney roses being used. Mr. Koropp also has the contract for decorating the roof garden at the La-Salle hotel the year around. John Farmer has charge of this work, including a lot of window boxes which will use up quite a large quantity of plants.

Creatore, the band leader at Sans Souci park, was surprised on Tuesday evening, June 20, by the members of his organization presenting him with a standing lyre of flowers, the event being his birthday. The piece was very pretty and was made up by W. H. Hilton, 1320 E. Sixty-third street. American Beauty and Jacqueminot roses, pink carnations and gladioli were used to make up the design. A large pink ribbon with the name "Creatore" was stretched across the center of the lyre.

Summer conditions seem to be absent from Poehlmann Bros. Co.'s store for everyone is kept on the jump handling the large consignments that arrive from the greenhouses several times daily. The stock of all kinds is in fine order for the season, perhaps the brightest of all being some fine Beauties now being cut from young stock, though there are also remarkably good flowers of Killarney and White Killarney.

Fred Quasthoff, 812 E. Forty-sixth street, recently received 500 geraniums from Pennsylvania, the express on same being \$7.20. All the plants have been sold and he is looking around for more. Mr. Quasthoff put in 1,200 ferns and they are about all that he has in the greenhouses at the present time. Advantage will be taken of the summer season to put in more pipes on the north side of the greenhouses.

H. L. Keun, 6847 Wentworth avenue, reports business very good, he receiving his share of funeral work. Mr. Keun has had a large number of his designs photographed and these may be seen all over the store. He recently made a design for some people who took it to the Klondyke regions. Owing to the distance and time necessary to reach its destination it was arched with cycas leaves and wheat.

Beauties from young stock continue to arrive at Peter Reinberg's in remarkably good condition, the flowers

large, of fine color and substance and with excellent foliage. Stock is extremely plentiful here considering the season, and large quantities are handled, the out-of-town shipping trade, especially to southern points, keeping up very well.

Mrs. J. C. Bruckner of the Normal Florist, 537 W. Sixty-ninth street, has been very busy this season. Something out of the ordinary occurred one day last week when 17 wedding orders were received. Mr. Bruckner who has been sick for some time past, is feeling better now, most of his time being spent in the country.

At Wiotor Bros. the stock continues in good shape, considering the hot weather and business is reported

ably good one for business and that the great quantities of stock handled have cleaned up well. Fine peonies and sweet peas are shown this week and all classes of green goods.

W. L. Sullivan and S. Friedman of the Woodlawn Floral Shop, 863 E. Sixty-third street, are well pleased with the way business has been the past month, they having had their share of funeral work. Graduation work was also plentiful.

C. W. McKellar, his wife and a party of friends left the city in his automobile for Milwaukee, June 25. The party took in Delavan Lake and Lake Geneva, Wis., returning after a most enjoyable trip on Monday night.

GOLD MEDAL PRESENTED TO W. N. RUDD BY THE HORT. SOCIETY OF CHICAGO.

fine. Frank Paszkeit of this firm is spending part of his vacation at Milwaukee and is going on from there to Grand Rapids, Mich., returning July 5.

W. H. Hilton, 1320 E. Sixty-third street, has added a flower department to his ice cream parlor and confectionery store at 1004 E. Sixty-third street. Mr. Hilton's daughter has charge of the store at 1004 and things have been going along nicely at both places.

John Mangel continues to draw the crowds to his window with the young ducks and chickens. He has been showing also some remarkably fine Japanese irises this week. John is a plucky buyer and there are no more attractive windows in the city than his.

Pehrson & Marine, 1134 Bryn Mawr, have finished their planting. Business has been very good but they expect a quiet season for the next few months. Mr. Marine stated that they are too far north to derive much benefit from the graduation work.

Vaughan & Sperry report that the month just past has been a remark-

Jesselson & Weiner, 617 W. Sixty-third street, have added a flower department to their store. H. H. Conn is manager of the place, he having formerly been in the employ of several of the retailers in the city.

Lincoln Coles (son of W. W. Coles) and wife, of Kokomo, Ind., were recent visitors. Mr. Coles runs his own plant, his specialty being American Beauty roses, which he grows very successfully.

The rose stock continues in wonderfully good shape for the season at the J. A. Budlong store. Killarney, Richmond, Jardine and Beauties from young stock are among the best offerings.

Zech & Mann are moving large quantities of roses and carnations of excellent quality for the season. The out-of-town trade keeps up and there is quite a lot of city trade as well.

The Fleischman Floral Co. reports a remarkable month's business during June, wedding, funeral and decoration work having all been very plentiful.

Head Gardener Schiele at Lincoln park, is well pleased with the way

things have been going. Cattleya gigas is doing well although not as many are in bloom at present as a few weeks ago. Mr. Schiele is more than pleased with the sobralias, these being extra fine. The conservatory is in very good condition. Two agaves (century plants) one on each side of the entrance of the conservatory, will be in bloom in a few weeks. One of the spikes is already 20 feet high. The tender water lilies are well advanced for this time of the year, being in full bloom, there being 12 different varieties in the pond. The hardy kinds are also in very good condition, these being in a pond by themselves. Everything on the outside is in first class condition, the geraniums and sweet williams showing up remarkably well. The white and yellow primroses are also doing their best. The men are busy at present potting chrysanthemums. Mr. Schiele now has charge of 16 men and it will be some time before any of them can take a vacation as they are very busy.

At Jackson park the rose garden is now at its best but if the present heat keeps up the flowers will probably not last long. There is an interesting display of herbaceous plants, many of which are in flower, around the garden. Several thalictrums are especially good.

August Lange's new electric delivery wagon is now making the rounds of his customers and giving great satisfaction.

Kyle & Foerster report business as good. We noted some extra fine Shasta daisies and galliardias here.

The E. C. Amling Co. has been formed to do a general greenhouse and

FLORIST

11 Main Street, CINCINNATI, OHIO.

Lexington, Ky.

The extremely hot weather is now upon us and as usual business is practically at a standstill. There will not be much doing from now on until the chrysanthemum season comes around again. Some funeral orders come in every now and then which keeps the florists from having day dreams. All the society folks are departing and this also helps to make business slow. The weather man says this is the hottest June we have had in this section for many years. Bedding plants are not up to the standard this year owing to so much rain and cold weather early in the spring, but if the present hot weather keeps up everything will be all right again in a few weeks. In roses, Killarney, My Maryland and Kaiserin are holding their own and they retail for \$1 to \$2 per dozen. Carnations are good for the extremely hot weather and they sell for 50 cents per dozen at present. Sweet peas are becoming more plentiful and they bring 75 cents per 100 blooms. Gladioli are good and sell for \$1 to \$1.50 per dozen spikes.

### NOTES.

J. Ferdinand Keller, manager of the J. A. Keller Estate on East Sixth street, is pushing all the planting of roses, chrysanthemums, carnations, etc., through. This firm has an exceptionally fine lot of young cyclamens and primulas coming on for Christmas. The carnation and chrysanthemum stock never looked better. Max Rudolph of Cincinnati, O., and Louis D. Singer of Frankfort were

1316 Pine St., ST. LOUIS, MO.

Both L. D. Phones. Supplies and Everything in Season always on hand

Miss Fanny White of Anderson & White on Georgetown street, was in Cincinnati last week buying stock for weddings. They are heavy buyers on the Cincinnati market.

August Le Clere, the florist and landscape gardener at the Eastern Kentucky lunatic asylum on Fourth street, is a very busy man at present at that institution.

H. F. Hellenmeyer, nurseryman, Sandersville, has finished rebuilding his new warehouse, which was destroyed by fire some time ago.

J. Ferdinand Keller, Henry Ballard and Lucien Le Clere were in Cincinnati, O., last week on business and pleasure both.

Lucien Le Clere and James P. Keller were sick a few days last week but they are able to be out again.

L. L. C.

Carnations

Fancy stock,  
500 for \$7.50.

Lilies

\$1.50 per dozen.

Our selection of colors. We make a specialty of having good, fresh carnations at this time of the year. Try a shipment.

Large, well hardened flowers of superior quality, long stems, and we can furnish them all summer in quantities.

Philadelphia.

A SMALLER DEMAND.

The demand has fallen off considerably, as nearly all the commencements and weddings are over, the commencements until next year and the weddings for the time being. A great burst of heat last week was very hard on the greenhouse stock, particularly carnations, which do not carry well now into the second day. Roses also show the effect of the blasts of heat and have to be cut very close. Beauties have been in good demand recently and have kept up well in quality. There has been a splendid lot of sweet peas, those of the Spencer type being very fine. Easter lilies are plentiful but do not sell as well as their quality, which is excellent, should insure. Valley is in good demand, but little work of quality going out without it. Peonies from cold storage are still in evidence and are found very useful for decorative work.

NOTES.

It appears as if there was always some one ready and anxious to knock the florist and his "high priced" flowers. This time it was the president of the board of education of the public schools. The girls' high school held its commencement last week and adopted the American Beauty rose as its class flower, each girl carrying a bunch of one dozen or more. During the exercises President Edmonds took occasion to say that he had been informed that the florists had formed a trust and had run the prices of the roses up to \$2 each. This he declared with earnestness was an outrage and should and would be looked into by the board. This is not the vaporings of a reporter, but in effect the words used by the gentleman. As a matter of fact, most of the roses were sold for \$3 per dozen and some for less, while a few were sent by friends which cost from \$4 to \$5.

The visit of the delegates to the seedsmen's convention at the invitation of W. Atlee Burpee to his seed farm and trial grounds at "Ford Hook," near Doylestown, was a great success; over 500 persons were present, being brought up from the city by a special train. Many words of approbation were heard on all sides at the wonderful order and system of the place. The host presented a fine appearance in his full white flannel suit and seemed to be everywhere directing and adding in every way possible to the pleasure of his guests. After an inspection of the extensive grounds a collation was served and the guests reluctantly took the special for the city, all agreeing that they had seen one of the best and most complete trial seed grounds in the country.

The Norwood branch of the Robert Craig Co. is now a very interest-

ing place to visit; here are seen long benches or half houses given to one class of plants which were sent to this department to be finished. Crotons are a prominent feature, as are dracaenas. A block of Pandanus utilis, scarce at present, is seen in perfection. Pandanus Veitchii is another plant that is seen in quantity. Several varieties of the most popular ferns are done well. When the fall shipments begin there will be found a splendid stock of the above mentioned plants that it will be hard to equal.

Godfrey Aschmann is very proud of his large stock of araucarias. This was imported early this spring and the plants are fine for growing on, and Mr Aschmann says he is kept busy making shipments daily to the trade, who buy now and get the benefit of the summer's growth.

Joseph Heacock is installing two 100-h.p. boilers at his new house at Roelf that will give him all the heat he requires and a lot in reserve, which Mr. Heacock says he finds is best for peace of mind.

The Opening at Waretown.

Those fortunate enough to receive an invitation to the "opening" of John Westcott's club house at Waretown on Friday and Saturday last were indeed fortunate, as it proved to be one of the best of those very pleasant annual events that are given by the commodore the last week in June. Those present this season included Robert and George Craig, George Anderson, J. W. Colflesh, John Burton, George C. Watson, John Westcott, Wm. Westcott, D. C. Donoghue, Dr. Lane, Charles Eimmerman, David Rust, John N. May of Summit, W. J., R. Farquhar and W. J. Stewart of Boston, James Dean of Long Island and H. B. Beatty, Pittsburg. Mr. Burton brought Messrs. Donoghue, Watson and George Craig in his handsome touring car, a most delightful ride of 80 miles in about three hours. Letters were read from those unable to be present, including a very interesting one from Edwin Lonsdale in far off Lompoc, Calif. The weather was all that could be desired, and while it was a trifle early for the fishing the party enjoyed to the full the sailing on the bay.

This beautiful sheet of water, called Barnegat Bay, is about 20 miles long by five miles in width. Mr. Westcott's cottage or club house is built not more than 100 feet from the water's edge and is certainly an ideal spot for a week-end visit for rest and recreation. The party from Philadelphia came down in a body on Friday morning, Messrs. May and Dean

arrived in the afternoon. On Saturday evening there was a jolly time in the club house parlor when Robert Craig, on behalf of the visitors, presented in his best style to Commodore Westcott a cellarette, a very substantial and ornamental piece of furniture made of quartered oak. This was acknowledged by Mr. Westcott in his wholesouled way, after which kind words of appreciation of what the host had done and was doing for their enjoyment were voiced by all the guests. These remarks were interspersed with songs and toasts and the company finally dispersed with the singing of "Auld Lang Syne."

The enjoyment of the party was heightened by the arrival of H. B. Beatty, of Pittsburg, who came on Sunday morning, and who in his generous way came laden with gifts, bringing books for the library and a silver and steel carving set for the table. The commodore on Sunday evening at another symposium said that he felt fairly overwhelmed at these demonstrations of his friends and gave the boys a heartfelt talk, taking as his text "Go Slow." It was a rare treat and one of the best efforts of the host as a speaker. Quite a few of the party left for home on Sunday and the balance on Monday, Messrs. Farquhar, Stewart and George Craig coming up with Mr. Burton in his car on Monday so that they should get a better view of the country. Long live John Westcott, the Waretown commodore!

K.

#### The Height of Affluence.

Hal Berri: "To be able to afford both children and an automobile."

L. F.: "Being situated so you don't have to get up till 10 o'clock Monday morning."

M. C.: "To possess shoe trees for all of one's shoes."

Subbubs: "To pass a green goods store (the kind the commuter ad-

mires) and not suffer agonies because you can't buy all those fascinating peony and rhubarb roots."

#### Her Dearest Pets.

"I have a heart-rending scene in my new drama."

"How now?"

"The heroine is in such reduced circumstances that she has to cook the canary."

"Sad, sad."

"But the worst is yet to come. She has to build the fire with the rubber plant."—Washington Herald.

#### Grasshoppers.

The name "grasshoppers" has been given to the railroad florists. There is some significance in the name, too, for these men just jump from one railroad lawn to another and keep them in good condition. They are especially busy at this time of the year in Pennsylvania in fixing up the station grounds and rights of way for the summer months. Each division has a certain number of men that look after the lawns and see that they get the proper attention.—Philadelphia Record.

BUSINESS POOR.

The business of the past week was not encouraging, the hot weather of the middle of the week, adding to the gloom. The steamship bookings for Europe show that an exceptionally large number of people will go abroad this season, consequently that much trade is lost to the dealers of this city, for the summer. Graduating exercises have called for some stock, but in this the demand has fallen off in recent years. Concerning this feature, the trade of this city has now to contend against a lot of pestiferous "reformers," who seem to think that it is a sin to make a child happy. So far as we are concerned, the aforesaid people can pound the white slave traffic and the saloons to their heart's desire but when they attempt to interfere in the florist business, which brings pleasure and sunshine into many homes, we draw the line. We have here, a lot of self-estimated aristocrats who spend here about three months of the year in working up trouble. During the other nine months they are in Europe or other places remote from this city, which is supposed to be their home. Some of them, when they go away, pay their bills, others do not. It will thus be seen that the florists of this city have troubles of their own.

## NOTES.

The fourth annual outing of the New York and New Jersey Association of Plant Growers will be held at the Mountain View house, Lake Hopatcong, N. J., on July 7. The members and their friends will meet at the Delaware, Lackawanna and Western R. R. depot, in Hoboken, N. J., and there take the 8:15 a. m. train, to which the association's special cars will be attached. Lake Hopatcong is a beautiful resort and it is hoped that many well take this opportunity to visit it. The committee in charge has arranged many contests for prizes both for ladies and gentlemen. The amusements will consist of bowling, shooting, boating, dancing, bathing, tennis, billiards, etc. The price of tickets is \$4 for each person, which includes transportation, luncheon, dining and all other events. Herman C. Steinhoff, West Hoboken, N. J., Julius Roehrs, Jr., Rutherford, N. Y., and Herman Schoelzel, New Durham, N. J., compose the committee in charge.

George Peterson, a familiar figure in the wholesale district, will soon embark for Europe. George was recently robbed of \$50, and he says that he has no more use for this country.

Edward Branch, for many years a well known figure in the wholesale district of this city, is ill and confined to his home. The business is being conducted by his son, Herman.

The New York Cut Flower Co. is now receiving heavy consignments of American Beauty and other roses from the F. R. Pierson Co., Scarborough.

J. K. Allen is handling a very fine line of phlox, carnations and feverfew. Many of the carnations come from McQuade Bros., Englewood, N. J.

Manager Cleary, of Cleary's Horticultural Co., contemplates closing for the summer months.

**New York Florists' Club Outing.**

The tenth annual outing, bean feast and games of the New York Florists' Club was held at Witzel's Point View Grove, College Point, L. I., on Tuesday, June 28, and was a great success. There were 350 present, the weather was magnificently fine and nothing occurred to mar the enjoyment. The programme included, besides the items mentioned below, two substantial meals which were done full justice to. Great credit is due Harry Bunyard, chairman of the outing committees, and his confreres, all of whom worked hard to make the affair the great success it turned out. The following are the principal events and prize winners:

Baseball Game, for boys under 14 years, five innings.—Winning team—Bogart, Weston, Harvey, Walter, Pepper, Iler, C. Pepper, B. Einsmann and L. Einsmann.

Ladies' Individual Bowling Match, three full frames.—Mrs. Wittman, first; Miss Matthews, second; Mrs. Donaldson, third; Mrs. Kingston, fourth; Mrs. Moltz, fifth; Mrs. Foley, sixth.

Baseball Game, Benedicts vs. Bach-  
elors, five innings.—Benedicts won,  
7 to 4.

Girls' Race, 4 years and under, 25  
yards.—Martha Schmutz, first; Edith  
Gloeckner, second.

Girls' Race, 5 to 6 years, 35 yards.  
—Dorothy Rassbach, first; Mary  
Smirk, second.

TRADE FAIR.

Without the funerals and commencements this market would be quite dead. As it is, the business done is not anything startling. Stock is over-plentiful, good, bad and indifferent. Carnations are going back very fast, the majority of stock coming in being second class. Valley has also taken a slump and quantities are going via the barrel. Beauties and sweet peas are moving out nicely, but stock surely is a drag. Quantities of phlox, lilies, daisies, candytuft and gladioli are seen. Greens of all kinds are plentiful.

## NOTES.

At the invitation of the Elliott Nursery Co. there will be an outing of the Florists' and Gardeners' Club to visit the nursery at Springdale.

Miss Stella Richter, of the Charters Cut Flower Co., McKees Rocks, and Herbert Jackson will be united in marriage June 30 at 7 a. m.

The McCallum Co. is handling a fine line of summer peas grown by T. F. Beckert, Neville Isle.

B. A. Cogill, Salem, O., was in town Friday taking in the Pittsburg and Chicago game.

W. H. Whittman is well pleased with his new store at Youngstown, O.

Some very fine Killarney roses are seen at the Pittsburg Cut Flower Co.

C. Puhlman, Carnegie, is contemplating building some new houses.

Gus A. Geng has the sympathy of the trade in the loss of his wife.

A. W. Smith of F. H. Westhoff, says his rose stock is doing nicely.

B. W. Smith of Oakland reports business good.

Seattle.

The usual slackness of the summer trade is very noticeable at present. Receptions, weddings and funerals will remain the principal business throughout June. Lots of good stock of all kinds is coming into the market. Outdoor roses are in great quantities and in some instances sell as low as 25 cents per dozen retail. Very fine sweet peas, both in Spencer and standard varieties, are beginning to appear in large quantities. The wholesale price is 20 cents per 100.

NOTES.

Mr. Pritchard, formerly manager of Graff's flower shop, has accepted a position with the Hollywood gardens.

Sam Graff of Graff's Flower Shop has returned from the east, having been on a business trip.

M. Couch, of Sandahl & Sons, is back on duty after his vacation.

Providence.

The closing of all the public and private schools, a large number of prominent funerals and quite a few June weddings all helped to cause a very good week's business for this season. Owing to the extremely warm weather we had the first four days of the week transient trade was very light and the usual summer quietness of the business was very much in evidence. This will give the retailer a chance to look personally after some of the delinquent bill paying customers, give the stock and fixtures a general overhauling, and make what improvements are needed. Vacations will be the next in order—and don't forget it is necessary for the help to have a vacation. There is a sufficiency of all kinds of seasonable cut flowers coming in at regular summer prices. Roses both indoor and out are of good quality and over abundant. Carnations are still coming in of good quality. Outdoor sweet peas are plentiful.

NOTES.

The June exhibition of the Rhode Island Horticultural Society, held in Falstaff hall, 123 Eddy street, was a disappointment because of the limited number of exhibits. There was no fault to be found in the quality, but the quantity was far below that of previous exhibitions. This was due to a combination of circumstances in which the adverse weather conditions played a most conspicuous part.

The Rhode Island Florists' and Gardeners' Club held its regular monthly meeting on the evening of June 20. The weather was so extremely warm that very little business was transacted. President Robert Johnston and William E. Chappell were appointed as a committee to make arrangements for the club's outing.

At the place of Wm. Hay on Dyer avenue the cut of summer roses, President Carnot and Kaiserin are very fine, both in quantity and quality. The new firm of Burke & Burns takes possession of this place July 1.

Ralph Armstrong of Wadley & Smythe, Newport, assisted with the decorations for the marriage of Theodore Roosevelt, Jr., in New York recently.

James B. Canning and wife went to Narragansett pier Saturday in their touring car where they were the guests of John J. Joyce over Sunday.

Wm. Johnston is now foreman for Mrs. Mary Pollock, 8 Franklin street. Mrs. Pollock reports business unusually good this spring.

Edward Murray, in charge of Wm. Hay's new flower market, reports a

## The Seed Trade.

### American Seed Trade Association.

E. L. Page, Greene, N. Y., President; L. H. Vaughan, Chicago, First Vice-President; M. H. Duryea, New York, Second Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

BURBANK has a new strain of watermelons in various colors.

VISITED CHICAGO: Lawrence S. Payn, representing Andre Leroy & Co., Angers, France.

SEEDSMEN should write the United States Department of Agriculture for Bulletin No. 382, "The Adulteration of Forage Plant Seeds."

FRENCH reports on biennial crops are unfavorable, showing in many cases one-third to one-half crop prospects only. Annuals in the main are reported to be looking well, but rain is needed.

AT Chicago onion sets are setting because of the heat, which is sufficient to wilt the tops during the middle of the day; rain now would be of great advantage. One more week of dry weather would almost mature the crop.

CHICAGO.—Contract prices on the board of trade June 29 for grass seed were noted as follows: Timothy, \$5, October. White clover, from 20 cents to 25 cents.—A. Miller, formerly with Vaughan's Seed Store, is now traveling for the W. W. Barnard Seed Co.

THERE has not yet been any decision given in the hyacinth bulb case recorded in our issue of May 21, page 824, under the heading of "Bulb Classification Hearing," nor is there likely to be a decision soon, as the court takes recess July 1. It is not unlikely that the case will be carried to the customs court for final review and that may mean a wait of years.

WISCONSIN growers report that the Alaska and other extra earlies, which were sown early and were ahead of the extreme hot weather, will probably give the best yield in peas, but those sorts that were just in bloom under the extreme heat wave have suffered. The pea district was favored with a nice rain on the night of June 27, which has improved matters a good deal. Field work in the seed pea crops has been taken in hand.

## Braslan Seed Growers Co.

Lettuce, Onion, Sweet Peas,

Growers for the Wholesale  
Trade Only.

SAN JOSE, CALIF.

FRANCIS BRILL's interesting paper on "The Past, Present and Prospective of the Seed Trade in America," read by him at the Atlantic City convention will be found on page 1093 of this issue.

THE death of Seth Monroe Pease occurred at his home at Avon, N. Y., June 27, 1910, after an illness of several weeks. Mr. Pease was born at Hamlin, N. Y., in 1841. As a young man he was in the employ of Briggs Bros. and later Hiram Sibley & Co., seedsmen, in Rochester, N. Y., but for

Officers of American Seed Trade Association.

Reading Left to Right: E. L. Page, Greene, N. Y., President; L. H. Vaughan, Chicago, First Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

the past 27 years he had been identified with the Cleveland Seed Co., formerly of New York city and Cape Vincent, N. Y., but since 1904 of Avon, N. Y.

### American Seed Trade Convention.

#### THURSDAY'S PROCEEDINGS.

The first order of business on Thursday morning, June 23, was the report of the committee conference with the National Association of Seed analysts, submitted by Chas. N. Page,

## Pieters-Wheeler Seed Company

Growers of  
High Grade  
SEED

Hollister,  
California

Onion,  
Lettuce,  
Radish,  
Sweet Peas,  
Etc.

Correspondence  
Solicited.

Des Moines, Ia. Mr. Page stated that at the time of the Boston conference, Edgar Brown, of the Department of Agriculture, promised to have the proposed uniform state law printed and sent out by the Department of Agriculture, and had recently reminded him of it, and he again stated that this would be done this fall, so that it would have behind it the endorsement of the department. Mr. Page, as chairman of the committee on state seed legislation, also submitted his report. On motion the foregoing reports were duly received and filed.

The report of the committee on the president's address was read by the chairman, Chas. H. Breck, of Boston. Recommendations No. 1 to 5, inclusive, were separately acted upon and unanimously adopted. President Robinson then introduced Hon. W. M. Hays, assistant secretary of agriculture, who delivered his paper.

Kirby White, of the special committee named to confer with the Wholesale Grass Dealers' Association regarding compensation to be paid to Curtis Nye Smith, as counsel for the American Seed Trade Association, reported recommending continuation of present appropriation for Mr. Smith's annual salary. The adoption of the report was moved by Albert McCullough, and carried, and so ordered.

The committee on obituaries, Chas. H. Breck, chairman, asked and was given further time to prepare suitable obituaries on deceased members and forward to Secretary Kendel after the close of the convention for inclusion in the proceedings of the convention. The committee is composed of William Eber, Quincy, Ill.; James J. H. Gregory, Marblehead, Mass.; John H. Allan, Picton, Ont., and Isaac Funk, Bloomington, Ill.

The convention then adjourned until 2:30 p. m., and President Robinson, after congratulating those present on their promptness, referred to the American Breeders' Magazine as doing good work, and as it had been warmly endorsed by Assistant Secretary of Agriculture Hays, he hoped members would send in their subscriptions for it, leaving their names with Assistant Secretary Vaughan. The election of officers resulted as follows:

E. L. Page, president.

Leonard H. Vaughan, first vice-president and assistant secretary.

M. H. Duryea, second vice-president.

C. E. Kendel, secretary and treasurer.

E. L. Page, S. F. Leonard and J. H. Ford were appointed a committee on nominations for members of executive and membership committee, and their report was accepted and approved and the nominees duly elected as follows:

Executive Committee—J. C. Robinson, Waterloo, Neb.; S. F. Willard, Wethersfield, Conn.; Chas. N. Page, Des Moines, Iowa; S. F. Leonard, Chicago, Ill.; Kirby B. White, Detroit, Mich.

Membership Committee—Albert McCullough, Cincinnati, O.; Frank C. Woodruff, Orange, Conn.; S. A. Wilson, Clinton, Wis.

The salary of the secretary-treasurer was fixed the same as the previous year.

According to custom a straw vote was taken as to the place of holding next convention for the information of the executive committee when they determine same next January, and letters were read from A. E. McKenzie, Brandon, Manitoba; George S. Lenhart, secretary-director

Atlantic City publicity bureau, and the following telegram from W. Atlee Burpee: "Most favorably impressed upon today's automobile trip with suggestion of our Minnesota friend Massey that next year's convention be held at the Roycroft Inn, East Aurora, N. Y. Am sure our friend Elbert Hubbard would give us a royal good time. Kindly emphasize the fact that we want everyone to come to Fordhook on the 10:50 special from Reading terminal on Friday."

Mr. Massie stated that he and Mrs. Massie had stopped at the Roycroft Inn and could vouch for its being a delightful location, and as to the dryness that was certified to by Mr. Burpee. The straw vote showed plurality for East Aurora. President Robinson appointed H. Holmes as a committee of one to find President-elect Page and escort him to the platform, and upon his appearance he was warmly greeted by the Retiring President Robinson, who warned him that he would know more about what he was getting into a year from now, and that he was glad the executive mantle was to fall on such broad shoulders so well able to sustain the responsibilities of the position and it appeared of recent years that the association seemed to have a preference for good-sized men. In response, President-elect Page said:

"I hardly know whether I am to be congratulated or sympathized with. I probably will know better about a year from now, as President Robinson has intimated. However, there is one thing that I do know and that is that I appreciate the honor that you have conferred upon me, and the confidence that you have reposed in me by this election. You know without my stating it that no man whom you elect to this chair to pre-

side over your meetings and deliberations can do all the work. It must be done by the committees and by the members, and I believe that each and every one of you that are members have a work to do, and if that work is done by you then this association will be a great success; and if it is not done by you it will not be done at all. I am impressed, and I think you are, that for the last few years in particular this association has been growing not so much in numbers but in its work, in its quality, and in its achievements. I believe that it stands for more today than it ever did before, and I see no reason why in years to come that it cannot stand for yet more and more. I thank you for your expression of confidence and the honor conferred."

On motion, the convention now adjourned sine die, and by request all repaired to the hotel parlors, where there was another event that was not down on the programme, a presentation to Retiring President Robinson. When all were assembled, Frank C. Woodruff, addressed Past President Robinson as follows: "The thing above all others which has made the American Seed Trade Association a success is the fact that it has been able to choose men of ability to head the organization each year, and the fact that these gentlemen have invar-

ably spent time and money unselfishly and generously on behalf of this association. While such a spirit has been invariably displayed by all of your predecessors, yet you have made it especially hard for the man who succeeds you, because in spite of the fact that you live a great many miles from the places where meetings have been held, and that it has been necessary that you spend a great amount of time and money to attend these meetings you have done so cheerfully.

"This has been a strenuous year for the association, and it was fortunate, indeed, that they secured a man who has done as much for the association as you have done. I learned today what I did not know last evening, that very many of the things which we enjoyed so much last evening were due to your personal purse, and we owe to you an additional debt of gratitude on that account. We cannot attempt to discharge it by this gift which amounts to nothing from a financial standpoint at all, but it comes from the hearts of this association's members, and we hope that in time to come when you use it, it will bring to mind your many friends in this association, all of whom will bear with them the pleasantest recollections of your administration and of yourself."

**10 per cent special CASH DISCOUNT.** On orders over \$2 for Flower Seeds if cash is enclosed, **10 per cent.** The discount does not apply to Asparagus Seed. Cash discount on this is 2 per cent

VAUGHAN'S "ELITE PANSIES."

This is not a complete mixture like our International; it does not contain any pure white, yellow or any self colors. It is comprised of the cream of four Pansy specialists' choicest and most expensive mixtures. Trade pkt., 50c; ½ oz., \$1.00.

## VAUGHAN'S PREMIUM PANSY MIXTURE.

Embraces all the varieties of the Fancy German Sorts. We have sold this mixture for the past seventeen years, and it has given general satisfaction. Per pkt. 25c; ½ oz., 75c; ¼ oz., \$2.50; oz., \$5.00.

## IMPROVED GERMAN MIXTURE.

This is a mixture of three strains from different German growers, and is made up mostly of separate colors, with a sufficiently large percentage of white and yellow. Per large pkt., 10c; ½ oz., 20c; ¼ oz., 30c; oz., \$1.00.

## VAUGHAN'S INTERNATIONAL PANSIES.

Vaughan's International Pansy Mixture was first prepared and offered by us in 1889. We import from all the best European sources, and personally inspected the fields of French and German specialists of their finest strains. Each year has added to the quality of its flowers, the variety of its colors. We buy every year novelties of known merit to improve the mixture. This is the reason it is always complete, always the latest and always the best mixture AS WE BELIEVE. We add to all the Pansy Mixtures, which we now buy more than fifty per cent of choicest named kinds obtainable, each in rightful proportion. We thus know what it will produce. This is one of the SPECIALTIES which has established and held the reputation of Vaughan's Flower Seeds and this is one which we maintain most carefully, not alone as to quality, but in vitality and germination. You are beginning right in Pansy growing when you start with Vaughan's International Mixture. Trade pkt., 50c; ½ oz., \$1.50; ¼ oz., \$5.00; oz., \$10.00.

## VAUGHAN'S "GIANT PANSY MIXTURE."

Embraces besides all the separate shades and colors, five special strains not listed elsewhere, and which can only be had in this and our International mixture. This mixture includes the richest reds, coppers and bronzes, together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain. Trade pkt., 25c; ½ oz., 60c; oz., \$4.00; ¼ lb., \$14.00.

Our list of "Seeds for Summer Sowing" now ready; if you have not received a copy please write for same.

| Beaconsfield, upper petals light lavender, lower ones deep rich purple.....                                                                                                                                                                                                                                                                                                                                          | .10        | .20    | 1.20   |
| Boulogne Giant. This is a special selection of a French Pansy grower; the flowers are of the largest size, of great substance and fine form, and are borne on particularly strong stems. They are mostly 3 and 5 blotched, delicately veined, while the colors are rich and varied.....                                                                                                                              | .50        | 2.00   |        |
| Bridesmaid. Its ground color is a Rosy White, rivaling in delicacy and beauty the finest apple-blossom, and most strikingly sets off the dark blotches of the center.....                                                                                                                                                                                                                                            | .25        | .45    | 3.00   |
| Bugnot. Of enormous size, perfectly round, of great substance. Our "Bugnot" contains shades of red, bronze and reddish-brown that are not found in other mixtures.....                                                                                                                                                                                                                                               | .25        | .45    | 3.00   |
| Cassier, 3 and 5 spotted, an A1 strain.....                                                                                                                                                                                                                                                                                                                                                                          | .25        | .45    | 3.00   |
| Emperor Francis Joseph. Very large, pure white with a large blotch of brilliant violet blue on each petal.....                                                                                                                                                                                                                                                                                                       | .25        | 2.00   |        |
| Emperor William, dark navy blue.....                                                                                                                                                                                                                                                                                                                                                                                 | .10        | .20    | 1.25   |
| "Fiery Faces," very rich scarlet, with a gold edge and yellow center.....                                                                                                                                                                                                                                                                                                                                            | .15        | .35    | 2.00   |
| Freya, deep purple violet, with a white margin.....                                                                                                                                                                                                                                                                                                                                                                  | .10        | .20    | 1.30   |
| Golden Queen, clear golden-yellow.....                                                                                                                                                                                                                                                                                                                                                                               | .10        | .20    | 1.30   |
| Mad. Perret, lovely shades of pink and rose.....                                                                                                                                                                                                                                                                                                                                                                     | .10        | .25    | 1.50   |
| Marchal Niel. Very large, without any blotches or veins and are of the same pleasing, delicate cream color as the rose whose name it bears.....                                                                                                                                                                                                                                                                      | .25        |        |        |
| Mauve Queen. A most pleasing mauve.....                                                                                                                                                                                                                                                                                                                                                                              | .25        |        |        |
| Masterpiece—New Giant Curled. This strain comes nearer to "Double Pansies" than anything ever introduced under that name. In reality the number of petals is the same as that in other Pansy flowers, but they are crimped and curled in such a fashion that the flowers appear double. The flowers are of enormous size, often 3 inches across, and the color variations and combinations are odd and striking..... | .25        | .60    | 4.00   |
| Orchid-Flowered. The ground color of nearly all the flowers is light, the petals being marked with large brown or golden yellow blotches which diffuse into rays and veins towards the edge. The upper petals are upright and plaited, resembling orchids. The colors are terra cotta, flesh, orange, rose, pink and lilac.....                                                                                      | .25        | .45    | 3.00   |
| Parisian Striped, stripes are broad and loud.....                                                                                                                                                                                                                                                                                                                                                                    | .10        | .20    | 1.50   |
| President Carnot, fine blotched white.....                                                                                                                                                                                                                                                                                                                                                                           | .15        | .35    | 2.00   |
| President McKinley, fine blotched yellow.....                                                                                                                                                                                                                                                                                                                                                                        | .15        | .35    | 2.75   |
| Pink, lovely shades of pink, same as Hydrangea.....                                                                                                                                                                                                                                                                                                                                                                  | .10        | .25    | 2.00   |
| Purple, very large, rich deep purple.....                                                                                                                                                                                                                                                                                                                                                                            | .10        | .20    | 1.00   |
| Paris Market, an improved strain of Trimardeau, with better flowers and more compact habit.....                                                                                                                                                                                                                                                                                                                      | .10        | .20    | 1.00   |
| Pretiosa. Each petal has a very large blotch of deep violet color, surrounded by a crimson background and the ground color is margined with a pure white edge.....                                                                                                                                                                                                                                                   | .15        | .35    | 2.00   |
| Psyche, elegantly curled and undulated and in every respect a beauty in form and color. The five velvety violet blotches are surrounded by a broad white edge.....                                                                                                                                                                                                                                                   | .15        | .40    | 3.00   |
| Rosy Morn. A bright purplish crimson margined with a clear white edge.....                                                                                                                                                                                                                                                                                                                                           | .25        | 1.00   |        |
| Siegfried. They are mostly 5 spotted with a clear white margin. The colors are of rich brown shades such as are found in the English wallflower.....                                                                                                                                                                                                                                                                 | .25        | .75    |        |
| Striped, mahogany, striped, and flaked white.....                                                                                                                                                                                                                                                                                                                                                                    | .10        | .20    | 1.00   |
| Trimardeau, mixed.....                                                                                                                                                                                                                                                                                                                                                                                               | .10        | .20    | 1.00   |
| Triolet Blue, a very pleasing shade.....                                                                                                                                                                                                                                                                                                                                                                             | .10        | .20    | 1.20   |
| Volcano. Color, bright dark red, each petal being marked with a very large dark blotch. The flowers are of large size and good substance and the edge of the petals are curled like those of "Masterpiece".....                                                                                                                                                                                                      | .25        | .75    |        |
| White, very large, with violet eye.....                                                                                                                                                                                                                                                                                                                                                                              | .10        | .20    | 1.00   |
| Yellow, immense flowers with dark eye.....                                                                                                                                                                                                                                                                                                                                                                           | .10        | .20    | 1.00   |

## VAUGHAN'S CUT FLOWER MIXTURE.

This mixture is put up by ourselves and contains mostly light colored sorts. We have sold this mixture for several seasons to some of our Chicago cut flower growers, who have realized big returns from the sale of the flowers. Pansies are as easily grown as violets, require less care and bring better returns. Trade pkt., 50c; ½ oz., \$1.00; ¼ oz., \$2.00; oz., \$8.00.

Past President Robinson, in reply, assured Mr. Woodruff that he greatly appreciated the occasion and the gift, but more so the place that it indicated he had won in the hearts of the members, which he would always

value highly; he had felt that he had got closer to them during the year of his occupancy of the presidency than ever before during the previous 20 years of his own membership in the American Seed Trade Associa-

tion. He trusted that the friendships formed would continue throughout life. He desired to again thank all who had assisted him throughout the year. The remembrance was a solid silver table service, suitably inscribed.

## The Day at Fordhook Farms.

A merry company assembled at the Reading terminal in Philadelphia on Friday morning, June 24, in anticipation of the trip to Fordhook. It is well known that whatever W. Atlee Burpee does is well done. He had provided a train of seven coaches for the accommodation of his guests, the members of the Seed Trade Association and their families. In addition to those who had come from Atlantic City, the party was augmented at Philadelphia by arrivals from New York, Boston and other points. A number of Philadelphians who had not attended the convention were also present; the train was personally conducted by Albert Hentschke, city passenger agent of the Philadelphia and Reading railway. Over 200 persons were on board. After a run of about one hour through a delightful section of the Keystone state, rich in evidences of an advanced stage of agriculture and horticulture, Fordhook was reached. Carriages were in waiting but as the distance to the house was short most of the visitors preferred the exercise of walking.

Before the house was reached, the towering figure of Mr. Burpee, standing on the veranda, was recognized by many of the visitors and there was a hearty cheer. Assisted by his most amiable wife and family, he held a reception that for spontaneous cordiality was a great advance on the time-worn official and society reception. For the remainder of the day, it is no figure of speech to state that Fordhook Farms was the property of the guests. In squads and platoons, though not in military formation, they roamed the broad acres—about 300—at will. They discussed sweet peas, incidentally plucking many blooms, garden peas, phlox, iris, salvias, California and Shirley poppies, mignonne, petunias, gaillardias and the many other flowering plants, vegetables and forage grasses found on the place. It is here that the testing or trying out process for Mr. Burpee's enormous business is carried on and, judging from the high state of cultivation, anything of merit has a splendid chance to make good. To the visitors probably the most interesting features were the sweet peas, as they lingered long among them. The number of varieties runs well up to 300 and if the rows were in one continuous line they would reach three miles. The acreage devoted to salvias is also noteworthy.

In his invitation, Mr. Burpee announced that luncheon would be served at one o'clock. That was a very modest statement, considering the fact that every hour after the arrival at the place, hunger and thirst could be appeased. At one o'clock the big dinner bell rang and the visitors assembled on the lawn and partook of what old fashioned folks call a "square meal." The bill of fare was elaborate and even the Boston men got all they could eat. At three o'clock there was an exhibition of the workings of the sprinkling apparatus with which the testing ground is equipped. It is a comparatively simple but effective device. Two-inch

pipes are run the length of a field between the beds and elevated on posts to a height of over six feet, the pipes are perforated with small holes and when the water is turned on the bed is watered much in the manner of a light rain. A lever, which a boy can manipulate, is attached to each pipe thus enabling the operator to shift the spray from side to side and water two beds with one line of pipe.

Just before the party returned to the train for the return trip to Philadelphia, President Robinson, speaking from the veranda of the Burpee home, on behalf of the Seed Trade Association, paid a glowing tribute to the hospitality of Mr. Burpee and his fam-

ily. Mr. Burpee replied in a graceful speech. Mr. Collins of the Northwestern Agriculturist made a humorous and eloquent address in which he emphasized the bonds of sympathy and fraternity that bind together all sections of this great country. The day was a red letter one to all who attended, and the event was one that will be well worthy of recollection in the years to come. In addition to all that has been enumerated, the weather was delightful and all the arrangements were carried out with graceful precision.

THERE are in the vicinity of 700 names for varieties of sweet peas.

## The Nursery Trade

### American Association of Nurserymen.

W. P. Stark, Louisiana, Mo., President;  
E. S. Welch, Shenandoah, Ia., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-sixth annual convention to be held  
at St. Louis, Mo., June, 1911.

THE eighteenth national irrigation congress meets at Pueblo, Colo., September 26-30, 1910.

VISITED CHICAGO: Chas. J. Maloy, of Ellwanger & Barry, Rochester, N. Y., returning from the Pacific coast.

THE Mac Rorie Maclaren Co., San Francisco, has been awarded the contract for laying out San Carlos park. Over 600 acres are included.

Two million fruit trees, occupying between 25,000 and 30,000 acres, mostly irrigated land, are being planted in the various districts of eastern Washington and Oregon, Idaho and western Montana.

PETERSBURG, VA.—The Arrowfield Nursery Co. has been incorporated with capital stock of \$2,500 to \$25,000 to do a general florist business. W. N. Roper is president, Edith M. Hutt vice-president and W. N. Hutt secretary-treasurer.

W. J. DEAN, superintendent of the Aboretum, Royal Botanic Gardens, Kew, London, England, expects to visit the Arnold Aboretum, Boston, Mass., this season and will doubtless call at other establishments of like interest during his stay in this country.

THE second largest apple orchard in Kansas, late the property of Wellhouse, comprising 800 acres with 45,000 trees has been abandoned for this crop, burned over and will be tried for other crops. Mr. Wellhouse said the orchard was never satisfactory, the subsoil not being suitable.

THE business and nursery of the Tyler Bros., Nursery Co., Kimberly, Idaho, has been sold to a company composed of John Hardin, John Henning, Wm. Durkee and C. E. Wright, who are reorganizing the business as a stock company, to be known as the Kimberly Nursery and Orchard Co.

BAYNES LAKE, B. C.—Wm. Williamson, late general foreman at Atherley Road Nurseries, Shanklin, Isle of Wight, Eng., has taken up the position of foreman in the Kootonia Nursery and Greenhouse Co. (Limited), of which business E. H. H. Stanley is managing director. Mr. Williamson comes well recommended.

### Roses at Ellwanger & Barry's, Rochester.

The annual rose show at Ellwanger & Barry's nursery, Rochester, N. Y., is in full swing and although the flowers are somewhat later than usual the display is magnificent. Altogether there are 15 acres of plants in flower and the place has been thrown open for the public to enjoy the flowers on all days excepting Sundays. Among the finest varieties Margaret Dickson stands out prominently the white and flesh tinted flowers coming in for much favorable comment. Snow Queen is of good habit and bears large pure white flowers. The old favorite La France, is largely grown and there are thousands of its delicately tinted flowers side by side with the now well known White Killarney and Killarney; Ulrich Brunner and J. B. Clark are also fine. Tausendschon and the white Nova Zembla are fine, as are the other ramblers, such as Philadelphia, while the showy Grass an Tepitz is ablaze with its bright red flowers which will keep going all summer.

In addition to the roses, the peonies have been a great attraction, but they are getting over now. Thousands of plants are grown in an open field of 10 acres and the sight of the tens of thousands of flowers has been a magnificent one. Among the newer varieties are La France, which is a re-

### The Willow Ware Industry.

Frank Dillingham, consul-general at Coburg, Germany, reports that although fostered by the government the growing of willows for the basket trade in Upper Franconia has as yet met with little success. He states, however, that by proper drying and growing in large enough quantities to be able to ship in carlots it is expected that the systematic culture of the willow will eventually prove profitable. The transportation of unpeeled willows in small quantities does not pay; only good, white, glossy ware of the best quality, dried in the sun, can be utilized as an article of trade to ship long distances in order to realize good prices. *Salix amygdalina* has proved the most satisfactory variety in Upper Franconia because it is less affected by changes in climate and damage by insects than other willows.

### The Arnold Arboretum.

ADDITION TO ADMINISTRATION BUILDING.

The new addition to the administration building of the Arnold Arboretum recently completed gives added facilities that are much appreciated by Prof. Charles S. Sargent, the director, and his assistant, Charles E. Faxon, for the proper arrangement and storage of herbarium specimens. The new structure, directly in the rear of the original building and made a part of it, is of brick and concrete, 50 feet square and four stories high. It was erected at a cost of about \$40,000, the subscriptions of friends of the arboretum, which is a department of Harvard University. It is considered to be fireproof and is without doubt the finest building for its purpose in the world.

The Arnold Arboretum contains 220 acres and its purpose is to grow all wooded plants that will grow in this climate and give the student the opportunity to study arboriculture. The arboretum is world-famous and students come here for study from all parts of the world. It was opened about 1880 and Prof. Charles S. Sargent has always been the director in charge. The building is at the Jamaica Plain entrance to the arboretum.

There are four large rooms devoted to the herbarium department, and six other large work rooms, all finished with concrete floors and steel cases, and furnished with large top tables and chairs. These latter pieces of wooden furniture are the only inflammable materials in the new building. The herbarium rooms are fitted with 336 steel cases, seven feet in height, two feet in depth, and contain 8736 shelves for the storage of 100,000 herbarium specimens, in folios. The original part of the building is now devoted to the library of the institution, which contains 25,000 volumes on trees and wooded plants. It is said to be the most complete library of its kind in the world. On the lower floor of the old building is to be found, in a large room to the left of the entrance, an exhibition of all woods of North America, which show the bark, half of each specimen showing the natural condition of the wood and the

SUMMER CONDITIONS.

Judging from the volume of business done the past week we can come to the conclusion that the good old summer time is surely with us. A little funeral work is about all that the retailers have to occupy their time, as there were not many weddings of note and fewer receptions. In the cut flower line we have some fine longiflorum lilies, valley and sweet peas. The carnations are holding out remarkably well, when the very warm weather of the past 10 days is taken into consideration. In roses the best offerings are in Beauties, Kaiserin and Taft, and the less said about the other varieties the better.

NOTES.

We had with us this week, one of Chicago's pioneer florists in the person of Mr. Weiland, who for years conducted a greenhouse establishment in the swell suburb of Evanston. Although past the allotted three-score years and ten Mr. Weiland is still well preserved and enthusiastic about the future of the florist business. He is visiting his daughter, Mrs. P. J. Olinger.

Henry Schwarz of Norwood had a big run on funeral work the past week and was an early buyer in the wholesale district every day. Henry will rebuild two of his greenhouses and add another house very shortly. When completed he will have a nice up-to-date establishment which is essential to his rapidly growing business.

Weiland & Olinger have a few asters but as long as white carnations are to be had these do not cut much of a figure. Smilax is in fair demand but the asparagus from the south does not come through in good shape and the money realized from shipments really does not compensate the grower for his time and trouble.

Tom Windram is sending Shasta daisies to the James McCullough's Sons Co. and a limited quantity of gladioli were noticed at this place, undoubtedly a forerunner of the thousands that will occupy the tables in the very near future.

What is the matter with C. E. Critchell? The races have been going on for three weeks and we find Charley at his desk every afternoon as busy as he can be. No doubt he is preparing for a good long vacation and needs the money.

Word was received from C. J. Ohmer, West Palm Beach, Fla., that he is a daddy, a girl having arrived at his home on June 24. Mother and daughter doing well and congratulations are in order.

## 20 Per Cent Discount on Bedding Plants for Stock

For the next ten days we will allow A DISCOUNT OF 20 PER CENT. on any of the following plants except Ferns and Cyclamen:

Specimen 10-in. and up \$2 50.

The outing of the Florists' Society will be held July 21 at the Country club, Carthage, O. This is a dandy place and a good time is in store for all who attend.

The Bloomhurs and Floral Co. are getting their place in fine shape, and it is the intention of William Sunderbruch to have everything planted by the Fourth of July.

Albert McCullough has returned from the seedsmen's convention and reports a delightful time and a very successful convention.

Visitors: S. S. Skidelsky, Philadelphia; representatives of the Sefton Manufacturing Co., Chicago.

Buffalo.

GOOD BUSINESS.

The past week has been all that could be wished for, ideal weather, very warm, but good for business. School commencements have been very numerous and the supply of flowers equal to all demands. Roses, carnations and peonies were most sought. Accompanying the graduation exercises were a very large number of weddings from the most elaborate in flowers and plants to the small bouquet and a trip to the church, all of which has kept the retailers busy, and now that it is almost July 1 many will be glad of the opportunity to enjoy their vacations, thinking that the season passed has been a good one.

## Brides and Maids

2 1/2 -in. \$2.50, 100; \$25.00, 1000. Numerous other good sorts in prime stock.

THE LEEDLE FLORAL COMPANY. SPRINGFIELD, OHIO.

Where the florists will spend their vacation is still a mystery, excepting to W. F. Kasting, who will summer at his place in Erie, Pa., and automobile to nearby places. American Beauties, My Maryland and Kaiserin roses with a limited supply of Carnot, are the best that we have here. Carnations are in good supply and in most cases good quality. Sweet peas were never better than at the present time and in great demand. Valley and orchids are good and selling well.

It is safe to say that this city will be well represented at the Rochester convention as the club expects to go down for two days while others will go down and back each day.

The state convale of the Knight Templars last week was good for the trade. Many orders for different receptions were handled.

The opening of J. N. Adam & Co.'s new store gave S. A. Anderson a large decoration of palms, ferns, box trees and cut flowers.

J. N. Bailey of the Buffalo Cut Flower Co., is very ill. BISON.

## Alternanthera JEWEL

We can still supply first-class plants of this magnificent new bedding plant. If you buy now, you will be able to have stock for another year. To clean out, we will make a special price of \$1.50 per doz.; 10.00 per 100.

## Gardenias

We can quote you in any quantity. 3-in. \$18.00 per 100; 2½-in. \$12.00 per 100. Getting down on 'mums, but still have a few thousand at \$25.00 per 1000.

Davenport, Ia.

Business during June has been exceptionally good, owing perhaps to the marriage of a number of very prominent people and the death of several. One funeral, that of W. Bettendorf, a prominent manufacturer, called for nearly \$2,000 worth of flowers. Graduations at the different schools and colleges also called for an unusual amount of flowers. With but few exceptions the local growers supplied the demand. At present, however, flowers are very scarce and of poor quality, owing to the extremely dry and hot period—three weeks now without a drop of rain and the glass around 90° every day. Carnations and all outdoor stock are suffering badly for need of water.

Ewoldt Bros. entertained the Tri-City Florists' Club at their home, Floral Hill, on the evening of June 23. This was in the nature of the fifth annual strawberry feast, and, in spite of the great heat, a good number was present, and a good time was had. One new member was admitted to the society and a committee of three—Henry Pauli, Wm. Goos and Henry Gaethje—was appointed to make all arrangements for the annual picnic, same to be held some time during July. "Vines for Different Purposes" was the evening's subject. As Harry Bills and A. Anderson, last year's strawberry eating champions, were not present, the annual contest was declared off, and the leather medal will be used at the annual picnic for some other purpose.

Henry Pauli is clearing away the rubbish of his old houses and has everything on the ground for three new ones, which will be built at once. Pauli has the old Campbell place planted all in chrysanthemums and asters.

Supt. Boehm and his assistants have the parks looking fine this summer in spite of the dryness. Spraying the trees is the biggest job now, as the insects are more numerous than ever

# WE TAKE THE LEAD

In what? What a foolish question! Don't you know? Didn't you hear of **GODFREY ASCHMANN**, the great *Araucaria* Importer, Grower and Shipper? These so well favored, everlasting green decorative plants, the *Araucaria Excelsa*, *Robusta Compacta* and *Excelsa Glauca*, are in favor more than ever this year.

This is our 25th anniversary since we began importing *Araucarias*. Watch! See us grow! Beginning 25 years ago with 100, our this year's (1910) importation is **10,000**, and more are coming this fall after I have made my selection of the choicest of the choice on my trip to Belgium; he growing district of the world in *Araucarias* and *Azaleas*. The trade is well informed that for many years past I go personally to Belgium to protect and select for my customers the best of *Araucarias*, *Azaleas*, *Palms*, etc., that cash can buy there. Empty houses won't pay. Now is the time to fill your empty houses with something to grow into money while you are asleep.

Remember, it is the wideawake man that is not afraid to invest a dollar that makes the money. Please look at our special low prices for superior stock.

*Araucaria Excelsa*, raised from top cuttings, no seedlings. Plants, 5-5½-6-7 in. pots, 12-15 18-20-25-30 in. high. 3-4 5-6 tiers. 2-3-4-5 years old, 35c, 50c, 60c, 75c, \$1.00, \$1.25 to \$1.50 each.

*Robusta Compacta*, *Excelsa Glauca*, 6 in. pots, \$1.00 to \$1.25 each.

*Kentia Forsteriana*, in fine shape, 6-in. pots, 30-35-40 45 in. high. 4-5-6 years old, 75c, \$1.00, \$1.25, \$1.50 \$2.00 to \$2.50 each.

*Kentia Belmoreana*, 25 30-35-40 in. high. 5-5½-6-7 in. pots, 5-6-7 years old, 50c, 75c, \$1.00, \$1.25, \$1.50 to \$2.00 each.

**A. & G. ROSBACH**, Pemberton, N. J.

before, having no rain to wash them down.

Staack's, Moline, Ill., are rushing things at their new range near Wauertown, which when completed will be the finest in this part of the state.

Wm. Knees has planted two benches with carnations, and is busy bringing in the rest. He is also installing a new boiler.

A. Anderson, Moline, Ill., is visiting Sweden and the Bachelor club is worried fearful that A. A. might break his vows.

It took 10,000 rose plants to fill Ludwig Stapp's two new rose houses and they are all looking fine.

Ewoldt Bros. and Wm. Knees are cutting some fine Golden Glow chrysanthemums.

Harry Bills is busy glazing his new greenhouses.  
T. E.

*Kentia Belmoreana*, 2½ to 3 in., 10c each.  
Standard Bay Trees, 1-foot tubs, 7 ft. high from bottom up, \$8.00 per pair.

*Sago Palms*, ready July 15, 6-7-8 in. pots, from 5 to 20 leaves, 10c per leaf.

*Cocos Weddelliana*, 3-in. pots, 18c to 20c.

*Nephrolepis Whitmanii*, Boston and Scottii, 4-in., 20c; Scholzei 4-in., 25c; 6-in., 40c.

*Begonia Gloire de Lorraine*, deep pink, 3-in., 20c; 4-in., 25c. *Begonia Lonsdale*, pale pink, 3-in., 20c; *Begonia Vernon*, pink and red, 4-in., 7c.

*Begonia Flambeau*, 6 in., 25c.

*Cannas*, Richard Wallace (best of the red), J. D. Eisele (also one of the new best reds), large 4-in., \$7.00 per 100.

*Scarlet Sage*, Clara Bedman, 4-in., 7c.

*Verbenas* and *Phlox Drummondii* and *Single Petunias*, in bloom, 3c.

*Double Petunias*, 4 in., in bloom (red or pink), 7c.

St. Louis.

TRADE DULL.

The weather during the past week was very warm and with it came the regular summer dullness. Everything was plentiful with the exception, perhaps, of first class stock, especially roses. Beauties came in soft and many of the blooms fell to pieces before becoming fully developed. Sweet peas are a positive glut; everybody has them and the demand is very slow. Prominent down-town stores not wishing to wipe out forever the fakir take up his dying cries and announce sweet peas five cents a bunch and carnations two dozen for a quarter. In former years the retailers cried out the fakir hurt their trade and now they follow the tracks of this much-abused individual. The grower is earnestly praying for fall and return of living prices; everybody wears a tired feeling, wholesalers and retailers alike. The poor commission man is trying to squeeze out all he can for his grower out of inferior stock and has to stand the kicks made by his retail customers, and the cry of the grower who has not realized much more than express out of his last shipment. Throwing out will soon start up and a more limited supply of mid-summer stock will steady and brace up the market.

## NOTES.

The Sanders Nursery baseball club will endeavor to humble the Bentzen Floral Co. and take the place of Young & Sons. The Sanders club is a strong aggregation and will make those Bentzen boys hustle. Young Bentzen and Young Sanders will be the respective catchers for their teams. Young Bentzen claims that Sanders' team won't be in it, but Sanders claims that the Bentzens will be a sorry bunch when they get through with them. The betting is even money. Don't forget, July 21, at Ramona park.

The Retail Florists' Association held a meeting June 20 at the Knights of Columbus hall. A full attendance was present. The members were unanimous in condemning the practice of those engaged in the wholesale busi-

Rooted Cuttings. Ricard, Poitevine and S. A. Nutt; Orders booked for delivery on or before Oct. 15th at \$10.00 per 1000.

### Smilax and Sprenger

Let me send you a sample. The Smilax is extra fine stock; Sprenger is good, but not large.

Smilax.....\$12.50 per 1000

Sprenger.....15.00 per 1000

HARDY PHLOX, rooted cuttings, in good assortment, mixed, at \$1.25 per 100. free by mail. Ready now.

GERMAN IRIS, good assortment, in mixture, ready in August, at \$2.00 per 100.

**ALBERT M. HERR,**

**Lancaster, Pa.**

ness doing any retail work or taking retail orders. Several other matters were talked over, especially those relating to the practice of "crepe chasing," as being against the best interests of the business.

Henry Ostertag is looking for a negro who offered an insult to his daughter, Helena, 15 years old; on June 18. Mr. Ostertag has offered a liberal reward for his arrest. Miss Helena was grabbed by the negro close to her home but struck him and was fortunately able to get away and reach her home.

W. J. & M. S. Vesey are shipping some extra fine white and pink carnations, also some good quality roses in Killarney and White Killarney.

Henry Ostertag will decorate the cars on the Frisco, that will carry the St. Louis contingent to the Jeffries and Johnson fight.

Last week was the first week of early closing by the wholesalers. They make it up coming down early in the morning.

Fred Pape has been a big buyer during the past week for heavy orders in funeral work.

Mr. Ellison of the Ellison Floral Co., will leave shortly for the season up in Michigan.

Mrs. Frances Kling, of Young & Sons, is going to take a trip to Atlantic City, N. J.

Geo. Angermueller and Charlie Schone will go on a fishing trip in a few days.

Henry Meyer, Sr., is still at the old stand and is a daily visitor to the market.

C. A. Kuehn is handling some of the best carnations seen in the city.

W. F.

### Kansas City.

STOCK PLENTIFUL, QUALITY FAIR.

Stock of nearly all kinds has been coming in very plentifully. Roses have been poor and move very slowly. Kaiserin holds up better than any

## A New Fern NEPHROLEPIS GIATRASHI

Awarded a Certificate of Merit by the Horticultural Society of New York.

Prices: In 2¼-inch pots, \$2.00 per dozen; \$12.00 per 100; \$100.00 per 1000. 25 plants at 100 rates; 250 plants at 1000 rates. Orders delivered in rotation as received. Now Ready for delivery,

**GEORGE GIATRASHI,**  
463 Summit Ave., West Hoboken, N. J.

## Ferns for Dishes...

Assorted varieties, 2¼-in. pots, \$3.50 per 100; \$30.00 per 1000. Cash with order.

**FRANK OECHSLIN**  
4911 Quincy St. CHICAGO.

## PALMS, FERNS AND Decorative Plants

**JOHN SCOTT,** Rutland Rd. & E. 45th St.  
BROOKLYN, N. Y.

other variety but the hot weather causes even this rose to open up quickly. Beauties are faded and almost unsalable. Carnations are of fair quality with a good demand for the better grades. Prices range from 75 cents to \$2.50 per 100. The outdoor flowers, such as sweet peas, gladioli and daisies, are excellent, but the demand is poor causing a great loss of stock. There is plenty of green goods, such as asparagus, smilax and hardy ferns.

### NOTES.

Samuel Murray, who has for a great many years occupied the building at 1017 Broadway will move about July 15 to 913 Grand avenue. He has been forced to move on account of the expiration of his lease but his new location opposite the postoffice and in the center of the office building district is a very desirable one and will no doubt prove much better than his present place.

Many of the retailers are now closing at 6 p. m. We cannot see why all do not follow this good example.

Work is progressing rapidly on the W. H. Hennfeld greenhouses. Two are being erected, each 20x100 feet.

MISSOURI.

## Cleveland

June weddings and school commencements are over, and summer dullness will soon be here, with its vacations and rest. The first six months of this year have been very good for growers and retailers from a financial standpoint; nearly all report having done good business and made some money. The peony season is about all over, and in this section was of rather short duration. Water lilies are beginning to come in now. A few calls for asters have been heard, but so far there is nothing doing in that flower. A few gladioli are coming in, but the demand is very limited. Roses and carnations are plentiful but all show the effects of several very warm weeks. Sweet peas are plentiful but of none too good quality. Greens are plentiful except ferns.

Society people witnessed one of the most beautifully appointed weddings at St. Pauls Episcopal church last Saturday at 4 o'clock that has ever been seen in this city. The occasion was the wedding of Miss Merian Norton, daughter of D. Z. Norton and wife, and Frederick White, son of R. C. White and wife. Nine arches extended across the chancel, eight of which were 13 feet, and the center arch being 20 feet, all covered with southern moss and Bermuda lilies. In the center of the large arch hung a wedding bell of daisies with a border of lilies. The bell was the same one used by the bride's mother at her wedding. At each side of the arch a broad hedge of lilies extended entirely across the church. The altar and altar railings were also decorated with lilies, while smilax showered the chandeliers and arched the doorways. A quantity of beautiful flowers decorated the house and a large tent erected on the lawn. One side of the living room was banked with cibotiums, a tall standard of Bermuda lilies gracing the arched window, while gold baskets filled with the lilies were artistically arranged about this room. White peonies adorned the hall, and the reception room was decorated with American Beauties. The bride's table was set in the large dining room and was the most stunning and effective table of its kind ever seen in this city. A large bell of white Spanish iris tied with white lace hung in the center, the room being canopied in white satin ribbon, and garlands of smilax hung with gold bells, all caught at the side with large bells.

In the center of the bride's table a large mat of Spanish and English iris and valley, from which the sprays extended out on table caught with Nile green satin ribbon and white lace. Associating the honeymoon which will be spent in motoring through Europe, an automobile of pink rambler roses holding a bride and groom driven by a Cupid as chauffeur graced the large buffet table at one end of the tent. Forty dainty white baskets filled with pink rambler roses were artistically arranged on the guests' tables. Smith and Fetters Co. had charge of the decorations.

## NOTES.

Kirchners report a very heavy funeral business, their automobile delivery alone enabling them to take care of it properly.

G. W. Mercer has moved across the street from his old stand, while he is erecting a fine brick block in its place.

The Jones-Russell Co.'s fiscal year ends June 30, and the firm reports a very prosperous year.

**POEHLMANN BROS. CO.,** Morton Grove, Ill.

## Yonkers, N. Y.

The first annual June show of the Horticultural Society was held June 17 in the hall of Hollywood Inn. The exhibits consisted of pot plants, cut flowers, fruit and vegetables. All were very attractively arranged; the many varieties of flowers formed a symphony of color to greet the visitors' eye. Roses, orchids, sweet peas, peonies, flowering and foliage plants and herbaceous flowers formed the principal display. Strawberries, the big and delicious looking kind, composed the fruit exhibits, while the vegetables were many and fine. That it was a success there can be no doubt by the way the many visitors praised the various exhibits, and the society has great hopes of making even a greater success of the fall show, which is to be held November 1. During the evening Butler's orchestra added much to the enjoyment of the visitors with very fine music. The judging of the exhibits was by Robert Angus of Tarrytown, James Stuart and Thomas Aitchison of Mamaroneck. The following are the awards:

Group of foliage plants to cover 15 square feet of floor space, arranged for effect (donated by the Yonkers Nursery Co.)—S. P. Lillenthal Estate, H. Scott, gardener, first; O. E. Oppenheimer Estate, J. Goff, gardener, second.

Twelve hardy roses, three varieties, four of each (donated by Thompson & Brown).—General McAlpin, Ossining, J. Woodcock, gardener, first; Adolph Lewisohn, of Ardsly, J. Canning, gardener, second.

Six hardy roses, two varieties, three of each (donated by H. L. Twine).—Lillenthal Estate, first; H. Joseph Butler, second; R. E. Prime, third.

Twelve roses, one variety, any color (donated by Mr. Randolph).—General McAlpin, first; Mrs. T. H. Wheeler, H. Wells, gardener, second.

Collection of hardy roses in not less than 12 varieties.—General McAlpin, first, with 80 varieties; Mrs. J. B. Trevor, H. Nichols, gardener, second.

## Asparagus Sprengeri

100 seeds, 15c; 250 seeds, 25c.  
1000 seeds, 75c; 5000 seeds, \$3.25.

**Vaughan's Seed Store**  
Chicago and New York  
36 & 38 Randolph Street 25 Barclay Street

Collection of sweet peas in six varieties, 25 sprays of each (donated by Milton Peck).—Mrs. J. B. Trevor, first.

Three varieties of sweet peas, 50 sprays of each (donated by the Yonkers Decorating Co.).—Mrs. J. B. Trevor, first.

Collection of herbaceous flowers in not less than six varieties (donated by H. Bianchi).—Wm. Hebach, first.

Collection of flowering shrubs in not less than 12 varieties (donated by Lee Whitman).—Mrs. T. W. Wheeler, first.

Three varieties of peonies, six of each (donated by Mr. Taylor).—Adolph Lewishohn, first.

Specials were awarded as follows: Julius Roehrs Co., Rutherford, N. J., display of orchids; Scott Bros., Elmsford, display of roses; Yonkers Nursery Co., group of palms, cut flowers and flowering plants; Peter MacDonald, centerpiece of roses and lily of the valley and graduation basket of gladioli and carnations; Melilot, wedding decoration of palms and roses. (This occupied the entire stage and was one of the best specials.) Cochrane Estate, R. Cumming, gardener, display of foliage and flowering plants; W. Hebach, collection of cut annuals and roses; Lillenthal Estate, miscellaneous flowers and ripe tomatoes.

L. W.

### The Truth About the German Potash Law.

Among Germany's most important natural resources there are about 70 mines that furnish the world's supply of potash. At present these mines can supply more potash than the world is using, but not more than the world can use profitably, and not more than the world would be using if the farmers could buy potash as readily as they can buy other things. Under these conditions there is a tendency for some of the mines to try to get more than their share of the trade.

In the past the mines have entered into short-term arrangements to sell their products through a single company, organized and owned by the mines. Each mine has agreed to furnish a certain fraction of the world's demand to the selling company. This fraction was known as the quota of the mine. As new mines were developed, they were usually assigned a fair quota, but occasionally a new mine declined to sell in this way and sought to secure more than its fair share of the potash trade by selling independently and usually at slightly lower prices.

When the last selling agreement expired, three or four mines undertook to get contracts to supply the entire American potash trade, which is a little over one-fourth of the total potash trade of the world. Had they succeeded in filling their contracts they would, of course, have had much more than their fair share of business.

Most of the mines are owned by private stock companies, but a few of them are owned by the Prussian and other German states, not by the royal family, as has been erroneously stated in some American newspapers. Owing to the action of a few mines in trying to get more than their fair share of the business, the German government passed a law regulating the fraction or quota of the world's supply that each mine might sell, and providing that each mine should have a share in both the export and the home trade.

The law provides for a commission to enforce the law and lays a trifling tax on all the products of the mines, whether exported or used at home, to pay for the expenses of the commission. About half of this tax is to be used for publicity work to increase the potash trade, and the remainder is to be applied to meet the ordinary expenses of administration. This tax is not greater than the usual state fertilizer taxes in America, which range from 10 to 50 cents per ton, without regard to the value of the fertilizer. The German tax is fairer, however, in that it takes into account the amount of plant food in the different grades of potash compounds. The tax ranges from 16 cents per ton on kainit containing 12½ per cent potash, to 65 cents on muriate of potash. As one-half of this goes back for advertising expenses previously met by the mines, the only additional expense imposed by the new law is the trifling sum of from eight to 33 cents per ton. The tax is in no sense an export tax, but is paid on every pound of potash whether used in Germany or sent to other countries. There is in it no discrimination against America or any other country.

When we recall that the ocean freight rate on potash salts may vary as much as \$1 per ton in a single month without any increase in the cost of potash to the consumer, it is at once evident that this trifling tax for administration purposes will have no more to do with potash prices than the state tax on fertilizers in the

T. MELLSTROM, Agent.

United States has to do with the selling price of our common fertilizers.

The law, contrary to the general belief, does not require the formation of a selling company or syndicate. Each mine is free to sell its share of export and domestic as it sees fit, but it must not sell for export at a less price than is charged to German buyers. There is certainly nothing in this to give the American farmer who buys potash any cause for alarm. Why, then, has our state department been urged to protest so vigorously against the passage of this law? Why have we been told that the law means we must pay \$20 more per ton for all our potash salts? The law provides that if any mine shall sell more than its assigned fair share it must pay on the excess over its lawful share a much higher tax, ranging from about \$2.70-\$19.50 per ton. This will, of course, serve to restrict the mines to the legal quota of each. But there is no intention of restricting the total production of potash. On the other hand, the publicity provisions are intended to increase the consumption.

The American fertilizer companies sought to get control of all the potash coming to America. They failed to do it. They never intended that the farmer should get potash salts direct from them, and they insisted that the Germans should sell only to these companies, and that the German kali works, which is the American company representing the potash mines, should cease to sell to mixers, dealers and farmers.

The German kali works was organized for the purpose of getting potash to the farmers, local dealers and mix-

tilizer manufacturers to sell it to them at fair prices. The fertilizer manufacturers do not want the farmers to secure potash except in the form of mixed goods containing about 98 pounds of phosphate and filler to about two pounds of potash salts. Home mixing gives the fertilizer manufacturer nervous chills. It means the farmer may buy raw material, compound his filler-free fertilizer at a marked saving, and, worst of all, he will begin to figure on the money he has been paying out for filler and freight on it, not a penny of which was of any value in increasing his crop.

The American fertilizer manufacturers have claimed for years that they sought uniform prices for potash rather than low prices. The new law gives every buyer the same price. But their strenuous objections prove what many already knew, that the large manufacturer does not want the mixer, local dealer or farmer to buy potash at all except in the form of filler-loaded mixtures which place the cost of plant food much higher than it can be sold for in raw materials.—Country Gentleman.

### Chicago Notes.

Bassett & Washburn have long been famed for the high quality of their summer roses, which are grown in solid beds on purpose for the hot weather trade. Kaiserin, American Beauty, Rhea Reid and My Maryland are the specialties this year and the quality of the flowers now coming in is such as will enhance the reputation of the firm. Several shipments are made every day, thus insuring the stock being always in fresh condition.

Sam Murray, of Kansas City, Mo., has been in the city this week looking up fixtures for his new store at 913 Grand avenue. Mr. Murray has been connected with the old location for 21 years. He went from St. Joseph, Mo., and was secretary of the Probst Floral Co. until about 14 years ago, when he took the business in his own name and has run it successfully since. He reports business as very good.

John and Charles Marks, 4827 Warwick avenue, have recently built a new greenhouse, 25x150 feet. Dan Gates, 2628 Winona street, had charge of the work. The new house, includ-

ing boiler and stack, cost them \$2,300. Wm. Marks, who runs the florist department at Wiebold's, Milwaukee avenue, reports business very quiet.

F. W. Timme, 4016 North Forty-second court, has sold his entire stock of pot plants. The only plants he has on hand are the asters, which have been planted outside. Mr. Timme has been helping about the houses this spring, having recovered somewhat from his recent illness.

Wm. Michie on Tuesday left for Ardsley, N. Y., where he will spend the next month visiting his friends and relatives. Mr. Michie has resigned his position as gardener at Riverside park, where he has been in charge for the past four years.

M. Winandy & Son are building seven new greenhouses for Paul Thell, Pingree street. Work will be completed about July 15. The contract calls for \$8,500. Mr. Winandy stated that there will be 10,000 square feet of glass in the new houses.

Newton Badger, formerly with Crabb & Hunter, Grand Rapids, Mich., is now in the employ of Peter Reinberg, having charge of an American Beauty section. Mr. Badger resigned his position with Crabb & Hunter on account of illness.

Theodore Fehrmann, North Forty-ninth avenue, recently completed the erection of a new house, 27x200 feet. Mr. Fehrmann had charge of the work himself and the new house cost him \$2,260 complete.

S. Serafino has leased the J. F. Potocka place, 3442 Lowell avenue. He reports business very good and is now busy with the outside stock.

Teofil Grobowski, 4523 Addison street, has been enlarging his greenhouses from year to year and now has about 1,500 feet of glass.

Anton Belmont, 3706 W. Twenty-sixth street, intends to build a new greenhouse in the near future at Brookfield.

At the J. B. Deamud Co.'s store fine peonies are now being shown, also

## King Iron Frame Greenhouses

"Ask the Man Who Has One."

Robert Scott &amp; Son, who have a range of King Iron Frame Houses, write as follows:

SHARON HILL, PA., Feb. 7, 1910.

Gentlemen:—

I am very much pleased with the five houses of the King Iron Frame Construction that we put up last fall. They are strong and light and we think so well of them that when we build again that is the construction we shall use. We are planting this section in concrete solid beds and if you are near Philadelphia in May and you can call on us, we think you will tell us that it is a good advertisement for your Iron Frame Construction in this part of the country.

Yours very truly

ROBERT SCOTT & SON, (Signed)  
Alexander B. Scott.

Messrs. Scott &amp; Son have recently placed with us an order for another large addition to their plant.

Send for Bulletin No. 35 which describes

The King Iron Frame Construction.

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

Talked with a brother florist who uses Morehead Return Steam Traps?  
If not, do so at first opportunity and be convinced that you must install one at once.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

### Toronto.

Business is good, considerably better than in former years at this time, and a good supply of stock in all grades is coming in. While the warmer weather has had the effect of taking off the first quality of roses, they are still good enough for ordinary purposes; carnations have increased in numbers, but the quality is also coming down. Lily of the valley, orchids and sweet peas are fine. The peony season is now on in full swing and the flowers are certainly elegant though too plentiful to be of much value to the grower. The increased acreage of these has been so rapid that the market is not large enough to consume the enormous cut and they are sold much below their real value. The varieties coming in the early part of June, though often of the cheaper sorts, are much more profitable than the better mid-season varieties, and they kept much better than do those at present during this hot spell. Weddings are about over and there is not much demand for decorative flowers. Outdoor sweet peas are now plentiful and of good quality and with Shasta daisies and numerous other good perennials there is a plentiful variety to choose from.

American Beauty and Mrs. Jardine roses have done so poorly the last season that the growers have reduced their planting of these varieties to a considerable extent, while the space devoted to White Killarney and Richmond is being increased. Carnations are doing well in the fields and the plants have already attained a good size.

The Horticultural Society held a spring show in Allan gardens, and a very creditable lot of herbaceous stock was shown. The show was a few days too early for peonies, but other varieties left little to be desired. From the interest taken by the amateurs it looks as if this will be an annual affair.

Grobba & Wandrey are cutting quantities of Spanish iris. Mrs. Grobba and her two sons are sailing for Europe, July 5. Miss Watson, bookkeeper at Dunlop's, accompanies them.

## Why W. W. Hannell Goes on Building Our Houses

When the ad. man on a hot day last week dropped off a Watervliet car near Troy, N. Y., and found he had a couple of miles to lug his camera along a dusty road he felt a wee bit disgruntled, but when he reached Mr. Hannell's and heard him crack up the L. & B. Pipe Frame House, he turned into a regular Sunny Jim.

It seems Mr. Hannell's first houses, put up years ago, were our Pipe Frame Construction, as is his new one just going up. After saying many good things about the minor points of the construction he spoke of the first houses he put up, with locust posts, and that although many of those posts have rotted off, so far as he can see, the houses have not budged an inch, because the pipe frame has supported and tied the roof and entire house together, independent of the side posts.

"Give me a house with columns," he said, "and then I know it will stand up. Don't tell me it is safe to depend on only a network of overhead wiring and 2-inch pipe side posts to hold a house up. What is going to happen when those side posts become weakened by rust and the entire support of that immense roof depends solely on them? No, let my neighbor take such risks if he wants to; I haven't money to spend that way."

You see, Mr. Hannell knows what he is talking about—and we know what we are doing in refusing to omit the necessary columns to make a safe and sure house. Look this construction up carefully in the 1910 edition of the Handy Hand Book—then look us up.

Thos. Manton is still cutting good Cattleya Mossiae and Harrisonae: of the latter variety there is not a month in the year when he does not have flowers to cut.

Visitors: Frank Smith, of the Connors Floral Co., Hamilton; J. L. Orlowski, Berlin; Wm. Fendley, Brampton; A. Greenlaw, of McCarthy's, Boston, Mass. H. G. D.

### Cut Flowers for Early Summer.

The demand for cut flowers in quantity has led to a largely increased home growth and immensely increased importations, and they make their appearance in different species and varieties with such regularity that one can almost tell the months by the flowers. As a purely outside flower, the daffodil, from Golden Spur to the May flowering poeticus, claims precedence of everything for nearly two months. Home grown roses and carnations, foreign mimosa, and anemones all find purchasers, but as an all-round or everybody's flower, the daffodil is pre-eminent, and, when the charming introductions of later years have become cheaper, and can be largely grown, we shall have an infinite variety. The later daffodils are still on hand when other flowers begin to appear in quantity, in the shape of Spanish irises and the early flowering gladioli, both of which are very popular. Winter protection to keep frost out of the ground, and also to keep off spring frost, will advance the flowering a couple of weeks, so that, as stated above, they hit the season by the time the daffodils are over. There are some very beautiful flowers in the newer sorts.

Besides frame culture for early work, a portion of a fairly warm border can be planted with them, and they will be over soon enough for the July sowing of carrots or the August cabbage. Peach Blossom is the earliest of the gladioli after Colvillei and its varieties; it is a dwarfier habit than most, but a beautiful flower. Both the iris and gladiolus will do well in any ordinary deep, well worked garden soil, and batches for later cutting can be planted in beds among azaleas and other plants of similar nature if space permits. Next to the above, the most popular flower for vases at present (June 1) is the single pyrethrum, of which in named sorts Hamlet (pink), James Kelway (scarlet), Mrs. Bateman Brown (crimson), and Princess Marie (white) are some of the best and most distinct. Readers who would prefer to raise their own should get a packet of seed from a good firm, and sow at once in boxes in rather fine soil. Put the seedlings out in prepared beds as soon as they are large enough, and select the best flowers and colors for permanent planting. Clear, distinct shades and well shaped flowers should have prior claim to size in such decision.—Gardening Illustrated.

### The Gardener.

A real gardener is, as all the world knows, a most honest man. One thinks of him instinctively as going to church of Sunday, his wife by his side, and a rosy tail of little offshoots following happily behind. There is a Clove pink in the buttonhole of his best coat, and a sprig of citronella decorates the family hymn-book. One allows him a glass of something-and-water now and then to keep out the damp, but for generosity—within discreet bounds, for truthfulness—except under great provocation—and for open-mindedness—except on subjects on which he knows that his opinions cannot be bettered—a gardener is an honest man. It is because of our faith in him that we accept this picture of a rose bush whereon petal touches petal from root to crown; that we believe in his bed of pansies,

## The Superior Standard

### RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.

$\frac{2}{3}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market

MADE IN NINE (9) SIZES FOR HOT WATER.

Send for catalogue and list of growers that are using this boiler.

THE SUPERIOR MACHINE & BOILER WORKS, 840-850 Superior St., Chicago.

An important business change was made, June 20, in which Mills the Florist, Inc., and the Jacksonville Floral Co. are directly interested. It was an exchange of properties, the transaction involving approximately \$15,000. By the new arrangement, the Mills company takes over the greenhouse property at Greenwood cemetery, of the Jacksonville Floral Co., and the latter takes over the greenhouse property at Oak and Osceola streets, Riverside, of the Mills Co.

The reason for the exchange is given by C. D. Mills, president of Mills, the Florist, Inc., as being a matter of convenience, and for his company to have control of all the cemetery work

**The "Meyer Green Silkaline"**

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also **Violet Thread** for tying up Violets. Price of both, \$1.25 per lb.

For sale by all first-class supply houses. If your dealer does not carry it in stock, write us direct, giving us his name.

**JOHN C. MEYER & CO., 1449 Middlesex St., Lowell, Mass.**

**The Mastin Automatic Whitewash and Spraying Machine  
Is Reliable, Practical and Durable**

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our **Extension Hose, Extension Rods,**

and the **Mastin Whitewash Nozzle** for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

The floral trade of the past week was boosted considerably by the military tournament which extended from June 16-25. The first function was held on the Sunday, and throughout the week they followed thick and fast. Nearly all of the most popular and beautiful young ladies were interested as sponsors or maids of honor, and the gallant soldier lads could but send them flowers of the finest and most costly kind. Two grand military balls added to the demand. The call was for the most part for American Beauty. The Joy Floral Co. had fine Beauties and plenty of them and had good sales every day, but they were short on pink roses. The maid of honor in chief had sent her from Joy's one bouquet of four dozen Beauties, all fine large ones, and daily many smaller bouquets. The retail stores have the real summer look since the hot weather of the last few days, and flowers are not plentiful. Carnations are entirely done and fringed white petunias are being used as a substitute in funeral work. Asters are coming in and promise well. There is still some lily of the valley and *Lilium speciosum* is coming in very handily, while gladioli still holds its own. The military tournament was the last event of any importance, to arouse any interest and everything will be very quiet now. The long-delayed hot weather seems determined to make up on intensity for lost time. The city will be deserted by all but the "cant-get-aways" who are not great on flower buying, and the usual dullness will prevail in floral circles as elsewhere. M. C. D.

Lincoln, Ill.

Gullett & Sons have torn down the old greenhouses extending from the office in Tremont street to Logan street and in their place three larger, modern houses are to be built. The old houses have been up about 15 years, the new ones will be higher, lighter and more up-to-date in all particulars. The walls will be of concrete blocks on a solid concrete foundation, four feet of concrete and three of glass. The frame work will be of iron 27 feet wide and 16 feet to the ridge. With these houses finished more than two-thirds of the entire Gullett plant will have been rebuilt during the last six years.

## It Saves Coal

**T**his boiler will give you plenty of heat and will burn but little fuel. Three times the length and twice across the boiler the fire travels, and the flue ways are large and roomy. Easy to clean and keep clean. Insures good draft.

902 E. Blackhawk St., CHICAGO.

### What?

What is the use of theorizing on theories when you have coal facts right before you?

When a boiler has proven itself every way satisfactory in doing certain kinds of greenhouse heating—and has proven over and over again its great economy for such work what is the use of arguing the question and trying to get a man to buy any but the Corrugated Boiler when it's the Corrugated Boiler he wants?

We don't. Everyone gets the one that he wants, and this Corrugated has a host of friends.

We took one out a couple of weeks ago that had been doing steady duty for thirty-three years. Can you beat that?

Kew's New Forestry Museum.

Cambridge Cottage, formerly the residence of the late Duke of Cambridge, was on June 1 opened to the public for the first time. On the death of the duke in 1904 his late Majesty King Edward VII. gave over to the public the grounds, to be added to the royal gardens from which they have access, and the building is to be used as a museum illustrative of British forestry, says the Journal of Horticulture. The structure is an unpretentious brick building, partly two, and the remainder three, stories high. The exterior, largely covered with ivy, Magnolia grandiflora, and roses, remains unaltered. The interior, has been remodeled. Three rooms and a corridor on the ground floor are at present open to the public. The largest room is about 48x60 feet. In this are shown trunks, planks, and cross sections of many trees grown in this country. As it is only rather more than a year ago that the building became available to the museum department, the officials have had very little time to get together a representative collection. Now, however, that such a museum has been started, we feel sure that plenty of suitable material will soon be forthcoming from estate owners in various parts of the country. The second room, about 36x60 feet, contains four large glass cases in the center, filled with

## HALF HOUR CHAPTERS FOR PLANT GROWERS

### Poinsettias.

The more we have to do with the culture of poinsettias in pots the more we are of the opinion that one of the most important points of their culture is to see that they are kept growing steadily and hard from the beginning. Just as soon as they are well rooted they should be taken from the propagating cases and potted and when established given a place in a house where they can have plenty of light and air around them at all times. In a shady, moist house they begin to run quickly and the growth is poor and soft though rapid while those grown with only just sufficient shade to prevent injury to the foliage are solid and stocky right through. Of course, just in the earliest stages they are tender and want nursing and it would be unwise to expose them directly to the drier, more airy conditions of the growing house or frame, but do it gradually and they will be all right. By this we mean that when first taken out of the moister propagating quarters they should be arranged so that they can be sprayed easily and freely between the pots and a fair amount of shade given. This will have to be reduced by degrees until the plants are so conditioned that they can stand almost full exposure to the sun, just a little lime or whitening on the glass or a roll of muslin being all the shading necessary.

### Celosia Pyramidalis.

As the plants of *Celosia pyramidalis* come in line for final potting, see that they are all perfect and do not waste time potting those that have fasciated stems. This is one of the most sportive subjects in cultivation and one never knows what the plants are going to do next in the way of unnatural or abnormal growth. The proper place for the plants now is a light frame where they may be kept fairly close to the glass and given plenty of air, only enough shading being allowed to prevent the foliage burning. Give the plants a fair distance apart in order that spraying be-

tween the pots can be easily done. The soil for *Celosia pyramidalis* should be moderately light loam with a liberal addition of well dried cow manure and sand. The plants should be potted only moderately firm, not too hard, as the idea is to promote a fairly quick growth and a loose pyramidal habit. Keep the plants lightly sprayed daily until the color of the plumes shows when the spraying must be discontinued.

### Small Decorative Stock.

The additional room at command at this time of year allows of the preparation of plenty of small plants that will be useful for decoration around Christmas. Small ferns can be potted out of flats in any quantity desired. There is a great variety and they are among the most easily grown plants for the purpose. A good stock should be worked up now and if the requisite seedlings are not on hand they should be purchased. It is no use leaving the houses empty. Growth made now is made without any expense for fuel and the profit is that much more. Another useful plant for late fall and winter decoration is *Grevillea robusta*. Its pretty fern like foliage is fine for use in fern dishes and seedlings now being potted off make elegant little specimens in 3-inch pots by that time. It is not too late to sow even yet, in fact this little plant is so useful that it should be sown two or three times throughout the year. *Dracenas* in all sizes should be spaced out and given room enough to grow, a moderately shaded house suiting them best. Pot on any that need it and see that they do not go out of cultivation. *Crotons* in all sizes should be potted if they need this attention and set going. Old specimens cut back for propagating in early spring should be starting to grow now and may be shaken out and potted into one size smaller than the pots they are growing in. *Crotons* one and all delight in bright, strong, sunlight, the atmosphere around them being tempered by plenty of moisture.

When newly potted a little shading will be necessary but established plants do best in full sun. There are many other small decorative subjects, such as marantas, foliage begonias, tradescantias and panicums stock of all of which can be hastened along now with ease and it is much better to get at them now than have to buy from other growers when needing them later on.

#### Fuchsias.

It is difficult to account for the almost utter neglect into which the fuchsia has fallen of late years when one considers what an easily grown and beautiful plant it is. It will probably be never very largely grown in the big plant growing establishments that depend upon the shipping trade to distant points, for they are not easy plants to pack when covered in flower, but there is nothing to prevent the man who grows for his own retail trade growing a few hundred and that they would sell at a fair figure does not admit of doubt. Their culture is easy and for the greater part of the growing season they are independent of fire heat, so would not cost much to grow. A few old stock plants can be kept under the benches or in any out of the way place where frost does not reach them and these will provide all the cuttings needed. These should be rooted in February in a cool propagating bed. Heat is bad for the fuchsia at any stage of the game, it being almost a hardy plant and, unlike some hardy subjects, objecting strongly to forcing tactics. The young stock needs only to be grown on in a cool, moist house or frame, kept potted on as becomes necessary and all flowers nipped out as they appear until about a month before the plants are needed in flower. The naturally grown pyramid shape of plant is by far the most graceful but most people desire the bush form and this is grown by pinching the shoots regularly every three or four weeks until the necessary number of shoots is produced.

#### Cinerarias.

There is often a good demand for early cinerarias, and when this is likely to occur seed may be sown now. The one leading point in cineraria culture that should be kept in mind by growers is always to maintain a cool, moist and airy atmosphere around the plants. Without this they can never be a success, but given this all the rest is easy. We always drain the seed pans or flats for cinerarias with special care and over this place a light sandy mixture that has been passed through a half-inch sieve. Give the pans or flats a thorough soaking of water and allow a little of this to drain away. Then sow thinly and cover the seed with about an eighth of an inch or less of fine, dry, sandy soil. Cover with a sheet of glass to conserve the moisture and this again with paper or moss, unless the house or frame, in which they are placed is well shaded. Watch carefully after about nine days, and as soon as the seed germinates remove the shading and place the pans in a shaded cool frame.

## THE RETAIL TRADE

THE custom of carrying a bouquet of flowers in automobiles has been revived in England, showing, says a trade paper, that "there is a slight relaxation in the outward and visible signs of national mourning."

#### Can It Be Done?

It should be the aim of every retail florist to make a careful study of the economic conditions at present confronting dealers in flowers with a view to recommending a commission to make a regular price for each and every design whether for funerals or otherwise, which each man in the

Standing Wreath of Orchids (Dendrobiums) and Lily of the Valley With Orchid Ribbon. Base Easter Lilies and Leucothoe.—By Young & Nugent, New York.

trade should follow, making such changes from time to time as will enable the retailer to meet his increased selling expense and at the same time dispose of his goods at a net profit.

An exhaustive study of the average expense of doing business in the different lines connected with the flower trade should be made. Men of wide experience and recognized standing should be chosen and the work should be very carefully and methodically done along conservative lines with the approval and assistance of all retailers of flowers. Also—with a view to bringing the results of work of this kind to the attention of the largest number of influential florists—a circular should be issued to all in the trade asking their co-operation.

Many mistakes are made by people in the retail flower trade. This was

particularly noticeable in a recent newspaper advertisement where one large house of excellent reputation and standing advertised funeral designs from \$3 up. All who have handled this class of work and who do work of merit in this line know that it would be the highest degree of folly to attempt to make anything worthy of the name of a funeral design with its frame, flowers, workmanship and store expense percentage added that could be retailed at a profit for the low figure of \$3.

If a national florist commission could be established to which each and every one would give their staunch support, it would soon eliminate the ruinous price-cutting now in vogue which, in the long run, must ruin the profit-taking and bring it down to a very low standard and in the hands of a foreign element who stop at nothing and still live because they can live on nothing. In this day of evolution in prices some of our staunch followers in the trade should put their heads together and form a league whereby all future mistakes and ruinous business principles will be eliminated.

It is certain that all florists who have the interest of their trade at heart will be in a receptive mood for a movement of this kind and willing to be guided by a schedule of prices that should be carefully and consistently worked out. The time is ripe just now for just such a movement. Let us hope the work will be started before long out of justice to those whose interests should be protected. Let us do it now. A. E. KLUNDER.

#### July Flowers in the New York Stores.

When a celebrated and lamented poet wrote of "the melancholy days, the saddest of the years," he was not thinking of the florists. A cynical buyer would probably say that the poet's mind was on higher themes. However, the foregoing lines are now very applicable to the present condition of business. But this article will deal with the flowers that are in sight, and, so far as the growers, wholesalers, retailers and the general florists are concerned, we will leave it to them to fight it out and it will probably take them all summer to do it.

The cool and dark weather of June kept greenhouse stock in very fair condition, consequently particularly in the case of American Beauty roses and carnations, better stock is now seen in the stores than might be expected at this season. In a great city like this, it calls for considerable inquiry and discernment to learn the exact condition of the retail trade. While the wealthy residents have, as a rule, closed their homes for the summer and are sojourning elsewhere, it must be readily understood that the steamer and hotel trade, funeral work and the bunches bought by God's plain people, call for a large amount of stock. If this was not a fact, many dealers would be put out of business.

Some of the retailers say that roses and carnations are always the best sellers; that may be true with certain lines of trade, but particularly in the case of roses there is room for qualification. Good pink and white roses, par-

ticularly Killarney, White Killarney and Kaiserin are always to a certain extent in demand, and always to be found, but Richmond, which is practically the only red greenhouse rose that reaches this market, is a dead one for the summer. It is now practically worthless and it does not appear that any number of people would want it if it was good. A noteworthy feature at the present time is the popularity of the cut blooms of Dorothy Perkins. They are sold wholesale in bunches of about one dozen sprays and a buyer of long experience recently stated that he considered them the "prettiest things on the market." Crimson Rambler is also being sold in the same way but Perkins surpasses them in popularity.

We have always been very friendly to the carnation, when it showed any merit. As an old timer in the business recently said, "there are carnations and carnations," but so far as we can observe, some of the old varieties stand the stress and heat of summer much better than the much vaunted new ones. While we may be ridiculed for saying so, Genevieve Lord, as a good pink, seems to hold its own with any of them. Orchids are plentiful and good enough, but as a rule the orchid fanciers and buyers are in Europe, or other places remote from this busy mart of trade, consequently the orchids have to take their chances with the balance of the surplus. Gardenias are over plentiful. They are not summer flowers and we have grave doubts as to whether they ever will be. There are several reasons for this. Their quality deteriorates with hot weather. They are essentially flowers for the well to do classes, who are not now here and their odor is so oppressive that they are not acceptable for funeral work.

Lilies and lily of the valley are at all times acceptable but both are in surplus at the present time. The water lilies are now appearing, being chiefly useful for display in miniature lakes and ponds in the show windows. Some of the retailers have the habit of calling everything a spring flower that has not been grown under glass. As this is summer and a hot one at that, we prefer to write summer flowers. Well, there are plenty of them, more in fact than there is any use for. While many sweet peas are sold, some of them at ridiculously low prices, there is always a surplus. It would be better for all concerned if one-third of the summer stock that is dumped on this market was thrown away in the field. We have iris, phlox, feverfew and various other stocks in great variety. We do not know that anybody is making any money out of them but they look pretty in the store windows.

SPRINGFIELD, ILL.—The building in which A. C. Brown has his store is to be completely remodeled.

YOUNGSTOWN, O.—Mrs. M. S. Geng, wife of Gus Geng, died at her home on Livingston street, June 27, of a complication of ills, at the age of 42. Mrs. Geng was a charitable woman, a devoted wife and mother and Mr. Geng has the sympathy of all in his hour of trial.

## THE CARNATION.

### Carnation Culture Under Glass.

Planting in the houses may be done from June to October, the earliest plantings being from pot-grown stock. Probably the best time for housing the plants from the field, said W. T. Bell in a paper read at the convention of the American Carnation So-

benches or beds, are well expended. Sods and the top soil from an old loamy pasture field, cut three or four inches thick, and piled with one-fourth of their bulk of clean cattle manure a sufficient length of time before using to attain the proper condition when sliced down and thoroughly mixed, and having a small quantity of air slacked lime incorporated with it, forms an ideal compost.

WREATH BY JOHN MANGEL, CHICAGO.

Foundation of Galax, with White Sweet Peas and Mrs. Jardine Roses.

ciety at Pittsburg, January 26-27, 1910, is August, and early September. The beds or benches should be of convenient width to work over; say not to exceed five feet, where there are walks on both sides, and not more than three feet for side benches.

#### BEDS VS. BENCHES.

Both low beds and raised benches have their advocates, and good flowers may be grown with either system of cultivation. Ground beds are cheaply made, and, if furnished with cement or brick walls, are durable, but should always have provision for sufficient drainage while raised benches, although more expensive to make and requiring frequent renewal, are more convenient to plant, weed, stake and spray than the low beds are. Each grower should test both plans and decide for himself, after a sufficient trial, which he will adopt. Possibly, as some have already done, he will use both.

#### THE SOIL QUESTION.

While, with proper attention in other respects, carnations may be grown fairly well in soils that vary greatly in quality, still the time and cost required to procure and prepare the best quality of soil for use on the

The bottom and side boards of the raised benches that will come in contact with the soil should, before filling, be thoroughly coated with whitewash made from freshly slacked lime, and having a small quantity of sulphur added. Five inches of soil, prepared as directed, is sufficient for the raised benches.

#### LIFTING AND PLANTING.

In digging the plants in the field, a reasonable amount of soil should be left attached to the roots, if possible, and they should be carried and handled so carefully that this soil will not be shaken from them. Contrary to what the novice might expect, the best results in transplanting will be obtained if the soil in the field is dry when the plants are dug, rather than if it is wet. The plants should be transferred to the benches as promptly as possible after digging so that the roots may not become dry.

Probably a majority of planters firm the soil around the newly-set plants by pounding it with the closed fist; but as this firming is an important part of the planting operation, a better plan is to use a brick, hammer, or something similar, as a tamper for the purpose. Care should be taken not to set the plants any

deeper in the soil on the benches than they were growing in the field.

#### SPRAYING.

After a few feet of bench has been planted, the soil and plants should be gently but thoroughly dampened, by using the fine spray rose on the nozzle of the hose and, if the sun is shining on the benches, the plants should be lightly sprayed again after the foliage has become dry. The spraying should be repeated on bright days as often as may be necessary so as, if possible, to avoid shading the glass.

there is nothing better than cattle manure. This must be applied in combination with good judgment; and neither too strong nor too frequently.

#### WATERING.

The most important detail connected with the cultivation of carnations is the watering and the most common failure in this respect is in allowing the soil to become too dry, even to the extent of causing the plants to droop and wilt. The soil on the carnation benches should always be slightly moist; but should never be watered when saturated.

matters of temperature and moisture, find their stock practically free from disease.

#### HOUSES FOR CARNATIONS.

In regard to the style and size of houses for the proper cultivation of carnations, ideas differ and will continue to do so although, at present, the tendency seems to be in favor of longer and wider houses. But some of the finest carnation flowers that have ever been produced were grown in narrow houses, so narrow indeed that in some cases they were wide enough for but one narrow bench, but the man who grew them, was careful not to allow the ventilating sash to remain unopened during the whole of a bright sunny day, nor to neglect the watering until the plants hung their heads from thirst. While good-sized houses, well lighted and conveniently arranged, are very desirable, success does not depend so much on the style of house, as on the style of men in charge of it. Houses 300 feet in length should be long enough for any reasonable man, and equal span houses running north and south, do very well for growing carnations in

#### VARIETIES.

The number of varieties that are grown with profit at the present time, is so great, and is being so persistently added to, that it seems unnecessary to specify them, or to say which are the most profitable; and the beginner in the business will do best to consult some successful grower on this point, and, after having had some experience, to add to his stock, for the purpose of testing, some of the most promising of the new introductions, and retain those that prove to be desirable.

#### RAISING NEW KINDS.

Notwithstanding the very many fine sorts that are now cultivated, better kinds than are now in existence, will be warmly welcomed when they appear, as they undoubtedly will; and this prospect opens a new field to the thoughtful carnation grower, the production of new varieties. He may be fortunate enough to have a sport or variation from an existing kind originate on his premises, which is a short cut to the point aimed at, for which

THE PORTLAND ROSE FESTIVAL.

Fireman's Ladder Truck Wreathed with Roses.

After the plants have become somewhat established, they should be dusted with air slaked lime. As soon as convenient they should be furnished with the galvanized wire supports, to be lengthened as needed. These, although more expensive, are neater and better than strings stretched between the rows, a plan in common use.

Carnation houses should be freely ventilated whenever the weather will permit; and fumigation and spraying, for aphids and red spider, must not be neglected. Weeds should not be allowed to grow, and the surface of the soil should be stirred frequently, when in the proper condition, but not so deeply as to injure the roots of the plants.

#### DISBUDDING.

As soon as the flower buds are of sufficient size to handle, disbudding should be commenced, and continued persistently throughout the season. In disbudding carnations, it will be found best to begin at the top of each stem; so that if by accident the terminal bud is broken off, one of the buds lower down may be left to take its place. On account of differences in habit of growth, certain kinds can be disbudded much more easily than others. Among the kinds that require most time, because of the very numerous buds and side shoots, are Beacon, O. P. Bassett and Georgia; and among those that can be disbudded much more quickly are Harvard, Victory and White Perfection.

After the soil has become filled with roots, the application of additional fertilizing material may be made either pulverized cattle or sheep manure, to be stirred into the soil, or liquid fertilizer, for the making of which

#### DISEASES.

But little need be said now concerning the filthy carnation rust that caused so much trouble and dread a few years since, nor indeed of the various other fungoid diseases to which the plant is subject, because, if intelligent care and attention are given to the propagation and culture of the plants, but little trouble will be experienced from any of these diseases; and this applies as well to the case of other florist's plants. Those who complain so much of disease in their stock of forcing lilies, and lay the blame on the men who grow the bulbs would, if they gave more care to the plants, and especially in the

THE PORTLAND ROSE FESTIVAL.

Decorated Suburban Float.

he will deserve no particular credit but from which, if is a decided improvement in color, size or habit over those now grown, he may derive a considerable profit.

#### CROSS FERTILIZATION.

The most promising way to proceed, as well as the most interesting, is to resort to cross-fertilization, usually

#### The Portland Rose Festival.

The fourth annual celebration of the Portland (Ore.) rose festival occurred this year from June 7-11, and was an unequaled success from beginning to end. This festival has become the principal holiday event of the year to thousands of citizens of the Pacific coast states, and this year visitors

elaborately decorated and at night presented a brilliant attraction. The appearance of some of the leading hotels, banks and skyscrapers were in many instances unique and striking.

One of the chief attractions during this holiday week was, and always has been, the rose show, held under the auspices of the Portland Rose Society. This year was no exception to the success, which has in every instance attended this event. It was held in the armory, a building occupying a full city block, 200x200 feet. The immense interior was taken charge of by a committee of ladies, and under their tasteful industry became a veritable bower of roses, millions of blooms being used in its decoration. The competitive exhibits of roses were in many cases wonderful in the quality and texture of their individual flowers. More than 300 entries were made.

A new feature was this year added to the competitions. The city was divided into 12 districts, each of which devoted the large space allotted to it to a competitive decorative exhibition for the district prize offered by the Rose Festival Association for the best display in this class. Many individual exhibits were made in boxes, practically under the rules and regulations obtaining at the rose shows of The National Rose Society of England. Several of these were equal, if not superior, to the best that can be seen at that great national event of the rose loving world. The bulk of the exhibits were, however, displayed in vases, and the size, quality and beauty of these won the admiration of the 75,000 people who visited the rose show on the two days during which it was open to the public.

Sixty-four trophies and prizes were offered and awarded by the Rose Festival Association for competition in this event. At this rose show, there are always three judges, one of whom must be a resident of Portland, and the others strangers to the city. This year for the third consecutive time, W. S. Sibson, proprietor of The Sibson Rose Nurseries, was the Portland judge; Roland G. Gamwell, president of the Bellingham Rose Society, and

THE PORTLAND ROSE FESTIVAL.

Decorated Automobile in Parade.

called hybridizing, which term is in this instance incorrect, as a hybrid is the result of a cross between different species of the same genus, while the various kinds of carnations, as we grow them, are simply different varieties of the same species. The grower will select for his experiments in cross-breeding, parent kinds that seem to combine the qualities he desires in the looked-for progeny and after growing and testing a few thousand seedlings, he may be rewarded by the production of a prodigy which may indeed result from the very first pod of seed produced and, when he has bestowed on it a plain short name, somewhat descriptive, if possible, and sold the stock, or a portion of it, for \$10,000, be the same more or less, he will probably feel repaid for the time and trouble expended on its production, while if his efforts do not result so profitably, he will at least, be repaid, in a measure, by the interesting experience he has had.

The intelligent, observant, and careful grower of carnations, will soon be able to distinguish the different varieties he cultivates from each other by inspection guided by differences in appearance and habit, that cannot be described in words and, possessing this faculty, if mixtures occur in his stock, as they may, he will be able to identify and name the interlopers. He will find the work, in its variety, both healthful and interesting; and, if located within reach of a good market, profitable as well. He may also, as a result of experiments, discover some improved methods in the culture and care of his stock, that will be of general interest and benefit; and having done so, will of course report the same to the American Carnation Society.

were numerous from all over the United States and Canada. The hotel accommodation of the city was taxed to its utmost capacity; in fact, it was almost impossible for those who came without reservations to secure rooms.

The day of the first parade, 327,000 people were carried by the street car company, and in the five days of the festival, the company reported its traffic as numbering nearly 1,700,000 passengers. During the parades, which have become famous for their novelty and beauty, the streets were thronged with sight-seers. It was estimated that about 400,000 people witnessed each of these leading events. The principal streets of the city were

THE PORTLAND ROSE FESTIVAL.

Winning Flowers of Caroline Testout.

J. H. Booth, of Roseburg, Ore., completed the board.

In addition to the individual competitions of amateurs, and the district competitions above referred to, there were prizes for the best general exhibits of roses and shrubbery by nurserymen. This competition is always one of the chief decorative features of the rose show, and was this year fully up to previous standards. Clarke Bros., Portland, and the Swiss Floral Co., were the respective winners of the first and second prizes in this class. So successful and popular has this annual rose festival week become, that the citizens of Portland intend it to a permanent institution and believe that before long it will rival in importance the celebrated Mardi Gras of New Orleans. WM. S. SIMSON.

#### Burbank's Amaryllises.

The amaryllis or hippeastrum has been greatly improved in recent years, more especially by the British raisers. Of late Luther Burbank has been working upon them and our illustrations herewith show what a fine plant the amaryllis really is when well grown. The single flower shown is natural size and is described as one of the "medium sized" varieties. There are some in the collection over 12 inches across. The white and light shades are usually supposed to be the most difficult to get in good shape, but the picture of these shows that Mr. Burbank has been very successful even with these.

CUMBERLAND, MD.—Weber Bros. have closed their store here and moved to Clarksburg, W. Va.

PATERSON, N. J.—The Paterson Floral Co. suffered a loss of about \$1,500 on its stock at 304 Main street, in a fire that practically gutted the whole block and caused a total loss of over \$500,000 on the night of June 27.

#### The Spencer Type of Sweet Peas.

A paper read by W. Atlee Burpee, of Philadelphia, at the convention of the American Seed Trade Association at Atlantic City, N. J., June 21-23.

Last month on the very day that we were leaving for California I received the programme for this convention and regretted to find that your president had put me down for a paper on "The Spencer Type of Sweet Peas." I felt then that the proper preparation of a paper would be impossible, as I could only return from California a few days before your convention. However, in taking a walk in the early morning of May 31 around the village of Lompoc I was so impressed with the fact that while there were acres of the finest Spencers grown in that beautiful valley, both upon our own and other seed farms, yet nearly all the sweet peas in the village gardens were of the old grandiflora type. I determined then that if time would possibly allow before your convention I would certainly try to say something that might help increase the enthusiasm for this wonderful new race of gigantic orchid-flowered sweet peas. Returning yesterday I was pleased to find that, despite the unfavorable and backward season, most varieties of Spencers in our trials at Fordhook are now sufficiently in bloom to illustrate to all of you who may favor us with a visit on Friday the wonderful distinction of this unique type.

#### NOTES BY AN ENGLISH AUTHOR.

Last evening, in considering how I could best say anything to still further advance the growing interest in sweet peas of the Spencer type, I picked up the book about sweet peas published this year by my friend, Walter P. Wright, of England, and upon reading his introductory remarks felt that no words of mine could so well express as he has done the wondrous beauty of the seedlings of Countess Spencer. With your per-

mission, therefore, I shall first quote from Mr. Wright:

"It was Henry Eckford who made the sweet pea the great flower that it is. It was he who gave it its huge public. He delighted amateurs with new and beautiful colors and with improved form. He enlarged the flower, and added grace, substance and symmetry to it. It was loose—he gave it regularity. It was flimsy—he made it solid. It was ragged—he knit it together. The standard was badly notched—he went a great way to filling the gap up. But mark you, he did all this without robbing the flower of its fragrance. If he had done that—but why speculate? He did not; he kept it as sweet as he found it.

"Eckford did so much that there really seemed little more to do when he drew towards the close of his busy and beneficent life. But the sweet pea was never a secretive flower, and at long last, when the secret of her loves, so long held inviolable, had been wrested from her, when all about her seemed known, and when a hundred beautiful daughters surrounded her—then she laid down another card. Something came with a vengeance, but it was not the buttercup yellow, nor yet the gentian blue. It was not the development of color at all, but of form. We gasped in sheer amazement. This astonishing flower had made an absolutely new, revolutionary, cataclysmic, prestidigitatory, thaumaturgic change in the form of its standard. Left comfortably smooth and flat by Eckford, it suddenly threw a variety with a standard that was heavily waved or crinkled.

"A waved standard! And with it increased size of flower! A crinkled standard in itself might not have vanquished us, for it might have meant a flower of shriveled and meagre appearance; but Nature seemed to have resolved to carry her new sweet pea

SOME OF BURBANK'S NEWER AMARYLLIS—WHITE AND LIGHT SHADES.

BURBANK'S AMARYLLIS—A MEDIUM SIZED FLOWER.

scheme through thoroughly, and increased the material in the petal to allow for the folds. The waved flower reigns. While my pen flows along the paper in shaping these words, the thought crosses my mind: 'Has the sweet pea other revolutionary secrets in her keeping? Shall I have to modify the first sentence of this paragraph when I write an introduction to the twenty-fifth edition of the present work? I know not. All I know is that in this, the tenth year of the twentieth century, the waved sweet pea reigns. It reigns supreme, unchallenged. It has taken the sweet pea world by storm, and by the appeal of its wonderful beauty has brought thousands of new devotees into the fold. All the world yields to its beauty and grace.'

The original sweet pea of this new giant waved type was found in 1900 at Althorp Park, Northampton, Eng.,

by Silas Cole, gardener to Countess Spencer, after whom it was named. Mr. Cole seems to think it was the result of a cross of Prima Donna with another seedling made in 1899. The fact, however, that the same waved form of flower, although of smaller size (Gladys Unwin) was found by W. J. Unwin, of Histon, Cambridgeshire, Eng., and also identically the same variety as Cole's Spencer, was found in a row of Prima Donna in the gardens of Henry Eckford, would seem to prove that this new type has been entirely "created" by Nature without any immediate aid from man—a sort of natural, or rather ought I to say, unnatural, and most remarkable evolution?

My friend, Robert Sydenham, of Birmingham, Eng., purchased the original stock of Countess Spencer from Mr. Cole and sent the seed to us in 1902 to grow for him. He in-

troduced this variety in England in 1904. With his kind permission we first offered it the following year (1905) in America, and at the same time introduced also Mrs. Sydenham or Orange Countess (now known as Helen Lewis) and Florence Spencer, a selected strain of which is now known as Florence Morse Spencer. In this same season of 1905 we introduced a mixture which we called "The new race of gigantic orchid-flowered sweet pea seedlings of Countess Spencer." At the same time we had, of course, advised our friend, Mr. Sydenham, of the remarkable break in Countess Spencer and told him that in a few years from separate selections being made we hoped to have many different colors. We did not realize then how difficult it would be to fix these sports of Countess Spencer, nor in fact how much careful selection and re-selection

would be necessary to really establish even the original Countess Spencer and the other two varieties introduced that year (1905) on a basis of fixity where they could be depended upon to come true from seed.

#### SPORTIVE TENDENCIES.

The tendency of the original Countess and all her children to sport has been, however, really a blessing in disguise, for now, by careful work on the part of American and English growers, not less than 40-50 varieties have been fixed so that they come practically true from seed. None but the grower, or those in close touch with the growing of sweet peas, can have any idea, however, of the amount of patience and time involved in this selecting and re-selecting.

In the grandiflora type of sweet peas it was rarely that the same sport or seedling of the same character occurred in more than one place. The same year that Henry Eckford introduced Duchess of Sutherland we introduced Modesty, and both proved identical. The same year House & Son, of Bristol, Eng., introduced Lord Nelson we introduced Burpee's Brilliant Blue—both proved identical. The only other case of identity in new varieties of grandiflora type which I can now recall is that after introducing Aurora the next season in visiting my friend, the late Henry Eckford, at his home in Wem, he showed me where he had the same variety but had not up to that time introduced it.

The fact that frequently the same colors in Spencer have occurred simultaneously with different growers in England and in America shows almost conclusively that these were all "creations" of Nature, or sports, rather than the result of cross-breeding by man, although, of course, such new varieties were only made possible by the breaking up into different colors and advancing of the grandiflora type by the late Henry Eckford, who well deserves his imperishable fame as the "Father of Sweet Peas."

In most cases the new varieties of the Spencer type have retained the same coloring as the grandiflora varieties. For this reason and to prevent confusion we adopted the plan of giving descriptive names with the word Spencer added—as in the case of Burpee's White and Primrose Spencers, Apple Blossom Spencer, Aurora Spencer and King Edward Spencer. One illustration of the occurrence of practically the same new Spencers in England and America it might be worth while to mention. In 1903 at the luncheon given by Leonard Sutton at Reading, Eng., to the visiting members of the National Sweet Pea Society of England, in his introductory remarks he said that while the Spencer type of sweet peas was making wonderful progress he thought it would be a long while before any sweet pea could become more popular or more beautiful than that named for His Majesty King Edward VII. In replying I told Mr. Sutton and his guests that the vice-president of the society, Mr. Cuthbertson, whose gardens I had visited in Essex, and ourselves each had a Spencer form of King Edward VII ready for introduction in 1909, but that I would glad-

SWEET PEA MRS. ROUTZAHN SPENCER.

ly agree to call it King Edward Spencer. After further consultation with Mr. Cuthbertson he thought, however, that his was a little different from ours and, therefore, his firm (Dobbie & Co., of Scotland) introduced theirs the same year as The King.

#### LAST YEAR'S SPENCERS.

It is worthy of note that the varieties of Spencer sweet peas which are of the same color as existing varieties of the grandiflora type, generally come more readily true to color than do those which combine with the distinctive large waved form of the Spencers also new colorings. While King Edward Spencer and The King both came quite true from seed, yet Mrs. Routzahn, which we introduced the same year, being of an entirely new combination of colors (light apricot and straw) sported so badly that an entirely new re-selection was necessary. Similar coloring introduced in England (Mrs. Henry Bell) behaved in like manner. We have had a like experience, much to our regret, the past season. Of the four varieties introduced this season by Messrs. Morse and ourselves, Senator Spencer, Marie Corelli and W. T. Hutchins-

came quite true, while the beautiful Miriam Beaver (deep apricot and straw) has broken so completely that we shall have to withdraw this variety from sale probably for several years at least. Our trials show that new English varieties possessing new combinations of coloring sent out this season with equally good faith have also behaved in a similar manner, so that it will require considerable courage and patience to persist in re-selection and establishment of these new colors.

One word more about the curious sportive character of the Spencer type. We were very pleased with the trueness to type of the selected stocks of Spencers this season on our own farm and the farms of several other growers in Santa Barbara and Santa Clara counties, California, but noticed one of the most remarkable examples of sporting that we have ever seen. The best re-selected stock of George Herbert, in fact, a stock that originated with our friends, C. C. Morse & Co. (and to which their Chinese gardener, Henry Ohn, in his enthusiasm had given the name of James Lick), we found both growing on their

SWEET PEA ASTA OHN SPENCER.

grounds and on our own came absolutely true except for one sport and that was a white-seeded white Spencer of which there was fully 5 to 8 per cent. Examination of the seed left over from planting showed that there was not a single white seed in the lot. We have allowed a few plants of this white to stand,—marking same to see whether we should have to lose all faith in being able to tell when in bloom a white-seeded white from a black-seeded white.

With the splendid work now being done by the National Sweet Pea Society, of England, seconded by our own new American Sweet Pea Society growers generally are awakening to the fact that the fair fame of new introductions in the Spencer type rests largely with them in being able to restrain their enthusiasm for at least a year after they consider they have sufficiently established a new color ready for introduction. The seed of sweet peas of the true Spencer type can never be produced nearly so cheaply as the grandiflora type. The roguing that is necessary is not merely to remove off colors, but also to see that the type be not allowed to deteriorate to the grandiflora form.

While most free blooming the true Spencers have the unfortunate characteristic of dropping the majority of their blooms without setting pods. So noticeable is this that the Gardeners' Chronicle, of London, last September, said, "It would not be an exaggeration to say that some of the choicest Spencers do not yield a tenth of what the old varieties do, and this in a favorable season."

If the Spencer type of sweet pea is to maintain and extend its present popularity, growers generally must aim at quality and be satisfied with a much smaller quantity of seed from a given area than has ever been recognized as a good crop of the older types. This paper is already longer than intended and I shall not attempt, therefore, to enter into any description as to the different varieties of Spencers, but shall have a number of assistants with "finders" in our trials at Fordhook when we have the pleasure of your visit on Friday, while I shall have there also several hundred copies of our little book, "Sweet Peas Up to Date," in which all those who are interested can check the varieties that appeal most pleasingly to each.

### Garden Roses.

A paper read by Alex Cumming, Jr., at the meeting of the Hartford (Conn.) Horticultural Society, June 24.

Although the rose family includes over 40 distinct classes, the types most common and desirable to the average garden are the hybrid perpetual or remontant section, the tea scented and hybrid tea, the climbing and dwarf polyantha and the hybrid Wichurajana section. The hybrid perpetual or remontant section is not, as the name would imply, perpetual as a class, but during the rose month it predominates among all the other classes. Many of the varieties, especially those of more recent introduction, bloom more or less freely during the autumn months, attaining a perfection at that time which makes them particularly useful for cutting purposes. The varieties, Mrs. John Laing, a soft pink, and Oscar Cordel, bright carmine, are among those that, during the autumn, will produce flowers on stems ranging from two to six feet. This hybrid perpetual section is also the hardiest of the garden roses, and will carry over our severe winters with a slight protection. Altogether this is still the best type of rose for the garden.

### VARIETIES.

The following varieties have proved the best in their colors after a thorough test: Crimson shades—Fisher Holmes, Jubilee, Prince Camille de Rohan, General Jacqueminot and Louis Van Houtte. Red—Tom Wood, Ulrich Brunner, Alfred Colomb and Earl of Dufferin. Pink shades—Mrs. J. Laing, Baroness Rothschild, Mrs. Sharman Crawford, Her Majesty, Paul Neyron and Mme. Gabriel Luizet. In the white and flesh shades are Clio, Margaret Dickson, Gloire Lyonnaise and Frau Karl Druschki.

In the tea scented section we find the widest range of color and they are the most delicate and fragrant of all the roses. Unfortunately this class is, with a very few exceptions, too tender for our rigorous climate. The extreme heat takes the vitality from the plant, and, followed by a hard winter, generally proves too severe for this class of roses. The plants can be potted in October and carried safely over winter in a deep cold frame or cellar. With so many hardier varieties in other equally desirable classes, it is questionable if the tea roses, as a whole, are worthy of the attention they require. The pink and white varieties of Maman Cochet, however, will, with the ordinary protection afforded roses, come through the average winter in good shape and prove ideal bedding roses, being particularly good in the late autumn.

### THE HYBRID TEAS.

The hybrid tea section, although a comparatively new member of the rose family, is now the most popular type for all-around garden cultivation. It is a hybrid between the tea scented and other hardier classes, generally the hybrid perpetual, and in most of its varieties it combines the continuous blooming qualities of one parent with the hardiness of the other, making it really more perpetual than the hybrid perpetual section. With a careful selection of hybrid teas it is easily possible to have roses in quantity from June until late in November. With this in mind, the following varieties will be found most desirable: Gruss an Teplitz, crimson scarlet; Etoile de France, velvety crimson; Richmond, scarlet red; Killarney, soft flesh pink; La France, silvery pink; Caroline Testout, satiny

pink; Konigin Karola, satiny rose, similar to and sometimes referred to as an improved C. Testout—certainly a superb variety; Kaiserin Augusta Victoria, primrose to white. Among the newer hybrid teas tested are White Killarney, a sport of Killarney, but of a stronger growth than the parent, making it a grand acquisition for garden culture as well as forcing. The Lyon rose, a beautiful combination of salmon, coral red and chrome yellow, is another most desirable variety, but does not always come perfect in summer. Rhea Reid has proved itself one of the most valuable of the recent novelties, flowering continuously throughout the hottest spells and standing the winter well. The color is a bright cherry crimson.

#### CLIMBERS.

Among climbing roses the recently introduced hybrid Wichuraiana section will, without doubt, prove the most important of the climbing roses. The Wichuraiana blood keeps this section more impervious to mildew and other fungous diseases than the polyantha type, and the rich glossiness of the foliage peculiar to Wichuraiana is usually retained in the hybrids. The growth is invariably strong and clean during the entire season and is sufficiently hardy to stand the average winter with little protection. The varieties Dorothy Perkins and Lady Gay are probably the most prominent of this group. The flowers are produced in large clusters and are quite fragrant. The colors, shading from bright to shell pink, retain their beauty even in the stages of passing away.

The single flowering types of Wichuraiana are particularly graceful when used on arches or trellises. Hiawatha, intense crimson, with the petals shading to white, is one of the best. Other notable varieties are Delight, bright

Crimson Rambler, is perhaps a trifle more hardy than the hybrid Wichuraiana. Like the latter, they are best adapted for covering arches, etc. A very pretty effect may be obtained by keeping the long growths pinned close to the ground, when they will make a perfect ground cover and bloom even better than on arches. The variety Leuchstern is one of the earliest and showiest of the polyanthas. The white colored eye on a bright rose ground makes a very pleasing combination. Rubin, also early, is of a better form and deeper shade than Crimson Rambler, but not so strong growing. Psyche, a pale rosy pink, is an extremely heavy grower, and well worth a place in the garden.

#### DWARF ROSES.

The dwarf polyantha or pompon roses were comparatively little known until the introduction of the crimson Baby Rambler, followed by the white and pink varieties. These are all useful for bordering the larger growing kinds, and are splendid for massing by themselves. Other good varieties are Marie Pavie, Schneewitchen, Paquerette and Mignonette, all on a white shade. Perle des Rouges and the new President Taft are deep crimson—a rather rare color in this section. Eugene and Leonie Lamesch are both distinct and beautiful varieties; the copper and orange shading makes a beautiful and unique combination.

Another type worth mentioning is the midget rose—Rosa multiflora nana. This is truly a midget, and is most remarkable for its hardiness and free flowering qualities. It can be grown annually from seed, and will commence flowering within 40 days of germination, and continues on through the summer. The colors are white and various shades of pink. Even the young plants will stand our

fume or nicotine and half a cake of ivory soap dissolved in five gallons of water will prove most effective. A second application should be made in six days to get the brood in the process of hatching.

The leaf roller, a green caterpillar, varying from one-half to one inch in length, is the most destructive of the insects. It attacks the young foliage early in the season and later the buds after they form and commence development. At this stage they eat their way into and completely destroy a number of buds in the course of a night. Hellebore, used at the rate of one ounce to two gallons of hot water, and applied when cool, is a good remedy. A less pleasant but much more effective way to dispose of them is to crush them between the finger and the thumb. The best time to put this method in practice is during the warm evenings or in the morning before the sun gets strong.

The rose slug, a small green worm, appears late in June or July, attacking the under side of the foliage, and may be detected by the skeletonized appearance of the leaf. The hellebore solution is the most effective for this insect.

## THE ALLIED TRADES

THE Kroeschell Bros. Co., Chicago, have issued two cards giving in condensed form much useful information for pipe workers, such as size of pipe; price per foot, standard; internal area, square inches; external area, square inches; length of pipe containing one square foot heating surface; square foot in each lineal foot; contents in gallons per lineal foot; weight of water per lineal foot, pounds; length of pipe containing one cubic foot; weight of pipe per foot; bursting pressure of standard steel pipe in pounds; working pressure of standard steel pipe in pounds; offset measurements; etc. The Kroeschell Bros. Co. will be pleased to supply copies of these cards on application.

#### A New Roof Construction.

ED. AMERICAN FLORIST:

The accompanying photograph will probably be of interest to the trade, who think an all-iron sash bar an improbability. The photo shows the interior of a house with our new patented roof construction. Tee iron bars are used and glass is butted and secured beneath the same with galvanized iron drip conductors, using brass thumb screws. All bolts on this house are brass, which adds very little to the cost. We have laid glass every way and find this by far the easiest and quickest and there can be no excuse for leaving in a broken light when it is not necessary to climb on the roof. There is perfect allowance for expansion, no putty or filling of any kind is used and lead washers are used to butt the bottom lights. The bars were a little over 16 feet long, sawed half way and bent over the pipe ridge, on top of which is a galvanized angle iron to which the bars are bolted. Two panes of glass 16x48 are used on a side, making only one butt and this can be a good one, making a perfectly dripless roof and leakage trifling. On account of the ease in removing a few lights for ventilation, we have not hurried this part

THE PORTLAND ROSE FESTIVAL.

Fire Engine Decorated with Roses.

red, with white center; Evangeline, white, tips of petals pink and deliciously fragrant, and Wedding Bells, shell pink on a white base. The Wichuraiana roses are admirably adapted for covering arbors, fences, for making a rapid mask for any unsightly objects, or covering stone work.

The climbing polyantha section, commencing with the well-known

severe winters without any protection whatever.

#### INSECTS.

Among insect pests the most persistent but least troublesome is the aphid or green fly. It appears early in the season and attacks the young tender growths, and if left alone will soon destroy the vitality of the plant. A solution used in proportion of either one and one-fourth ounces of nico

NEW IRON SASHBAR GREENHOUSE OF THE HERMS FLORAL CO., PORTSMOUTH, O.

of the construction, but the sash are being made of small galvanized iron frames. We certainly think this the ideal construction for the short span, high eave style with iron gutters and posts.

HERMS FLORAL CO.  
Portsmouth, O.

#### Combination Check and Globe Valve.

The accompanying illustration shows the details of a new valve upon which W. B. Davis, of Aurora, Ill., of the firm of W. B. Davis & Co., has secured a patent. The valve is intended for use on steam heating pipes to take the place of two valves, viz., a check and globe or gate valve, where these are now used. Besides the expense of two valves the room taken up is often an important consideration. Those acquainted with steam fitting know how important it is to keep water from other radiators or pipes from backing up into a set not in use, also to prevent water from the boiler backing up into city water pipes or returns on steam runs, all of which is prevented by the use of this new valve, in addition to its use as a gate valve.

In repairing broken pipes or taking pipes apart the ordinary check valve is not to be depended on. If not in perfect working order the steamfitter is liable to get a bad scalding from steam and water forced back through the inoperative check valve. In the present valve the disc or plunger can be screwed down hard and there is no fear of anything of the kind happening, while when left open it acts

Combination Check and Globe Valve.

simply as a check valve. A stub projects from the lower end of the valve stem and when the stem is turned this stub strikes one of the upper guides of the plunger, causing the plunger to turn also, thus preventing it from striking shut when the stem is raised, also causing it to grind out any dirt or scale that might collect on the seat so that it always closes perfectly tight. The advantages of this valve are many. In the first place it is cheaper, sav-

ing the price of one valve; it may be fixed where room is scarce and, should scale or dirt collect around the plunger it can be cleaned almost instantly by closing it down and opening it once or twice. It is of course a far better arrangement than having gate valves at either end of a run of pipes as this means the operator walking the full length of a house or run of pipes to open both flow and return valves when turning on the steam and also to close them when turning it off. Mr. Davis is not only a greenhouse man but a practical steamfitter as well and is not likely to recommend anything that is not thoroughly practical.

## OBITUARY.

### Bernard Schramm.

Bernard Schramm, Jr., member of the firm of Schramm Bros., Toledo, O., died June 24, at his residence, 816 George street, after an illness of only 12 hours of intestinal trouble. He was 31 years of age and was at work in the greenhouses the day preceding his death, but was taken suddenly ill in the night. He was the son of Bernard Schramm, one of the veteran florists of the city, and had lived all his life in Toledo. He leaves a wife, two children, his aged father, a brother, Charles, with whom he was engaged in business, and four sisters, Miss Minnie Schramm, Mrs. C. Rensch, Mrs. Frank Neiss and Mrs. Joseph Kesting, all of Toledo.

**THE Young Naturalists' League** in England, founded by W. Percival Westill about one year ago, had, on its first birthday, over 3,000 members. We would like to see so promising a start in this country where the opportunities are far greater than in England for nature study.

## Ladies' Society of American Florists.

Miss Meinhardt, president of the Ladies' Society of American Florists, has appointed Mrs. Richard Vincent, Jr., White Marsh, Md., on the board of directors to fill out the unexpired term of Mrs. W. J. Vesey, deceased.

MRS. CHAS. H. MAYNARD, Sec'y.

A MOST interesting and important paper on sweet peas by W. Atlee Burpee, will be found on page 1138 of this issue.

## National Sweet Pea Society.

The premium list for the exhibition of the National Sweet Pea Society of America to be held at St. Nicholas rink, New York, July 12-13, has been mailed and can be obtained from Harry A. Bunyard, secretary of the society, 342 West Fourteenth street, New York. Besides the prizes already announced there are a number of others that are liberal enough in amount to insure a good competition in all the principal classes.

W. T. Hutchins, Santa Rosa, Calif., Professor Beal of Cornell University, and W. C. Kerr will act as judges and Mr. Hutchins and others will read papers.

## Society of American Florists.

At the mid-Lent meeting of the executive board the following resolution was passed: "Resolved, that if five or more members write to the secretary expressing an especial interest in any floricultural topic and request the organizing of a section devoted to that subject the secretary shall assign a place on the programme to that topic and shall designate it by a suitable name as a separate section." A place on the programme has been reserved for such sections and the secretary will be pleased to hear from any members who wish the organization of such a section.

H. B. DORNER, Sec'y.

## New Methods of Plant Breeding.

In the first number of the American Breeders' Magazine, Geo. W. Oliver, of the Department of Agriculture, Washington, D. C., has a long article on "New Methods of Plant Breeding," the principal plants treated on being lettuce, and alfalfa. For crossing lettuce, the author advises sowing plants of both parents early in spring in order that they flower during moderately warm weather, preferably indoors.

He advises sowing the seed bearing parent a week or so after the pollen parent to insure plenty of pollen when the flowers in the former open and the earliest flowers should be used. He describes the methods of depollinating the flowers and pollinating with the desired pollen by use of a tiny jet of water from a chip blower.

In crossing alfalfas it is necessary to emasculate the flowers at a very early stage as the anthers dehisce while enclosed in the unopened bud, but the pollen remains inoperative while the sexual column remains unsprung. The operator has to endeavor to remove the pollen from among the exploded anthers without injuring any part of the pistil and it requires delicate manipulation. A pin is used to check the springing of the column farther than is necessary, the operation being well illustrated by cuts prepared from photographs. The pollen is all washed away with a tiny jet of water, and, while the column still rests in position the stigma is pollinated, the pin withdrawn and the column allowed to take its natural position.

## American Gladiolus Society.

There was a meeting of the executive committee of the above society June 27 in New York, and the following exhibition committee was appointed to take charge of the coming show at Rochester, August 16-19: H. Youell, chairman, Syracuse, N. Y.; Arthur Cowee, Berlin, N. Y.; E. H. Cushman, Sylvania, O.; L. Merton Gage, secretary, Orange, Mass. It was also decided that amateurs or private gardeners would not be required to pay for space for their exhibits and that such space would be paid for by the society.

President Hendrickson has appointed a membership committee comprised of the following gentlemen: J. B. McArdle, 50 Barclay street, New York; Wm. Cahill, Bolton street, South Boston, Mass., and E. E. Stewart, Rives Junction, Mich. There are now 21 prizes offered for our exhibition, eight of which are in the amateur class, which include, since my last report, two more, a silver cup by Montague Chamberlain, Groton, Mass., for six best named varieties, one bloom each, exhibition by an amateur, and a silver cup by L. Merton Gage, Orange, Mass., for best collection of blue gladioli, exhibited by an amateur. The following awards have also been placed in the amateur class: F. R. Pierson, Tarrytown, N. Y., \$5 in gold for best collection of white throated named varieties; \$5 in gold for best collection of mottled and striped varieties. Stump & Walter Co., \$10 in gold for 12 best varieties, three spikes each. A. T. Boddington, New York, \$5 in gold for best collection of yellow named varieties. John Lewis Childs, Floral Park, N. Y., \$5 in gold for best vase of America, not less than 12 spikes.

## RULES GOVERNING THE EXHIBITION.

(1) All entries must be made to the recording secretary (L. Merton Gage) three days before the first day of the exhibition, on blanks provided by the secretary for the purpose.

(2) Exhibits in competition for prizes must be of the exhibitor's raising.

(3) Exhibits must be in place before 12 (noon) each day on which exhibits are to be judged.

(4) Exhibitors will be awarded but one premium in each class in which they compete and then only where the exhibits on their merit warrant the judges in making awards.

(5) Exhibitors are requested to keep their flowers in fresh condition during the time the exhibition remains open.

(6) While the society will take reasonable care of the property of the exhibitors, yet it will not in any way be responsible for the loss or damage of anything exhibited.

(7) Exhibits, after being staged cannot be removed until the exhibition is closed, without the consent of the exhibition committee.

(8) The society requests exhibitors to attach labels to exhibits. Correct naming of varieties is very important.

(9) Exhibitors will be required to provide tables and everything else necessary for table decorations.

(10) In entering, every exhibitor agrees to be governed by the rules.

L. MERTON GAGE, Sec'y.

Orange, Mass., July 2.

## Meetings Next Week.

Baltimore, Md., July 11, 8 p. m.—Gardeners and Florists' Club of Baltimore, Exchange hall, St. Paul and Franklin streets.  
Chicago, July 13.—Gardeners' and Florists' Union No. 10,615, 10 and 12 Clark street.

Cleveland, O., July 11, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit avenue.

La Crosse, Wis., July 12.—La Crosse Gardeners' and Florists' Society, Hotel Stoddard.  
Lake Geneva, Wis., July 16, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Madison, N. J., July 13, 8 p. m.—Morris County Gardeners' and Florists' Society, Masonic Hall.

New London, Conn., July 13.—New London County Horticultural Society, Elks' Hall.  
New Orleans, La., July 10, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

New York, July 11, 7:30 p. m.—New York Florists' Club, Grand Opera House building.

New York, July 13, 4:30 p. m.—Horticultural Society of New York, American Institute rooms.

Omaha, Neb., July 14, 8 p. m.—Omaha Florists' Club, City Hall.

Pasadena, Calif., July 15, 8 p. m.—Pasadena Gardeners' Association, Board of Trade rooms, West Colorado street.

Rochester, N. Y., July 11, 8 p. m.—Commercial Florists' Association of Rochester, 416 Cutler building.

Scranton, Pa., July 15, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Springfield, O., July 11.—Springfield Florists' Club, office of the Good & Reese Co.

St. Louis, Mo., July 14, 2 p. m.—St. Louis Florists' Club Odd Fellows' building, 9th and Olive streets.

Toledo, O., July 13.—Toledo Florists' Club.

Winnipeg, Man., July 13.—Winnipeg Florists' Association.

### An Ower-Fed Bird.

Na, Geordie Watson, ye were wrang,  
Nae Hieland scones or toddy  
Hae pow'r to draw a Scottish sang  
Frae this puir Irish body.

"Wha tastes o' mither's cherry pie,"  
Ye swore, "that instant learns  
In wamefu' praise of it to sigh  
An' sing like Robbie Burns."

Yet now my thrapple's felt its fouth,  
Wi' pie my kyte is thrang,  
But there's nae sound upon my mouth  
That's vera like a sang.

Hoots man! I hae nae words ava,  
An' O! it grieves me sair.  
The pie has ta'en my breath an' a';  
There's room for naething mair.

Yon cantie robin puts to shame  
Sae puir a bird as I;  
He has but worms in his wee wame,  
Whilst I hae cherry pie.

Na, Geordie Watson, ye were wrang!  
Nae Hieland scones or toddy  
Hae pow'r to draw a Scottish sang  
Frae this puir Irish body.

—T. A. Daly in the Philadelphia Catholic Standard and Times.

[Verse will not convince Geordie, nor prose.  
Try "Bonnie Doon." That's soothing any-  
way.—Ed. A. F.]

## Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs.. See Ready Reference Section.

Where answers are to be mailed from this office,  
enclose 10 cents extra to cover postage, etc

**Situation Wanted**—Gardener good at growing pot plants under glass, vegetables and all outdoor work; first class refs.; private place preferred; single, age 34.

Address GARDENER, care American Florist.

**Situation Wanted**—Cornell student who has had practical experience in retail flower store and in nursery lines desires a good position on the Pacific coast; would invest in suitable place.

Key 147, care American Florist.

**Situation Wanted**—By sober young man, experienced growing general line of cut flowers, capable of taking charge of section or commercial place; Northwest preferred; state wages.

Address Key 146, care American Florist.

**Situation Wanted**—By practical middle-aged florist; life experience in growing roses, carnations, violets, chrysanthemums and bedding plants; single, sober, industrious; state wages.

Address Key 149, care American Florist.

**Situation Wanted**—On private place near large town or small city by an experienced gardener, capable of laying out grounds and doing all work pertaining to planting growing and care of gardens; unexcelled references; parties looking for a reliable, steady man of good character and habits who knows his business, address

Key 144, care American Florist.

**Help Wanted**—A rose grower to work in rose sections; state wages without board.  
COLE BROS., Peoria, Ill.

**Help Wanted**—Three experienced potters; give references. VAUGHAN'S GREENHOUSES  
Western Springs, Ill.

**Help Wanted**—For greenhouse work; three or four good potters. Apply to  
BASSETT & WASHBURN, Hinsdale, Ill.

**Help Wanted**—Greenhouse engineer for steam fitting and light boiler repairs; wages, \$14 per week; steady employment; married man preferred.  
K y 129, care American Florist.

**Help Wanted**—Two nurserymen who are honest and industrious; wages \$2.50 per day; steady employment and advancement if satisfactory.  
DEVILS LAKE NURSERY, Devils Lake, N. Dak.

**For Sale**—Furman boiler, size A 83; capacity, 8,000 square feet; used one winter; good as new; am going to enlarge plant  
CARL F. BREHMER Chillicothe, Ohio.

**For Sale**—Good greenhouse in one of the most desirable towns, in excellent location; three rail roads, making good shipping center; a snap.  
Apply to WM. BALLARD Perry Iowa.

**For Sale**—80-acre farm, 17 miles from Chicago, five blocks from station, sidewalk out to farm, switch track, good soil, ideal location for greenhouses, Address  
FRANCIS A. BECKER Des Plaines, Ill.

**For Sale**—Two second hand hot water boilers in a first-class condition: one for 6,000 and one for 6,500 lineal feet of 4 inch pipe.  
SUPERIOR MACHINE & BOILER WORKS  
840-850 W. Superior St., Chicago.

**For Sale**—We are changing our heating system from hot water to steam, and offer for sale 3,500 feet of 4-in. cast iron pipe, taken apart mostly in 20-ft. lengths, in good condition, at 7c per foot;  
KRING BROS., Fairbury, Ill.

**Wanted**—Second-hand hot water boiler, large enough to heat 7,000 feet of glass.  
GEO. H. LEONARD So. Portland, Me.

**For Sale or Rent**—40,000 square feet of glass, in good location; needs partial rebuilding; rent accordingly, or will sell at reasonable price.  
Key 460, care American Florist.

## WANTED

Greenhouse glaziers at once;  
75,000 ft. of glass to put in.

J. M. GASSER CO., Rocky River, O.

## WANTED

Rose grower for Killarney section;  
good wages to right man.

J. M. GASSER CO., Rocky River, O.

## WANTED.

Seedsman capable of earning  
\$1000 per year. State fully your  
experience in seed business. Address

Key 494, care American Florist.

## WANTED

Rose growers; men capable and  
experienced in growing American  
Beauties in sections; good wages and  
desirable positions.

HELLER BROS., New Castle, Ind.

## WANTED

Young man with thorough ornamental  
nursery stock training. Splendid open-  
ing for right party. Must furnish the  
best of recommendation. Address

Elm City Nursery Co., New Haven, Conn.

## Wanted—A Working Gardener

### Chicago.

#### STOCK A LITTLE SHORTER.

While, unfortunately, there is still too much poor stock on the market there has been a decided shortage in good roses and carnations and were trade only as brisk as it was a week or two ago the shortage would be serious. The recent hot weather rushed the roses out and the decided cold wave of Sunday and Monday last prevented the flowers opening. Business in long distance shipments, especially to the far west and northwest, has fallen off considerably during the last seven days, a heat wave out there being held responsible for this by some. But in the middle west and the country served regularly by shippers from this market the business is far better than usual at this season. The Fourth is never looked upon as a big day for flower business but several wholesalers report an excellent day's trade, although they closed soon after midday.

This has certainly been a hard season on carnation plants: First the frost and now the heat giving those growers who have a light soil to contend with an anxious time of it. Some growers have their benches and soil all ready for planting but have to wait for rain before lifting. Others report orders coming along from those who want to plant early but they are timid about lifting while it is so very dry. Meanwhile the old plants are still flowering away and the flowers are being sent to market but most of them may almost as well be thrown away at the greenhouses. They are small and poor in color and substance and hardly last out the day. Asters are drying up in the fields and the later plants have hardly taken hold. Sweet peas are worse than the asters and in many instances have collapsed entirely. Here it may be well to note the uselessness of cutting big lengths of vine with the sweet peas, as some growers are doing. It is worse than useless, for the amount of moisture that would be necessary to maintain this length of vine and amount of leaf simply cannot be passed through the hardened stems and the flowers and foliage wilt in the boxes and never pick up.

As to prices for the mediocre stock that is coming along these hardly enter into the deal. It is just a matter of getting rid of the flowers at any old price that a retailer cares to offer to clear it up. Thousands of flowers go

to the rubbish barrel and this is only another argument in favor of cleaning out the old plants from the houses and preparing for next season's stock. There is every probability that carnation plants will be scarce and this is all the more reason for getting to work on planting early. As to other flowers, orchids seem to be in about the strong-

Darby.

(The Late George R. Wheeldon.)

est position. There are still some *Cattleya Mossiae* in, a good sprinkling of *C. gigas*, some *C. Trianae* and *C. Harrisoniae*, but the flower of the week is *C. Gaskelliana*, proving our oft-repeated advice about growing this pretty species to fill the gap between *C. Mossiae* and *C. labiata autumnalis* to be sound commercially. *C. Gaskelliana* comes nearer *C. labiata* than any other species, except the little grown spring flowering *C. Warneri*, yet it is quite distinct, both in flower and season and an excellent species. Now that the wedding demand is slackening valley is not quite so much in demand, but there is still good stock in the market. Peonies will be on tap

for another couple of weeks probably but their glory is departed. Other small flowers there are in plenty and a few delphiniums and other hardy herbaceous flowers are seen. They are not up to their usual form though and do not create much stir.

#### NOTES.

The "sane Fourth" was celebrated at Hinsdale by an old-time parade of floats and autos. Over 30 autos were in the parade, all finely decorated, and it is calculated that at least 10,000 people were in the village that day. C. L. Washburn had his car decorated with flags and bunting. The greenhouse boys, members of the order of Maccabees, had a float with two rooms in one of which were two people nursing a third; in the other Joseph Kohut, the head carnation grower, taking care of a family. The other room was in charge of Henry Doodie, and the whole thing caused much favorable comment. The B. & W. ball team were in the procession in uniform and played a game in the afternoon. A fine display of fireworks was given in the evening.

At Bassett & Washburn's the young Beauties are still arriving in good condition, also Kaiserin. Mr. Washburn says trade is keeping up extremely well for the season, orders for shipping to out-of-town points at reasonable distance being plentiful though some of the longer distance shipments have been cut down. They are ready to go on with carnation planting at Hinsdale but the weather is too dry and they will probably not lift any until after a rain has fallen.

The remains of Geo. R. Wheeldon (Darby) were laid at rest in Mt. Greenwood cemetery June 30. The funeral arrangements were completed at Undertaker Ralston's early in the forenoon. J. C. Vaughan, August Lange, L. H. Winterson, T. E. Waters and John Bruchner were in attendance. Walter Wheeldon, son of the deceased, who is a deaf and dumb printer, came on from Buffalo and, with Messrs. Lange and Bruchner, accompanied the remains to the cemetery. There was a profusion of flowers, mostly from the trade.

At the J. A. Budlong Co.'s store good roses and carnations continue to arrive notwithstanding the heat and, while out-of-town shipping trade has fallen off a little, Phil Schupp manages to clear up in pretty good shape daily.

# Summer Flowers

We devote a whole range of glass exclusively to **Kaiserin, Maryland, Killarney, Rhea Reid and Summer Beauties.** These are the best roses for hot weather. We bring our flowers in from our own greenhouses two and three times per day, after they have been thoroughly chilled and hardened. With the best facilities, our own growth of stock and long experience we solicit your trade. All goods billed at market prices.

BUY DIRECT OF THE GROWERS

## Bassett & Washburn

Store and Office: 76 Wabash Ave.,

CHICAGO

Greenhouses: HINSDALE, ILL.

# Poehlmann's Flowers

are justly celebrated all over the United States for their fine quality. Our unexcelled facilities, both at the greenhouses and our wholesale store, enable us to handle the flowers, even in the **hottest weather** with promptitude and dispatch, insuring their arrival in first-class condition, no matter how far they are shipped. The stock we are now cutting is of exceptionally good quality and substance for the season.

Our **Beauties** of medium and shorter grades from young plants are splendid stock, fine foliage, good stems and flowers of fine color. **White Killarney** is in great shape and we have plenty for everybody. Also **Killarney, My Maryland, and Richmond.**

**Carnations** in all the leading varieties including fine **Enchantress, Winsor and Lawson,** are exceptionally good for this season of the year. **Home Grown Orchids,** fine fully developed flowers a specialty with us.

**Valley and Harrisi Lilies all the Year Round.**

**POELHMANN BROS. CO.** OFFICE AND SALESROOM:  
33-35-37 RANDOLPH STREET. Chicago,  
LONG DISTANCE PHONE, RANDOLPH 35.

Chas. J. Bond, late of Philadelphia, who started up in orchid growing at Naperville some time ago, is cutting his first flowers. **Cattleya Trianae** and **C. Harrisoniae** are among the principal ones now being cut, the former considerably out of season, as frequently happens with newly imported stock. The flowers are good and of fine varieties. Mr. Bond consigns the whole of his cut to **Vaughan & Sperry.** At present he has two houses, each 27x100 feet, devoted to orchids.

**Hoerber Bros.** continue to receive fine stock from their **Desplaines** plant, which cleans up well. **Harry Mannheim,** of this firm, left for **Dyer, Ind.,** on Saturday on a visit to **Mrs. Mannheim** and family, who are making a lengthy stay there. **Harry** says he doesn't care for the bachelor life, but he looks well on it.

Some of the finest carnations coming to this market now are from the range of **P. Meuret, Park Ridge.** Mr. Meuret's range is not large, but he certainly produces the goods in quantity and of good quality. He has 15,000 feet of glass devoted to carnations entirely.

## VAUGHAN & SPERRY

LONG DISTANCE PHONE  
CENTRAL 2571.

52-54 Wabash Ave., CHICAGO.

The McNeeley Floral Shop, 1153 E. Sixty-third street, is certainly receiving its share of business. During commencement week at the Mandel high school on Woodlawn avenue, the firm made 175 bouquets of daisies for as many students, the average price received for same being \$1.75. On June 29 the home of Mrs. Marshall, 1347 E. Sixty-second street, was decorated, the occasion being the wedding of her daughter to Wm. Gross. The decorations were in white and pink. The bride carried a bouquet of lily of the valley and white sweet peas. The bridesmaids carried bouquets of daisies. Over the bay window was a canopy of white roses; palms and asparagus were also used in decorating the home. The dining room was trimmed with Killarney roses. Last week this firm also decorated the Lexington Baptist church at Sixty-second and Lexington avenue for the wedding of Miss Henderson, 6111 Woodlawn avenue, peonies being used. The bride carried a shower bouquet of lily of the valley and the eight bridesmaids carried bouquets of carnations. Peonies were also used for the home decoration at 6111 Woodlawn avenue. Ernest Schaefer, formerly with Paul Blom on N. Clark street, is manager of the place. The store is handsomely equipped and the ice-box is one of the best in the city. A greenhouse will be built in the rear of the store in the near future.

At Peter Reinberg's the new Beauties continue to arrive in fine shape and the shipping trade keeps up fine. Tim Matchen takes a week end trip to Round Lake this week. A very sad affair happened at the Reinberg carnation "farm," July 4, when John Gawry was accidentally shot by Richard Webber and killed instantly. It appears that they had been handling a revolver and Webber, believing it to be empty after firing several times, pulled the trigger and for some reason it missed fire. Becoming careless he pulled it again and, the gun happening to point in Gawry's direction, the bullet caught him fair between the eyes, killing him instantly.

A very clever design was got up in the shape of a broken column by F. G. Mueller, 329 E. Thirty-fifth street. It consisted mostly of solid white carnations; with Killarney roses and Boston ivy entwining the column, while Easter lilies and white carnations made up the base. It stood five and one-half feet high and was delivered to 8801 Lafayette avenue, where the funeral of John Buchannan was held the latter part of last week. Mr. Mueller also had a wedding decoration at 1300 Milwaukee avenue on July 3.

At Poehlmann Bros. Co. the summer trade has kept up remarkably well and few of the many thousands of fine roses and carnations that come here from the greenhouses are wasted. White Killarney roses, Easter lilies and valley are three choice offerings

here, all in the pink of condition. John Poehlmann says they are continually getting new customers who give standing orders for shipments to be sent daily. Carnations are very good for the season though all this class of stock begins now to look a little the worse for wear.

Robt. A. Smythe, of Benton Harbor, Mich., has been in town this week looking up cement benches. He appeared to be much pleased with the Garland bench as seen at various places at Desplaines and elsewhere. He reports business fair now, but it has been very good. Rain is badly wanted for the crops in his section. His fruit farm will probably bring about one-fourth of an average crop this season, owing to the freeze in early spring.

The arrival of the outdoor gladioli at Kennicott Bros. Co. has had the effect of shading the price of the indoor grown stock. Both are elegant flowers. Peonies are not arriving now in any quantity here, but there is considerable cold storage stock still left over in good condition. June here was a record-breaker.

Zech & Mann had a big day for the Fourth of July. Stock continues to arrive here in quantity and fair quality for the season and John Zech certainly strives hard to push it out, handling big quantities and giving the retailer the advantage of plenty of stock at low prices.

A serious fire occurred at Adam Zender's, July 4, in the afternoon, started by some boys playing with matches. Part of the greenhouses and barn were burned and one horse, making altogether a loss of about \$10,000, with very little insurance to meet it.

At Wiator Bros. the flowers are excellent for the season, though naturally not of the same quality as a few weeks ago. At the greenhouses things are looking well and the young stock recently planted is making an excellent growth.

Miss Margaret Guernsey, of the Fleischman Floral Co., has gone east for a couple of weeks' vacation, to look up old friends and attend the florists' outing July 7, at Witzel's Grove, Long Island, N. Y.

C. W. McKellar has fine Cattleya gigas on show this week, the flowers large and well colored. He reports business as keeping up remarkably well for the season.

At Geo. Reinberg's we noted fine Cattleya gigas, C. Gaskelliana and C. Mossiae. These orchids and good smilax and asparagus are about the best sellers now.

Miss M. C. Gunterburg, of the Flower Growers' Market, has gone to Fairmount, Minn., for a month on a vacation trip and to visit with her sister.

J. E. Farrell, 4643 State street, reports business as rather quiet. Mr. Farrell closed up his store at 1058 Garfield boulevard, a few months ago.

John Evans of Richmond, Ind., and O. P. Bassett of Hinsdale met in Paris

and paid a very pleasant visit together to some of the rose gardens there.

J. F. Kidwell & Bro., 959 E. Forty-third street, report business as brisk as usual, which consists mostly of funeral and wedding work.

W. L. Sullivan and S. Friedman of the Woodlawn Floral Shop, 863 E. Sixty-third street, are giving their store a general remodeling.

All florist growers are anxious about their water supply and many field plants are suffering.

Vaughan's Seed Store is receiving California freesias this week and the French stock is on the way.

Kyle & Foerster report business good. We noted fine gladioli and Easter lilies here.

H. J. Stockmans and wife will sail for Europe July 9 from Montreal.

Visitors: J. W. Tarr and wife, Enid, Okla.; R. A. Smythe, Benton Harbor, Mich.; Jos. Brown, of Brown Bros., Vancouver, B. C.; Herman Levin of Stein & Levin, San Francisco; M. M. Miesse and wife, Lancaster, O.

### Twenty Years Ago.

JULY, 1890.

Phlox Star of Quedlinburg was among the novelties.

The pretty old Mme. Falcot rose was grown considerably around New York and found very profitable.

At a sale in New York state the plants and pots were sold separately and when A. bought plants and B. the pots it led to some amusing incidents.

Madame Crozy was among the novelties in cannas.

Two new ponds for aquatics were made in Lincoln park, Chicago, and the statue to Linnaeus, the great Swedish botanist, was erected.

The yellow calla (Elliottiana) was introduced in England.

A destructive hailstorm broke \$100 worth of glass and ruined 1,000 seed trials at W. Atlee Burpee's place at Fordhook.

WADING RIVER, N. Y.—E. S. Miller is recovering slowly from the effects of his recent accident.

KOKOMO, IND.—W. W. Coles and family spent the Fourth at Oden, Mich., their summer home.

INDIANAPOLIS, IND.—This city will have a flower show this fall from November 8 to 12, the first which has been held here for five years. The State Florists' Association will make an effort to have the display the largest ever witnessed here and prizes to the amount of \$2,000 will be offered.

VICTORIA, B. C.—The rose show held in the Assembly hall by the Horticultural Society on June 28, was a complete success. The general excellence of the display was so pronounced that the judges had a difficult task in making the awards. Their decisions, however, were received very favorably.

### Horticultural Society of Chicago.

J. H. Burdett, secretary of the Horticultural Society of Chicago, announces a meeting at the Art Institute on July 19 at 2 p. m. A special order of business will be the election of a president to fill the vacancy caused by the death of William E. Kelley. An amendment to the by-laws proposed by the executive committee at the last quarterly meeting will be voted on at this meeting, the amendment being along the lines indicated below:

"An annual meeting of the executive committee shall be held as soon as possible after the annual meeting of the society in January to elect a chairman for one year, or until his successor is elected and qualified. He shall preside at all meetings he attends and, with the consent of the committee, appoint all subcommittees except otherwise provided for.

"Meetings may be called by the chairman at any time on not less than three days' written notice, or by consent of five other members on emergency without notice. Meetings shall also be called by the secretary on three days' written notice at the order of the president, or at the request of three members of the committee."

"No funds of this society shall be expended, or indebtedness created, except by appropriation made at a meeting of the executive committee and all appropriations shall receive the affirmative votes of five members present on roll call."

Odd Fellows hall was full of beauty and fragrance June 23, when the Horticultural Society held its rose show. Occupying the center of the hall was an oval of green ferns, palms and shrubs. Ranged around it were wonderful rambler roses of four varieties, two tubs of Lady Gay roses, and tubs of Coquena, Hiawatha and Minnehaha. These roses were exhibited by M. H. Walsh of Woods Hole. Surrounding the central roses were tables covered with white paper, upon which stood hundreds of crystal vases, each holding up to the eye for admiration a fragrant rose. These roses came from the Rogers estate, and from the gardens of Mr. Walsh and Miss Fay at Woods Hole, as well as from private exhibitors. Conspicuous among the flowers was a rare exhibition of water lilies.

Conspicuous among the roses was the table of Frau Karl Druschki—mammoth white roses from the estate of H. H. Rogers. Near by were some very beautiful bouquets of pinks, pink spirea, and sweet peas. The yellow roses, J. Pierre Notting, from the gardens of Miss Fay, were among the loveliest in the exhibition. There were also the sweet pink Madame Gabriel Luizet roses, and a large number of Crawford as well as the delicately tinted Clio. A very pretty exhibition of roses exhibited by Mrs. Amanda Kent, and a table of flowers, mainly purple, blue, pink and white and crimson sweet peas, were exhibited by H. A. Jahn. A general collection of roses and sweetbriar was among

SACRAMENTO, CALIF.—Believing that the appropriation for the State Horticultural Commission is entirely inadequate to carry on the work, and that the state government is not properly supporting that department, the Sacramento Valley Development Association, at a meeting of the directors, June 15, went on record as favoring an increase in the yearly allotment of funds and pledged itself to urge the passage in the next legislature of such measures as will enlarge the powers of the commission and increase the maintenance appropriation. At present the commission is only allotted \$15,000 a year. This sum is barely enough to pay the salaries of the officials connected with the commission, and does not allow enough money with which to do the vast amount of work that is within the province of the department, and is its duty to handle.

# Carnations

Fancy stock,  
500 for \$7.50.

Our selection of colors. We make a specialty of having good, fresh carnations at this time of the year. Try a shipment.

# Lilies

\$1.50 per dozen.

Large, well hardened flowers of superior quality, long stems, and we can furnish them all summer in quantities.

**THE LEO NIESSEN CO.,** Business Hours: 7 a. m. to 6 p. m. Wholesale Florists, 1209 Arch Street, Philadelphia, Pa.

## Philadelphia.

### TRADE AT A LOW EBB.

The retail flower business is about at its lowest ebb, there being little worth noting. Quite a number of the trade have done sending in, and have cleaned out the houses of old stock preparatory to planting with new. Of the roses American Beauty is the leader, with My Maryland second, leading Killarney a trifle since the very warm weather set in. White roses are in good demand for funeral work which forms the bulk of the summer business. Easter lilies, now that the supply can be depended on, are a factor at this season as they keep their standard of excellence at this time as they do in winter. Auratum and Rubrum should soon make their appearance and with their showy flowers add materially to the scant summer assortment. Carnations are failing fast and do not keep well from one day to another. Double petunias are now to be had in quantity and are much used for design work.

### NOTES.

Vacation time is at hand and many of the boys are off on fishing trips and other outings calculated to make them forget business worries. John Westcott is spending the week with his family and Harry May and party at Waretown. Mrs. Julius Wolff and Mrs. Julius Wolff, Jr., are spending the summer in Europe. Walter Yates sails for Europe on July 9. While abroad he will look up a fine line of boxwood which is one of the specialties of his firm. Scarce and old coins are also interesting to Mr. Yates, who is quite a connoisseur and who has disposed of some large collections. He hopes to also pick up something valuable in this line in the foreign markets. Joseph Josephs, one of the most prominent of our curbstone brokers, is also off on a European tour.

The Leo Niessen Co. astonished the trade with the account through the daily papers of the purchase of fine properties at Twelfth and Race streets having a frontage on the latter of 59 feet, running back 100 feet in depth to Spring street. The purchase price was said to be in the neighborhood of \$60,000. It is said that a seven-story concrete building at a cost of over \$50,000, is to be erected, the first floor to be occupied by the firm to which the business will be moved from 1209 Arch street.

The monthly meeting of the Florists Club has been postponed until Tuesday July 12 when the question as to whether we are engaged in a trade or a profession will be thrashed out. Should it be determined that ours or any part of it is professional, we presume that Sir Joseph will at once confer the degree.

W. W. Crawford of 5210 Market street, took unto himself a wife Wednesday, June 29, marrying Miss A. C. Fulmer of this city. Mr. Crawford is one of the rising young men in the business. We wish the couple a long and happy life.

The Leo Niessen Co. is going to make a flower center of its own, moving one block farther up town. There is such a busy market that

what the others do appears to make no difference to them. K.

### Baltimore.

The expected change of temperature came with a rush, the mercury soaring into the nineties and the depressing effects of the heat being magnified by the marked humidity of the atmosphere. The results upon trade have been apparent, as the throngs of home-leaving people who are off to the country, the seaside and mountains, limits naturally all requirements for social observances in the way of plants and cut flowers. One or two large funerals, notably that of Frank C. Wachter, a well-known and well-beloved political leader, former congressman, etc., made heavy demands for flowers, the tributes of his friends being at once numerous and effective. Otherwise, though there are yet a few straggling weddings, the requirements of the season are limited to the ordinary funeral and hospital calls. Notwithstanding the great heat, the character of the stock coming in is keeping up, and some very good roses are received. According to the weather bureau reports, June was abnormally

wet—the precipitation being far above the average and there being only nine clear days in the whole month. The effect of the abundant rains upon vegetation has been most cheering to the farmers and truckers, all sorts of crops growing luxuriantly, and the harvest of grains, vegetables, etc., being amongst the most satisfactory for many years. All kinds of garden products have come into market in great profusion, and prices low—low, that is, to the grower, though to the consumer, after freight charges and middleman's and retailers' profits come out, there is not much of a decrease.

The Florists' Exchange has made another half year's record of business done—the transaction for the six months ending June 30, showing a larger increase than the concern has ever had before in any corresponding term. A considerable part of this growth, however, is due to the sale of supplies for florists and gardeners use which have become an important item of the business done by the establishment. John J. Perry, the manager, has, however, exerted himself to extend the field of the exchange, and a great many and much larger shipments of cut flowers, plants, etc., are being added to its outlets.

The transportation companies are fairly disposed toward this traffic, and seem to realize more than was formerly the case, the importance of promptness and dispatch, with careful handling, essentials to the success of the business of forwarding cut flowers to the cities and towns whose geographical location make them habitual markets for this city. S. B.

## New York.

## MARKET OVERSTOCKED.

Nobody with experience in the business expects much after July 1 and this year is therefore no disappointment. There is an enormous quantity of stock on the market that is practically unsalable. American Beauty roses probably sell as well as anything does but even they are hard to move. Of the tea roses, in inferior grades, gardenias, sweet peas and various other stocks, there is nothing favorable to say. Sweet peas, that in the early spring sold for good prices, cannot now be disposed of for one cent per bunch. Of course there are always some that sell, but alas for the surplus! The quality of gardenias is poor and they are not in reality flowers that appeal to summer buyers, consequently the best go at about what is offered, being about one cent each and the remainder are thrown out. Bunches of cut Dorothy Perkins roses have been selling about as well as anything. The color seems to appeal to the people, and wholesaling as they do at 25 cents for two good sized bunches, there is a good margin of profit in them for the retailers. In fact, the retailers, considering the season, should be making some money as they buy practically everything at their own figures. A week of hot and humid weather has added to the general discomfort and dissatisfaction. Even when it is hot here there is usually some sort of a breeze, but for several days we have had a brazen sky with scarcely enough air to move a leaf; as a consequence humanity sweaters and a portion of it swears.

## NOTES.

Wm. H. Miller, who for several years has been with A. L. Young & Co., is now with August Millang. Mr. Miller has had long experience in all branches of the business and has seen much of horticulture, both in this country and Europe.

The Greek-American outing takes place July 7 at Witzel's Grove, Long Island. The plant growers have chosen the same day for theirs, which will be at Lake Hopatcong, N. J. Doubtless both will be well attended.

H. M. Sanborn, of Oakland, Calif., accompanied by his daughter, has just returned home after spending a week in this city. Their friends at Vaughan's Seed Store have been showing them some of the sights.

Chas. Thorley has taken advantage of the summer dullness and gone to Reno to look over the flowers of the sporting world.

Frank Sheehan, for years a familiar figure in the wholesale district, is now with A. Moltz & Co. in the Coogan building.

Chas. Schenck, of Traendly & Schenck, is suffering from an attack of malaria aggravated by hot weather.

It is said that the majority of the wholesalers will close at 3 p. m. during July and August.

## Cleveland.

Trade the past week has shown a slight decrease, many people having already left the city on their summer vacations. Sweet peas have been very plentiful the past week, and retailers who have been able to use large quantities bought at very low prices. Carnations are poor and a little short of the demand, especially in colors, most growers having thrown theirs out. Rose Pink Enchantress looks very much faded as does Enchantress, while the quality leaves much to be desired. Water lilies are being used quite extensively. A fine lot of fancy ferns are on the market but dagger ferns are a little scarce.

Greens of other kinds are plentiful. Roses are showing the effects of the warm weather but good flowers of Kaiserin are coming in daily. Coreopsis is plentiful. Easter lilies are not much in demand. A fine lot of Lillium candidum is in. Canterbury bells and larkspur are in good demand.

## NOTES.

A visit to F. Witthuhn's place, 3598 West Twenty-fifth street, showed us a very modern and up-to-date store. A glass partition between the store and greenhouse displays his stock of plants, ferns, etc., to good advantage. Around the edge of the roof of the store, which is flat, he has boxes filled with all conceivable flowers which make the store very attractive from the outside.

Mrs. J. Travers, 4920 Central avenue, has moved her store to 2284 East Fifty-fifth street, just around the corner from the old stand. She has a much larger, lighter and better place and expects to do a much larger volume of business.

Read the blackboard bulletin at the Florists' Exchange about the coming convention to be held in Rochester, N. Y. For particulars ask the man.

Geo. Neubert, Connecticut avenue, has sold his greenhouses; he says he will rest a few years.

C. Darnell, of the Gosser Co., is back on the job, getting around with the aid of a stick.

Ben Hart, 8322 Detroit avenue, has an automobile in which he is breaking speed records. C. B.

## Albany, N. Y.

Arrangements for the second annual flower show under the auspices of the Florists' Club are well under way. At the last meeting of the committee for purposes of organization Frederick Goldring was named chairman, Frederick Henkes treasurer, and Robert Davidson secretary. Chairman Goldring announced the appointment of five committees as follows: Hall—Patrick Hyde, chairman, Thomas Snare, Edward P. Tracey, Cornellius Sullivan and Frank Conley. Selection of Judges—Wm. C. Gloeckner, chairman; Alfred D. Wemple and William Hannell. Programme and Printing—Frederick A. Danker, chairman; Louis Menand, Sr., Frank A. Briare, Edward F. Meany and William C. Kurth. Decorations—Samuel Goldring, chairman; William C. King, John Murnane, Jr., Charles Sanders, Harry Riggs, John J. Hagerty and John N. Butts. Premium List—John J. Berberick, chairman; Frederick A. Danker, Patrick Hyde, William C. Gloeckner, and Samuel Goldring.

To encourage out-of-town growers to compete in several classes at the show to be held in November, Chairman Goldring, Fred A. Danker and Fred Henkes, members of the committee, offered to donate cups. A communication from Stumpp & Walter, New York, was presented by Mr. Danker in which that firm offered to donate a fourth cup to be competed for under the same conditions. The next meeting of the committee will be held after the July meeting of the club at a date to be named by the chairman.

Fire was discovered in one of F. A. Danker's greenhouses on Central avenue during the afternoon of June 29. An alarm brought the fire department quickly to the scene and with the aid of a chemical stream what threatened to become a destructive blaze was extinguished. A strong wind at the time was blowing from the west and had it not been for the good work of the firemen the entire range of houses would have gone up in smoke. The loss included some Boston ferns, aspidistras, orchids and other plants, mainly bed-

ding. The damage to the house was mainly to the novelty siding, about 75 feet of which will have to be replaced. Appraisers fixed the damage at \$300 which the insurance companies paid. R. D.

## To Be Done Now.

## IN THE GREENHOUSES.

Any spare time can well be used in picking over the chrysanthemums. The side shoots soon get ahead if left alone.

Dry ventilating gear and leaky faucets are sure signs of the careless grower.

Keep the foliage of calanthes clean by sponging with a solution of soft soap occasionally. The soft scale that attacks these plants soon spoils their appearance and growth if left alone.

Expose crotons to the full sun if the plants are established, but see that there is always plenty of moisture in the atmosphere.

Spray gardenias regularly and freely, but avoid wetting the soil on the benches more than is necessary.

Try and find an outside job for the help in the middle of the hottest days but see, of course, that the watering and spraying are not neglected.

Thin mulching every week with very rich soil is better for cucumbers than heavy top dressings applied less frequently.

It is impossible to keep seedling cinerarias and calceolarias too cool during these hot July days.

Every week that cleaning and painting the inside of the houses is neglected the harder it will be to do owing to the increased size of the stock.

Moderately heavy shade and frequent waterings with a dilute solution of nitrate of soda are great helps to sickly palms.

Prepare pots, soil, and a place to put them for sowing the earliest mignonette.

## OUTDOORS.

It is not too late to attend to trees afflicted with borers. With a stiff piece of thin wire remove all the insects that can be got at and give the tree stems a good coat of lime wash.

Never water superficially. It is worse than useless and has the effect of bringing roots to the surface to be killed by the hot sun.

Plant out the latest asters and see that they are not allowed to fail for want of water. A light shade is of great benefit.

The finest stone dust from the crushers is excellent material for mixing with soil that is inclined to bake up.

When in doubt get a hoe and cut off some weeds from the places where the ordinary cultivator misses them.

Spraying the heads and feeding the roots of roses are both in order now. Good growth cannot be expected in hot weather from dry, poor soil.

Sow endives for late use in a shady position and look carefully after the young plants when they appear.

Young plantations of asparagus, rhubarb and others should not be heavily pulled and no more stalks should be taken from either this year.

Raising seedlings of herbaceous stock is very interesting work and the best or most attractive varieties should be noted while in bloom for seed saving.

Sow a little nitrate of soda on bare places on the lawn, giving a thorough watering at the same time to freshen them up.

It is never a bad time to collect sod for a good pile is one of the best assets a florist can have.

National Florists' Board of Trade, 56 Pine St.  
NEW YORK**Boston.**

June business was good, but everybody now realizes that the summer dullness is on. Stock is good for the season, but there is a surplus in all lines and it is hard to move.

Wm. H. Elliott gave a house warming in his new home in Brighton June 29. Over 300 were present and report the time of their lives.

**San Francisco.**

Last week closed up for the month of June what may be termed a fairly successful period. A few weddings and a fair demand for funeral work helped to a large extent to make the June sales of 1910 reach a higher mark than that of the previous year. The cut flower trade, however, did not show up as well as expected; the failure in this regard is attributed to the fact that many families are away on their summer vacations. There is still an abundance of stock on the market, which can be obtained from the growers at very reasonable prices.

**NOTES.**

Ferrari Bros. have recently purchased 15 acres of land near Mountain View, on which they intend to construct some up-to-date greenhouses in the future.

Herman Levin writes that he is enjoying every moment of his well-earned vacation in the east.

**ARTUS.****Perpetual Carnation Society.**

The Perpetual Carnation Society (English) held its first show of the present season on June 9, it having been postponed from May 10, and the following report of the principal awards is from the Gardeners' Magazine:

"In the premier class, for the best group of cut carnations, not less than 12 varieties, arranged on a table space 3x10 feet, the flowers associated with foliage plants or cut foliage, the gold medal offered as first prize fell to W. H. Lancashire, Victoria Vineries, Guernsey, for a splendid lot of blooms of Enchantress, Mrs. Burnett, Winsor, Marmion, Beacon, Rose Doré, Mikado, Britannia, Robert Craig, etc. all represented by from two dozen to 50 flowers. There were six competitors, consequently this class itself made a splendid display. C. F. Waters, Bal-

there were seven entries in this class. The best 25 blooms of a crimson variety were of Carola, shown by Mr. Engelmann; Mr. Lancashire, second with President, and Mr. Bell third with the latter variety. For any other self variety Mr. Lancashire scored with his Rose Doré, followed by Mr. Bell with Mikado. For a fancy variety Mr. Wallace was to the fore with Bay State, a white variety with rose-red flakes."

**A Hardy Flower.**

The flower of a woman's love is supposed to be so strong and hardy that it will subsist entirely on hot air before marriage and on cold criticism afterward.

LANCASTER, N. H.—John Lewis Childs, of Floral Park, N. Y., was the guest of Mrs. Fred Spaulding last week.

ANSONIA, CONN.—The retail store of J. W. Willis, in the Y. M. C. A. building, which has been closed for some time, has been thoroughly renovated and will open with a new stock.

AUSTIN, TEX.—The Texas Seed and Floral Co. of Dallas was incorporated on June 27, with a capital of \$125,000. The incorporators are Robert Nicholson, E. P. Brown and C. W. Robinson.

BEVERLY, MASS.—The annual rose show at the North Shore Horticultural Society opened here June 27 and was well attended by the people from all along the north shore, including Beverly Farms, Prides Crossing, Magnolia, Gloucester and Hamilton.

MADISON, WIS.—Louis Russos has made an offer to his creditors to settle accounts at 25 cents on the dollar. He runs an ice cream parlor in connection with his floral business and has put up a new building which, the lessee says, reverts to the owners of the land if the lease is broken. Several of the Chicago wholesalers are creditors.

LESTERSHIRE, N. Y.—A story that in actual originality eclipses many sensational events has just leaked out in connection with a wedding of two popular local young people, which occurred about two weeks ago. The parents of the bride had ordered about \$20 worth of flowers with which to decorate the parlor of the home where the ceremony was to take place. The hour arrived and there was no sign of the flowers, but just at the moment the bride and her mother were about to give up in despair and proceed with the ceremony without the flowers, a messenger rushed up to the house bearing a huge floral piece which was inscribed "Father." The boy saved his life by a wonderful burst of speed, but there were no flowers at the wedding.

SYRACUSE, N. Y.—The State Fair Commission held a session at headquarters June 27 and adjourned to the fair grounds, where the members inspected conditions and mapped out the work of preparing the grounds for this year's exhibition. There is a good sized fund available for temporary improvements and the grounds and buildings will present an attractive sight, it is promised when the fair opens September 12. The grounds fund amounts to \$20,000 and in addition there is an appropriation of \$3,000 for a new greenhouse. The work will be carried out under the direction of Commissioner A. E. Perren as superintendent.

The Anchorage Rose Co. recently made an assignment, liabilities about \$14,000, assets, if full value is realized, \$40,000. Mr. Rayner, the president and principal stockholder, has the sympathy of his friends in the trade. The assignment was not forced but Mr. Rayner, since building the plant of 50,000 feet of modern glass, lacked about \$5,000 to complete the plant and tried to run the place a number of years uncompleted, and while one of the most expert growers in the United States he could not, try as he would, keep the mildew out of the roses. He had one misfortune after another the whole time. In the first place the contractor did not complete the houses until too late in the season to grow a crop the first year. Then he bought putty to glaze his houses already made and the putty was a fraud and it all washed out after a few rains. He sued for damages and got \$300 damages, when the verdict should have been at least \$3,000. Then the first winter the night fireman let the water get too low and burnt out one of the large boilers which cost about \$1,000 to replace. It would make the story too long to tell all the misfortunes that came in succession and seemed unavoidable. The biggest real mistake with the amount of capital at his command was building an immense subway under the center of the greenhouses which had to be blasted partly out of solid limestone rock and which he never quite completed, although it cost something like \$10,000. The idea was a good one as the boilers were to be in this subway and the coal could be hauled in and cinders and ashes hauled out and was large enough for two horse teams to pass each other easily but was too big an undertaking with limited resources. Mr. Rayner has taken a position with a florist at Seattle, Wash., and his family will shortly follow. He is delighted with the climate of Seattle.

Geo. Thompson sold his greenhouses, six in number, five acres of ground and five-room residence at auction June 27. It brought something over \$4,000. He intends to remove to Chicago.

A. Rasmussen has two large new houses up and ready to put the glass in. He expects to have them completed by August 1, ready to plant carnations.

The property of the Anchorage Rose Co. will be disposed of if possible at private sale. H. Kleinstarkink bought the place as an investment.

F. Walker & Co. will tear down and rebuild several houses this summer.

Providence.

The spring business of 1910 was most gratifying to all connected with the trade, the sale of bedding plants and nursery stock being away ahead of former seasons. The quality of cut flowers was better than usual and the prices were somewhat above the average of past spring seasons. The business for June was very good. The past week is always looked upon as an extremely quiet one, as the people are busy getting away to their summer residences and about the only business looked for is an occasional steamer or funeral order. But such was not the condition as it was a decidedly busy one owing to heavy funeral demands divided amongst the retailers. The heavy rains have ceased and the weather has settled down to a nice warm temperature, not too hot to be comfortable. Seasonable cut flowers of all kinds are very plentiful and cheap. There was a good demand for roses, valley, carnations and Easter lilies the past week, caused by so many prominent men's funerals. June can go on record as one of the busiest months we have

had this year so far. The young carnation stock in the fields is looking healthy. The recent heavy rains started the plants off in fine shape. There is a ready sale for nice box woods or evergreen trees in tubs and there is not any number of this class of plants to be seen about here on sale.

## NOTES.

John Cross, of J. & C. Cross, of Fall River, was in this city recently and reports the formation there of The Fall River Florists' Association, with Chatterton W. Warburton president, Edward Lawton vice president, John R. Pee secretary, and John C. Cross treasurer.

C. W. Morey, proprietor of the Woonsocket Hill Nursery, has been appointed by State Inspector Stene to attend to the spraying and care of trees in that section of North Smith field.

Robert Hunnicks, for 20 years head gardener for Frederick W. Vanderbilt at Rough Point, Newport, has accepted a position with one of the Maxwell brothers in Connecticut.

City Forester Major Alexander Johnson was chief marshal of the military parade on July 4. Mr. Johnson has always from boyhood taken great interest in military affairs.

Charles Hunt, Oxford street, reports his loss by the hailstorm of June 18 to be over \$1,000. Most of this was in the breakage of glass.

Samuel Kinder has been appointed tree warden of Bristol. This town has appropriated \$1,000 for the spraying of the shade trees.

George A. Johnston is slightly indisposed again with an inflamed bunion.

J. BRINTON.

## New Cement Block Machine.

Vice-Consul Eugene Nabel, of St. Gall, describes a new Swiss machine with revolving molds for shaping building blocks:

Brick clay, various mixtures of cement, sand, gravel, slag, sawdust, cork, etc., may be readily pressed into compact blocks with exact measurements, sharp lines, and edges. All kinds of mixtures have been experimented with, the machine molding them into blocks which have successfully withstood the severest tests. Several different sizes of bricks or blocks may be turned out at the same time, and in series of 10 of uniform size, every half revolution of the press producing five blocks. It may be operated either by hand or motor power, without special skill by one person. It is unlike any machine on the market, cheap in price, operates without the sudden jars usually incident to such machines,

and is durable. It occupies small space, is easily adjusted, and portable. In making bricks this machine dispenses with frames for drying, the process of molding hardening them. [Photographs of the invention, together with the name of the Ohio firm which will construct the machines, may be obtained from the Bureau of Manufactures.]

NEW YORK.—The Giller Floral Supply Co. has leased the ground floor at 147 West Twenty-eighth street.

## The Seed Trade.

### American Seed Trade Association.

E. L. Page, Greene, N. Y., President; L. H. Vaughan, Chicago, First Vice-President; M. H. Duryea, New York, Second Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

SEEDSMEN are anxious over the prolonged drought.

MINNEAPOLIS, MINN.—J. E. Northrup is making a Montana trip.

CALIFORNIA seed crops in the Santa Clara valley were reported looking fine June 21.

TRIMBLE McCULLOUGH, son of J. Chas. McCullough, Cincinnati, is growing miscellaneous beans at Santa Ynez, Calif.

CHICAGO.—Contract prices on the board of trade July 6 for grass seed were noted as follows: Timothy, \$5, nominal. White clover, from 20 cents to 25 cents.

GLADIOLUS WHITE LADY continues to misbehave and even is reported to have shown poor weak growth in California, where it has, during recent years, done best.

H. M. SANBORN and daughter (Miss Abby Sanborn) of Oakland, Calif., were in Chicago this week, returning from the east, where they have been spending a few weeks.

PUMPKIN seeds alleged to be imported for food purposes are held dutiable as "seeds of all kinds not especially provided for" according to a recent treasury decision.

BOSTON, MASS.—Maurice Fuld has resigned his position as manager at W. W. Rawson & Co.'s.—All the seed houses are doing a lively business in garden and farm implements.

A NEW Burbank poppy will be introduced the coming year, said by him to be a cross of the tulip poppy, Shirley and a rupifragum species, growing something larger than Shirley.

SWEET PEA crops on the coast have been undoubtedly hurt from 25 to 35 per cent by the hot weather; crops in the vicinity of Los Angeles probably less than those farther north. Onion in the north was looking very fine as late as the middle of June. Lettuce and radishes fair to good. The Burpee trials of sweet peas at Lompoc are reported looking well.

## Braslan Seed Growers Co.

Lettuce, Onion, Sweet Peas,  
Growers for the Wholesale  
Trade Only.

SAN JOSE, CALIF.

CALIFORNIA sweet peas flowered unusually early this season, and it is believed this will result in the seed crop being somewhat lighter than ordinary.

DETROIT, MICH.—D. M. Ferry & Co. are adding to their warehouses and, it is understood, will rebuild their warehouse at Windsor, Ont., burnt out last winter.

F. S. WHITE, agricultural and horticultural commissioner of the Frisco railway, has been touring Oklahoma for the purpose of exhibiting the fruits and grains grown in the states in which the Frisco system operates. He uses a special car and lectures upon the products.

Chas. W. Scott.

With Vaughan's Seed Store, New York.

## Echoes of the Convention.

In previous notes we erred in stating that there was a "steamer" excursion on Wednesday afternoon. It was a yacht-sloop excursion, the Princeton and the Viking being the craft, with plenty of sails and real sailors. Hon. W. M. Hays, assistant secretary of agriculture, was on board the Princeton. He is a large man, and a precautionary measure he took a seat amidships.

When future generations of seedsmen review the archives of the American Seed Trade Association and look on the portraits of its past presidents, we trust that they will pause and consider J. C. Robinson and his record. As an intelligent, effective and patient executive or as the

Mrs. C. W. Scott.

Formerly Miss Mills, of New York.

## California Seed Crops.

The Kimberlin Seed Co., Santa Clara, writes as follows with regard to California seed crops, June 21: "The seed crops in California are looking fine now but we cannot tell what the onion seed will do until July 20 as we have the hot weather to contend with yet. Sweet peas will be short on some kinds on account of the hot weather we had on May 30. Carrot and lettuce are looking fine at this time."

F. O. B. New York.

It was said by some of the delegates that Leonard Vaughan had a double in the convention, they being of course both handsome men.

At Fordhook Farms, Jerome B. Rice exchanged his wheeled chair for a carriage and was driven all around by his faithful attendant.

So far as we can recall, C. H. Breck was the only Boston representative on the floor of the convention, but he was a good one.

Though not attending the convention J. M. L. Farquhar and W. J. Stewart of Boston made the trip to Fordhook Farms.

The Canadian seedsmen were a robust looking lot of men. Golfing in summer and curling in winter is great exercise.

Both the representatives of the American and Canadian departments of agriculture seem to know their business.

In speaking of toastmasters, Albert McCullough is all right.

### Clover and Timothy Seed in Germany.

In forwarding the names and addresses of firms in Magdeburg handling timothy and clover seed, Vice-Consul James L. A. Burrell states that most of the clover seed used in that district is imported from France, while most of the timothy seed comes from Russia, France and Bohemia. One dealer informed the vice-consul that he once bought timothy seed direct from America, but as he was obliged to pay cash on bill of lading and as the quality of the seed was bad, he would never do so again, and now buys through importing firms in Hamburg. Other firms, the dealer stated, had had similar experiences. The general rate of duty on clover seed imported into Germany is five marks (\$1.19) per 100 kilos (220

**PYRETHRUM POWDER**, used at the rate of one pound of powder to 20 gallons of warm water and sprayed on while warm, is very efficacious against the cabbage worm that is so troublesome in summer.

### Fungus Attacking Radishes.

ED. AMERICAN FLORIST:

Can you tell me what is wrong with the enclosed samples of radish leaves? It does not appear to affect the growth of the roots but begins early on the leaves in white patches and spreads rapidly. C. B. D.

The radish leaves sent were covered with the white rust fungus, a pest that is very common on lands that are allowed to become overrun with weeds, especially the wild mustard. When a garden or field is badly attacked it is usually a matter of a year or two before it can be cleaned, as the spores of the fungus live all winter in the soil. Preventive measures are continual hoeing and cleaning to destroy the weeds that harbor the pest and the removal to the garden fire of all plants attacked. Although in a mild attack the roots may not be much injured yet "C. B. D." will find that, unless some quick means as the above are adopted, the plants will become so stunted that they will be useless.

G.

### Spraying Notes.

Every year the fight against insects and diseases become more intense. In this season we have had the most severe attacks of potato bugs, melon bugs, and maggot, that we can remember. Of these three, the first one bothers us very little because we are so well equipped to handle him that we think no more of poisoning 10 acres of potatoes than we would of cultivating them. The second one, the striped melon bug, is a hard case to handle. He is wise, is very evasive, and his tendency to colonize makes his attack very destructive. We know of instances when these bugs pounce down into a clean patch of melons, cucumbers or squashes, and destroy hundreds of hills in a few hours. We have been told that there is no remedy, which is nearly true, for he works on the under side of the young plants, where nothing will reach him; however, we have found that the mistake people make is by applying remedies to the plant, when it is the bug that should be hit. It is a well-known fact that fine dust will obstruct their breathing cells, thus causing death, but the way to get the dust to the proper spot is the question; certainly not by sprinkling the plant. We use fine tobacco dust and air-slaked lime in equal parts and deftly throw a handful on the in-

festated plant, using all the force possible, thus driving the powder under the leaves and onto the bugs. They will squirm out and roll over, which is the proper moment to give them a second handful. If this is done in the early morning it is quite possible to destroy the bugs in short order. Air-slaked lime alone is often too caustic, and tobacco dust is too expensive; but combined they make a cheap and effective remedy. The secret of success is to patrol the fields regularly and often and treat affected hills only.

The third enemy, the cabbage and radish maggot, so far holds the fort. We have lost all our cabbage and cauliflower to date and most of our radishes. There may be remedies, but to date we know of nothing that is cheap enough. Our wholesale prices for cabbage may average 75 cents to \$1 per barrel, and radishes 10 cents per dozen bunches; at these prices the cheapest remedy is to avoid infested fields, but this season the pest has become almost universal and we will have to find a remedy or quit those crops. For leaf-eating insects we prefer to spray with arsenites, either lead or Paris green. We prefer the arsenite of lead because it suspends much better and is harmless to foliage; but we think it is slower to act. For this reason we often combine the two, thus using 2½ pounds of Paris green and 2½ pounds of lead in 50 gallons of 4-4 Bordeaux. We always use Bordeaux to carry our poison as it helps to suspend the poison, proves a good sticker and marks very plainly the progress of the nozzle, thus insuring a perfect job. The above formula is very effective and not likely to wash off for weeks, besides its fungicidal value.

Another dreaded pest is the asparagus slug and beetle. They are very destructive to young plantations and especially to young plants in nurseries. Thorough spraying with extra strong mixtures is needed, as the slender foliage offers so little chance to deposit the poison. We have before mentioned in these columns that we do not hesitate to poison cabbage, at any time. If we spray with water, we use one barrel soft water, three pounds Fels naptha soap, and five pounds arsenate of lead. This will adhere instead of rolling off. If a dry process seems desirable, add enough Paris green to air-slaked lime to color it and apply with a cheesecloth sack as a duster.

MARKETMAN.

### Diseases of Onions.

**Onion Blight or Mildew** (*Peronospora Schleideniana*).—This is the commonest disease of the onion, and it frequently decreases very materially the onion crop by destroying the leaves and thus reducing to a marked extent the size of the bulbs. It usually first makes its appearance in late June or July. Attacked leaves first show peculiar violet tinted areas, due to the fact that these areas are covered with the fuzzy spore-bearing portions of the fungus, according to a bulletin of the Ontario Department of Agriculture. The diseased leaves very soon become pale or yellowish in spots and collapse and break down. If examined they are seen to be more or less covered with the spore-bearing part of the fungus

## Success In Market Gardening

REVISED AND ENLARGED EDITION.

A new and larger edition of this well known work on market gardening. It contains everything a market gardener wants to know, and in a form easily understood. It is an invaluable guide to any one in the business from the beginner to the most experienced.

PRICE \$1.10

**AMERICAN FLORIST CO.,**

which gives the surface of the leaves a furry appearance. In severe attacks all the leaves in field or patch are very soon destroyed. They are often, however, quickly replaced by a new crop which in turn is generally destroyed by the disease and from this second attack the onions do not usually recover.

Two kinds of spores are produced by the fungus, viz., thin-walled summer spores borne on the minute branched spore-bearing parts of the fungus covering the surface of the attacked leaves, and thick-walled resting spores (oospores) formed in the tissues of the dead leaves. The summer spores are freely scattered by the wind during the summer and new leaves thus become infected. In this way the disease spreads very rapidly, especially during damp, muggy weather. Dead leaves containing the thick-walled resting spores lie on the ground during the winter, and in the spring the spores germinate and give rise to the disease if onions are again planted on the same ground.

Once the leaves are attacked nothing can be done to save them, though the disease may be prevented from spreading and the second crop of leaves saved by thorough and frequent spraying with Bordeaux. Prevention therefore is the only treatment. Spray thoroughly with resin-Bordeaux, beginning about the end of June and continuing throughout the season. Rake up and burn the diseased tops, as by so doing many of the resting spores will be destroyed. Practice rotation of crops, as the disease is carried over the winter by the resting spores on the ground, and it is believed that they retain their vitality for two or three years. Plant onions on well drained land over which there is free circulation of air.

**Onion Smut** (*Urocystis cepulae*).—This disease attacks onions grown from seed. It destroys many of the seedlings shortly after they appear above the ground. The diseased seedlings which are not completely killed in the early stage are so severely injured that they die later or produce small misshapen bulbs. The disease also appears on mature bulbs in the fall. Affected leaves are enlarged and often distorted and dark in color with black streaks. If they are broken they are found to be filled with a black, powdery mass which is composed of the spores of the fungus. Black masses of these smut spores are also

found on the bulbs. The spores winter over in the soil, hence the danger of planting onions on smut infested soil. The disease is not, as generally supposed, disseminated to any extent to the onion seed. It may, however, be carried long distances on the bulbs. The following treatment is recommended:

**Transplanting.**—If the soil is smut infested grow the seedlings on smut free soil, then transplant. This is a certain preventive, but it involves considerable labor. Rotation of crops will reduce considerably the amount of the smut. Drill into the rows when planting seed 100 pounds of sulphur mixed with 50 pounds of lime, per acre. Such applications have been found to greatly reduce the amount of the smut. Lime and sulphur sown broadcast are not effective.

**Black Mould** (*Macrosporium parasiticum*).—This fungus generally follows the downy mildew, causing the dead and dying leaves to become blackened and covered with a thick black fungus growth. As far as is known it does not attack healthy leaves, and therefore its appearance on dead and dying tops should not cause any alarm.

[The resin-Bordeaux herein referred to is made by adding to the ordinary Bordeaux a mixture of two pounds of resin, one pound of sal soda crystals and one gallon of water, boiled together until a clear, brown solution is obtained. This adheres better to the smooth skin of the onion foliage than the plain Bordeaux and is occasionally used to improve its adhering properties when spraying other plants in wet weather in several experiment stations.—ED.]

#### A Market Gardener's Claim.

There is an old Scotch saying to the effect that "greed causes grief." A market gardener at Waddington sued the Great Northern Railway Co. for £15 odd for damage by sparks from an engine to 425 roots of rhubarb growing on nine poles of land. The railway company offered £10, but that offer was rejected, and the railway company resisted the claim, which was at the rate £283 per acre. After hearing evidence the market gardener was awarded £3 10s 8d., and this sum being much less than the tender, the railway company got all its expenses. This means that instead of getting £15 18s. 9d., the market gardener, who rejected the offer of £10, will only get £3 10s. 8d., and to obtain this smaller sum he will have a bill of costs of at least £30 to pay. That market gardener is probably now a wiser and a sadder man. However, if he can realize £283 off every acre of rhubarb, he will soon make up the loss resulting from his victorious suit against the railway company.—North British Agriculturist.

#### The Melon Louse.

In Press Bulletin number 176 of the Oklahoma Agricultural Experiment Station, C. E. Sanborn, entomologist, commenting on an article in an agricultural journal, says: "The advice against planting melons in or near cotton fields, for the reason that the crop will become infested with cotton lice, is, in part, correct, but in the main misleading, and I would not recommend discontinuing the planting of melons on account of the proximity of a cotton field simply because the lice infest cotton and might move from it to the melons." This bulletin states that the best treatment for melon louse is to plant rape, which

will attract insects that feed on melon lice. The rape can also be used as hog pasture.

#### Asparagus Culture in France.

The chief difficulty in the establishment of asparagus arises, writes M. Nasier in *Lyon Horticole*, from the dioecious nature of the plants. It is not easy to distinguish the sexes at the time of planting, and the most that can be done is the suppression of inferior plants, a plan rarely resorted to. As with many other species of vegetables, culture has a great deal to do in the retaining of quality. An asparagus bed is not inexhaustible. Like other plants, asparagus has need of its stems and leaves for the nourishment of its roots and the for-

mation of shoots. To continue cutting after June 24 is to endanger the quality of the next year's crop. In many places the mistake is made of planting too deep. In no case ought one to plant anything deeper than is necessary to ensure that the roots can fulfill their functions. At Argenteuil, Cote-d'Or, Drome, and elsewhere, this is well understood. Instead of the deep trenches of former days, a depth of three inches to five inches is found to be sufficient, and, given the right sort of culture, labor, manure, well-chosen plants, and weeding, the crops are better and the shoots are finer and earlier. The next thing, which should be done about the middle of June, is to level the hillocks which have served for blanching the shoots.

## The Nursery Trade

American Association of Nurserymen.

W. P. Stark, Louisiana, Mo., President;  
E. S. Welch, Shenandoah, Ia., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-sixth annual convention to be held  
at St. Louis, Mo., June, 1911.

DR. HOWARD of the bureau of entomology, Washington, D. C., is making a tour of the European nurseries, including representative places in England, France and Holland.

WEST BERKELEY, CALIF.—John Gill, of the E. Gill Nursery Co., and Miss Caig, of Oakland, were married at San Jose, June 8. After a tour through southern California they will make their home in West Berkeley.

AMONG the new plants recently exhibited at the Royal Horticultural Society's hall, in Westminster, London, was *Robinia Kelseyi*, a native of North America, with elegant foliage and deep rose-colored flowers, produced from last year's wood. All the rose acacias are beautiful and worthy of extended culture.

IN Bulletin 145 of the Vermont Experiment Station, entitled "Vermont Shrubs and Wood Vines," there is a fine account of the shrubs and vines native to this state and a briefer mention of some introduced species of interest. The species are well described and a great number of them illustrated making it a most useful book for reference far above the average of this class of publication.

HELENA, MONT.—Cards received July 2 announce the wedding of William Ernest Mills, secretary and treasurer of the State Nursery Co., to Miss Mildred Teal, at the bride's home in Los Angeles. Immediately after the ceremony the young couple left for England. They will visit enroute at Williamsport, Pa., Walter Yeager and wife, brother-in-law and sister of the groom. On July 14 they will sail for England, where Mr. Mills has numerous relatives.

THE Delaware & Hudson Railroad has started a nursery of 18 acres near Bluff Point on Lake Champlain, where 800,000 two-year white pine, Scotch pine and Norway spruce are being planted, and 1½ million seedlings will be raised in seed beds. The trees will be planted along the line of the Chateaugay branch. Another nursery has been started at Oneonta, where 250,000 oak seedlings will be raised. The present nursery at Wolf Pond will be used for the storage of present stock—Country Gentleman.

THE American Pomological Society will hold its next convention at Tampa, Fla., in connection with the meeting of the State Horticultural Society, January 31 to February 3. The Florida society has invited all kindred associations east of the Mississippi and south of the Ohio, and also from Cuba to join in the meeting. The Pomological Society offers a number of Wilder medals, and it is expected that this fact will influence many fruit growers to show. It is 21 years since the Pomological Society last visited Florida.

# A BLUE ROSE

## The Greatest Rose Novelty of the Century

*It flowered with us this season and was greatly admired.*

The New Rambler (Violet Blue), hailed by the German rose growers as the forerunner of a genuinely cornflower blue rose, is a seedling of *Crimson Rambler*, very vigorous and hardy, and free blooming.

### Trees and Shrubs at Rochester, N. Y.

*Tilia platyphyllos* has just passed out of flower. *T. vulgaris* is now in full bloom, and *T. ulmifolia* is just beginning to blossom. *Catalpa speciosa*, which is always the first of the catalpas to flower, has been in good blossom eight or ten days and is very showy.

There are a few flowers still lingering on *Magnolia parviflora* and *M. Watsoni*. *M. glauca* is still in good bloom and how deliciously fragrant it is! *M. macrophylla* is still showing a few of its immense and showy flowers. W. J. Bean, the well known British dendrologist, and superintendent of the arboretum in the Kew Botanic Gardens, London, looked at a large tree of *M. macrophylla* in the Ellwanger & Barry nurseries the other day with profound admiration, and was much surprised to see it doing so well so far north in this country. The hybrid *M. Thompsoniana* is now in good bloom.

*Cornus Kousa*, whose flowers much resemble our native *C. Florida*, has been in flower two weeks or more, and is now passing away. This is a rare and choice arborescent shrub or small tree where it does well. It does splendidly with us on a southern slope in light, sandy soil. *C. asperifolius* is now in full flower. *C. Purpusi* is a little past its best in some situations. *C. amomum*, which flowers from four to five days after *C. Purpusi*, and in some respects much resembles it, is now in full bloom.

A number of the late-blooming spiraeas are now in flower. *Spiraea Billardi*, *S. Douglasii*, and *S. Menziesii* with pinkish red flower spikes are now in full bloom, *S. palicifolia* with pinkish spikes, and *S. alba* with white flower spikes are both in fine flower. *S. Bumalda* and *S. Anthony Waterer* with pinkish red, and red flower-corymbs are in full bloom. *S. canescens* with white flower umbels is passing out of bloom.

*Hydrangea arborescens grandiflora* is now remarkably showy and effective in bloom. *H. Bretschneideri* has been in fine flower two weeks. What a fine blooming Chinese shrub this is!

## A GOOD INVESTMENT

Evansville, Ind., Feb. 18, 1910.  
AMERICAN FLORIST Co.  
Chicago.

DEAR SIR:—I am using your Trade Directory and out of 4000 nurserymen we circularized only two circulars came back. I am enclosing these names as you may want to make the changes.

A. J. LOCKYEAR.

## Jacs Smits & Co.,

NAARDEN,  
(Holland)

Azaleas, (hardy), Berried Plants, Bleeding Hearts, Blue Spruces, Boxwood, Clematis, Climbing Plants, Conifers, Evergreens, Funkias in sorts, Hydrangea P. G., Japan Maples, Peonies, Pot-grown Plants, (Lilacs a specialty), Rhododendrons, Roses, Spireas, Valleys.

Price List Free on Demand.

It forms a handsome, spreading bush six to eight feet across, and eight feet or more in height, and the showy flat-tish white flower clusters render it most effective for garden decoration. *H. quercifolia* is just coming in bloom, but it is precariously hardy with us, and is liable to be much injured in a severe winter.

*Genista juncea* is in fine bloom just now, and is very conspicuous with its large showy yellow blossoms. *G. tinctoria* and its variety *Elatior* is in full bloom, and makes effective low yellow groups. *Cytisus hirsutus* is in full flower, and *C. leucanthus* von Schipkaensis, a low-spreading shrub with whitish blossoms, is now in full bloom and is an interesting little plant. *Amorpha canescens* with bluish lavender compound erect spikes is a little past its best. This shrub of course gives variety to a large collection but otherwise it is not particularly showy.

*Rhododendron maximum* is now in full bloom and is important when most other rhododendrons are past. *R. Govenianum* with purplish lavender

**Jackson & Perkins Company, Newark, N. Y.**

flowers is now in full blossom. This is a genuine hybrid and was raised from the seed of *Azalea nudiflora* impregnated by the pollen of a hybrid raised between *Rhododendron ponticum* and *R. Catawbiense*. This interesting plant has been in cultivation at least 75 years. *Azalea arborescens* is now in good flower, and the white flowers occasionally tinged with pink are showy. *A. viscosa* is in full bloom, and will continue for some time.

*Kalmia latifolia* has been very effective in bloom this season, and is now passing away. *Zenobia speciosa* with handsome bell-shaped white flowers has been attractive for the past week and *Lyonia ligustrina* with its clusters of whitish blossoms is now in full bloom. The dainty cross-leaved *Heath* (*Erica tetralix*) is now in bloom, and some individuals of the white heather (*Calluna vulgaris alba*) are showing a few open flowers, but it will be two weeks or more before it will be in full bloom. *Gautheria shallon* with its racemes of dainty white flowers is now in bloom. This is precariously hardy here.

*Ligustrum Ibo* and *L. Amurense* have been quite showy for the past 10 days, and are past their best. *L. Chinense* with its large white flower clusters is now very showy. This is a remarkably fine privet, but of course, it is liable to be much injured in a hard winter. A few flower clusters may still be seen on *L. vulgare*, in its numerous forms. *Philadelphus Californicus* which is the latest of the *philadelphuses* to blossom is now almost in full beauty.

*Deutzia scabra* (*D. crenata*) in its several forms has been very showy for the past week or 10 days. *D. Vilmorenae* with showy clusters of pure white blossoms has been most beautiful for the past week. This is a most important acquisition amongst *deutzias*, but it is absolutely hardy and should always be planted in what we all understand to be a well sheltered and warm situation. As it is a late flowering *deutzia* it is all the more desirable.

*Itea Virginica* is now in full bloom and its white flowers and spikes are interesting. This is a most important low shrub for its high colored foliage

in the fall. *Calycanthus Floridus* and *C. fertilis* (*C. lævigatus*) have been in bloom for some time, and the former is particularly valuable for its highly fragrant flowers.

*Rosa lucida* and its white variety (which, by the way, we strongly suspect may turn out to be a species), have been in bloom for some time, and still show a considerable number of flowers. *R. rugosa* in its numerous forms and hybrids, are in abundant bloom and have been for some time. *R. Beggereana* with white flowers has been in full bloom 10 days and is a most interesting species. *R. scalarata* with large handsome single blush blossoms has been in bloom a week. *R. arvensis*, with a sarmentose habit, and lovely white flowers, is now in full bloom. This is a native of Europe, and is very popular with all who are acquainted with it, for garden decoration, and landscape embellishment.

Designs, Estimates, Construction of Grounds

The New Jersey tea (*Ceanothus Americanus*) is now in full bloom in our woods and parks, and I think I never saw it so abundantly flowered and so effective as it is this season. B. H. Slavin, the foreman at Seneca park, called my attention to a blush form, or white flowers tinged with pink, which occurs here, the aspect of which is remarkably dainty and pretty, and it is certainly worth special selection and cultivation.

St. Louis.

STOCK POOR.

When visiting the wholesale houses during the past week we were struck with the large amount of flowers coming in, especially carnations, which are of very poor quality. The blooms are small and lack vitality. Many shipments arrive in a sleepy condition and are unsaleable and very unsatisfactory to the wholesaler who tries his best to dispose of the stock. There must be gluts but in mid-summer surely the growers could curtail the supply by shipping only the best of the cut and leaving the poorer stock at home. Roses show the effect of the warm weather; even Beauties show weakness and do not keep well.

### NOTES.

Don't forget the florists' picnic July 21. Chas. Schoenle, Frank Fillmore, Henry Ostertag, J. J. Benke and all the old school will be there; every one invited. The following is the lineup for the ball game:

|                 |                |
|-----------------|----------------|
| Sanders—        | Bentzens—      |
| Colle .....     | Catch .....    |
| McCann .....    | Pitch .....    |
| Kelly .....     | 1st B. ....    |
| Sanders .....   | 2nd B. ....    |
| Heapes .....    | Short S. ....  |
| Morgan .....    | 3rd B. ....    |
| Eggsicker ..... | L. field. .... |
| Sanders .....   | C. field. .... |
| Kurtz .....     | R. field. .... |
|                 | J. Bentzen     |
|                 | J. Munzberg    |
|                 | E. Gaffney     |
|                 | F. Maloney     |
|                 | G. Shinn       |
|                 | J. Keenoy      |
|                 | W. Bentzen     |
|                 | E. Maloney     |
|                 | A. Miller or   |
|                 | C. Bentzen     |

Umpire, G. Froning.

The baseball game it is said will be a corker. The Sanders team seems to be a very formidable aggregation, but Bentzens claim they are only on paper. Schriener, Oscar Heuttamann and George Schriener expect to do some umpiring; at least they say so.

The next meeting of the Florists' Club will be a very important one. Nomination of officers and information as to transportation for S. A. F. convention at Rochester will be included in the business.

The Riessen Floral Co. did all the decorating at the farmers' banquet; a decoration of bay trees mounted and arranged was a special feature.

Young & Son's windows have a fine show of chickens and a miniature lake with water plants which forms a very pretty scene.

C. A. Kuehn is a rooter for the Cardinals and is a visitor quite frequently to the ball park on Sundays and holidays.

F. H. Weber will soon take a vacation. He will probably tour in his car as he is an enthusiast in this line.

Geo. Waldbart will take a vacation shortly. He expects to go to San Francisco.

W. F.

ERIE, PA.—C. C. Yost has purchased a new Overland touring car.

Cincinnati.

TRADE QUIET.

Business is quiet; in fact there is hardly anything to report except that about two-thirds of the flowers received are carted to the dump or find their way to the hospitals. The intense heat had a telling effect on roses and carnations and very little choice stock is to be had in either line. An abundance of Longiflorum lilies and Shasta daisies were to be had, also very good valley and sweet peas, but, as before stated, business is quiet and the buyers do not take up over one-third of the flowers coming in. There is a fair demand for green goods of all kinds and an ample supply.

### NOTES.

The Murphy family picnic, an annual event, was held on July 4 at St. Joe. At this picnic all of Murphyville turns out and there is always large doings and an enjoyable time. Will Murphy, who by the way, celebrates his birthday on July 4, was master of ceremonies.

Arthur Becker of the Avondale Floral Co., leaves July 8 for Los Angeles, Calif., to visit his brother. Arthur says if the country suits him he might locate permanently, but we hope not, as we would miss his smiling countenance and original sayings very much.

H. B. McCullough and wife and their two children left for Niagara Falls on Thursday. They go as far as Cleveland in their auto, and from Cleveland

### New Orleans.

The past month has been fully up to the average so far as store trade is concerned. Perhaps the crop of weddings was not quite so large as usual, but graduation work kept all hands busy for quite a while. Then the trade in funeral designs has been heavy. While high priced designs have been few and far between, the amount of other grades has made a respectable total. The plant trade is virtually over for the season. Single tuberose and Speciosum lilies are in evidence now and late plantings of gladioli are just coming into bloom. Asters are not very plentiful yet, but the next two weeks will see them at high tide.

The last monthly meeting of the Horticultural Society was well attended and very interesting. In the absence of President Alost, who is in Europe, E. A. Baker was called to the chair and kept business moving without a hitch. It was decided to have the annual outing at one of the lake resorts on the afternoon of the next monthly meeting when the new officers will be elected. A banquet will follow the meeting, and a good time is assured. Virgin had asters, Speciosum lilies and Iris Kaempferii on the table and Newsham had spikes of Oncidium leucochilum and O. Wentworthianum Abele Bros. showed a nice sport of Nephrolepis Barrowsii which was finely tasseled on the ends of the fronds. They have quite a stock of it and claim that it does not revert. N. Barrowsii grandiceps would be a good descriptive title for it. It is quite distinct and showy. Two new members applied for admission to the society which is increasing remarkably in numbers.

X.

### Lexington, Ky.

Business conditions are about as good as can be expected for this time of the year. We are experiencing some real hot weather now. The thermometer registers anywhere from 80° to 90° in the shade every day. Cut flowers are in good supply. Roses are in fairly good supply and they retail for \$1-\$1.50 per dozen. The varieties most plentiful at present are Killarney, Kaiserin and My Maryland. Carnations are good and plentiful for the time of year and they retail for 50 cents per dozen. Some good gladioli are coming in to this market and they bring \$1-\$1.50 per dozen spikes now. Lilies are in good supply and sell for \$3 per dozen. Sweet peas are abundant at present and are slow sellers as every one seems to have them by the thousand. Snapdragons,

# WE TAKE THE LEAD

In what? What a foolish question! Don't you know? Didn't you hear of **GODFREY ASCHMANN**, the great *Araucaria* Importer, Grower and Shipper? These so well favored, everlasting green decorative plants, the *Araucaria Excelsa*, *Robusta Compacta* and *Excelsa Glauca*, are in favor more than ever this year.

This is our 25th anniversary since we began importing *Araucarias*. Watch! See us grow! Beginning 25 years ago with 100, our this year's (1910) importation is 10,000, and more are coming this fall after I have made my selection of the choice of the choice on my trip to Belgium; the growing district of the world in *Araucarias* and *Azaleas*. The trade is well informed that for many years past I go personally to Belgium to protect and select for my customers the best of *Araucarias*, *Azaleas*, *Palms*, etc., that cash can buy there. Empty houses won't pay. Now is the time to fill your empty houses with something to grow into money while you are asleep.

Remember, it is the wideawake man that is not afraid to invest a dollar that makes the money. Please look at our special low prices for superior stock.

**Araucaria Excelsa**, raised from top cuttings, no seedlings. Plants, 5-5½-6-7 in. prts. 12-15 18 20-25-30 in. high. 3-4 5-6 tiers 2 3-4-5 years old. 35c. 50c 60c. 75c \$1.00. \$1.25 to \$1.50 each.  
**Robusta Compacta**, *Excelsa Glauca*, 6 in. pots, \$1.00 to \$1.25 each.  
**Kentia Forsteriana**, in fine shape, 6-in. pots, 30 35-40 45 in. high 4-5-6 years old. 75c. \$1.00. \$1.25 \$1.50 \$2.00 to \$2.50 each.  
**Kentia Belmoreana**, 25-30-35-4 in. high 5-5½-6-7 in. pots. 5-6-7 years old. 50c. 75c. \$1.00. \$1.25. \$1.50 to \$2.00 each.

**Kentia Belmoreana**, 2½ to 3 in., 10c each.  
**Standard Bay Trees**, 1 foot tubs, 7 ft. high from bottom up, \$8.00 per pair.  
**Sago Palms**, ready July 15 6-7-8 in. pots, from 5 to 20 leaves 10c per leaf.  
**Cocos Weddelliana**, 3 in. pots. 18c to 20c.  
**Nephrolepis Whitmanii** Boston and Scottii, 4 in., 20c; Scholzei 4 in., 25c; 6 in., 40c.  
**Begonia Gloire de Lorraine**, deep pink, 4 in., 25c.  
**Begonia Lonsdale**, pale pink, 4 in., only 25c.  
**Begonia Vernon**, pink and red, 4 in., 7c.  
**Begonia Flambeau**, 6 in. 25c.  
**Fuchsias**, in bloom, assorted, 4 in., \$7.00 per 100.  
**Cannas**, Richard Wallace (best of the red), J. D. Fisele (also one of the new best reds), large 4 in., \$7.00 per 100.  
**Scarlet Sage**, Clara Redman, 4 in., 7c.  
**Verbenas** and **Phlox Drummondii** and **Single Petunias**, in bloom, 3c.  
**Double Petunias** 4 in., in bloom (red or pink), 7c.  
**Coleus**, Golden Buzzer, Queen Victoria, 2½ in., 3c.  
**Dusty Miller**, for edging, 3c.  
**Lobelia**, blue, dwarf or trailing, 3c.  
**Summer Chrysanthemums** or **Paris Daisies**, **Acalypha** and **Nasturtiums** (dwarf), **Tradescantia**, **Ground Ivy** (variegated), 2½ in. pots, 3c.  
**English Ivy**, 3 in., 5c.  
Our well known **Moonvine**, 4 in., 10c; 2½ in., 5c.  
**Primula Obconica**, best strain, 4 in., 10c; 5 in., in bloom, 15c.  
**Double White Geraniums**, in bloom; also **Lantanas**, **Heliotrope** and **Ageratum** (blue), 7c.  
**Cosmos**, separate colors 2½ in., 3.00 per 100.  
**Running Roses**, such as **Crimson Rambler**, **Dorothy Perkins**, **Lady Gay** 6-7 in., pot grown 35c, 40c and 50c.  
We have an unsurpassed strain of **Solanum Multiflorum** (Jerusalem Cherries). Can offer only a limited quantity. 2½ in. pots, \$5.00 per 1000.  
Cash with order, please.  
All plants must travel at purchaser's risk.

## Gloire de Lorraine

Fine Stock, from 2½-in. pots.

Doz., \$2.00; per 100, \$15.00; per 1000, \$140.00.

**VAUGHAN'S SEED STORE**  
25 Barclay St., NEW YORK. 84-86 Randolph St., CHICAGO.

stocks and other flowers are plentiful at present and are not called for much. Asters will be in before many more days and it is reported that they will be plentiful this year. Green goods are in good supply. All are busy planting chrysanthemums and most growers have finished planting roses and carnations. Taking everything as a whole, stock is in very good condition this year.

### NOTES.

Work is going on rapidly at the J. A. Keller estate and much repairing is being done at that place. Five thousand chrysanthemums have been planted here and the stock is in excellent condition. J. Ferdinand Keller, the manager, is contemplating a trip to French Lick Springs, Ind., in a few weeks.

It is reported that Anderson & White, the lady florists on Georgetown street, are going to erect a conservatory in a few weeks.

# Vaughan's Giant Pansies

**10 per cent special CASH DISCOUNT.** On orders over \$2 for Flower Seeds if cash is enclosed, **10 per cent.** The discount does not apply to Asparagus Seed. Cash discount on this is 2 per cent.

## VAUGHAN'S "ELITE PANSIES."

This is not a complete mixture like our International; it does not contain any pure white, yellow or any self colors. It is comprised of the cream of four Pansy specialists' choicest and most expensive mixtures. Trade pkt., 50c; ½ oz., \$1.00.

## VAUGHAN'S PREMIUM PANSY MIXTURE.

Embraces all the varieties of the Fancy German Sorts. We have sold this mixture for the past seventeen years, and it has given general satisfaction. Per pkt. 25c; ½ oz., 75c; ½ oz., \$2.50; oz., \$5.00.

## IMPROVED GERMAN MIXTURE.

This is a mixture of three strains from different German growers, and is made up mostly of separate colors, with a sufficiently large percentage of white and yellow. Per large pkt., 10c; ½ oz., 20c; ½ oz., 30c; oz., \$1.00.

## VAUGHAN'S INTERNATIONAL PANSIES.

Vaughan's International Pansy Mixture was first prepared and offered by us in 1889. We import from all the best European sources, and personally inspected the fields of French and German specialists of their finest strains. Each year has added to the quality of its flowers, the variety of its colors. We buy every year novelties of known merit to improve the mixture. This is the reason it is always complete, always the latest and always the best mixture AS WE BELIEVE. We add to all the Pansy Mixtures, which we now buy more than fifty per cent of choicest named kinds obtainable, each in rightful proportion. We thus know what it will produce. This is one of the SPECIALTIES which has established and held the reputation of Vaughan's Flower Seeds and this is one which we maintain most carefully, not alone as to quality, but in vitality and germination. You are beginning right in Pansy growing when you start with Vaughan's International Mixture. Trade pkt., 50c; ½ oz., \$1.50; ½ oz., \$5.00; oz., \$10.00.

## VAUGHAN'S CUT FLOWER MIXTURE.

This mixture is put up by ourselves and contains mostly light colored sorts. We have sold this mixture for several seasons to some of our Chicago cut flower growers, who have realized big returns from the sale of the flowers. Pansies are as easily grown as violets, require less care and bring better returns. Trade pkt., 50c; ½ oz., \$1.00; ½ oz., \$2.00; oz., \$5.00.

## VAUGHAN'S "GIANT PANSY MIXTURE."

Embraces besides all the separate shades and colors, five special strains not listed elsewhere, and which can only be had in this and our International mixture. This mixture includes the richest reds, coppers and bronzes, together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain. Trade pkt., 25c; ½ oz., 60c; oz., \$4.00; ¼ lb., \$14.00.

Our list of "Seeds for Summer Sowing" now ready; if you have not received a copy please write for same.

## PALMS, FERNS AND Decorative Plants

**JOHN SCOTT,** Rutland Rd. & E. 45th St.  
BROOKLYN, N. Y.

**EDELWEISS** (*Leontopodium alpinum*)  
—In *Le Moniteur du Jardinier*, Mons. F. Comte gives a useful account of the method he adopts for the successful cultivation of this plant. The seeds, when sown under glass, germinate very rapidly in sandy, well-drained soil, but the young plants are exceedingly liable to damp off soon after the appearance of the cotyledons. To avoid this difficulty the young plants should be pricked out very carefully as soon as possible after the first leaves are developed and kept somewhat dry. After the growth of five to eight leaves the plants may be transferred to small pots and placed outdoors in a sunny place as soon as they have recovered from the necessary disturbance in the potting operations. After the first frost in autumn they are best removed to a cool greenhouse, where they should be kept dry all the winter, little or no water being given them until the small, white central bud shows signs of awakening in February or March. Soon after this they may be planted out in the rockery or open border in a warm, sunny aspect, care being taken to supply lime to the soil; un-

## Heacock's Large Palms in Cedar Tubs—Dur- able, Serviceable, and Good for Lots of Rough Handling.

The "Heacock Way" of growing Palms means a lot more than developing perfect plants, though we're proud enough of that. It means growing them—the large sizes especially—in substantially-built tubs of Virginia cedar, well-hooped and neatly painted. We have found, by careful trial, that the larger sizes do better in tubs than in pots, and hereafter will supply our Kentias, in 7 inches and above, in these cedar tubs.

You will appreciate this fact because you can handle the outfit as you please, without danger of breaking it; you can carry it around by the top with the assurance that the tub won't fall—and you know that a plant never fits rightly, once the pot has come off. Therefore the "tubbed" palm grows, and ships, and handles, better than the potted one, and gives better satisfaction in every way. Your customers, too, will find them just as ornamental as jardinières, and easier to handle.

Putting our palms in tubs because it makes them grow better, is only a single instance of the pains we take to grow Palms that will really succeed—make money for you and please your trade. The fact that we have been serving the same customers season after season for years, and that we are continually adding to our list of new ones, rather indicates to us that our palms are what the trade wants. Are you with us? If not, we'll welcome an opportunity to demonstrate!

"When in Philadelphia be sure to look us up"

**JOSEPH HEACOCK CO., Wyncote, Pa.**

### Frederickton, N. B.

Cool and wretched weather has been the general expression of most people for the last month or so here, although it is sure to suit some things, such as grass, lettuce, celery, the cabbage family, etc. Strawberries are just getting ripe and look promising for a big crop, both wild and cultivated. The trade in plants and cut flowers is near at an end, as the schools are just closed. The two florists here, Bebbington & Son and Miss Schleyer, seem to be satisfied with the demand, although annuals have been less called for of late years. Asters and pansies seem to be the most popular here in Frederickton. After our hotbeds have been emptied of lettuce and radishes they are filled with musk melons, or, as some persist in calling them, "cantaloups," and cucumbers. The former seem to sell when matured about September 3. The cucumbers, although cheap, seem to be relished by the help, as they are fresh and get them gratis mostly. These come in July and August, when the temperature is higher. Our peonies are just in bloom. We were highly interested in your report or description of Boston peony show and society, although the weather, like our own, was unfavorable. We feel like recalling some 40 years' past experience when your correspondent was an employee in the establishment of C. M. Hovey, Cambridge, who was a great enthusiast, and also a commercial pioneer in importing a fine collection of both tree and herbaceous specimens. Messrs. Hovey, so far as I know, had an acre all named and made a sensational show about June. H. H. Hunnewell of Wellesley was the large-

**POEHLMANN BROS. CO., Morton Grove, Ill.**

est private orchid grower, although Messrs. Hovey had a small collection and were very prominent in camellias azaleas and agaves, having thousands of the latter. C. M. Hovey had a wonderful retentive memory, was a living cyclopedia of knowledge on horticulture and floriculture, could recall any plant, tree or flower for 50 and 60 years past if engaged in a conversation on the subject. J. B.

SAVANNAH, GA.—John Wolf has suffered quite a serious loss in the fire at the building in which his retail stand was located. The whole place was burnt to the ground and he will have to move to other quarters until the place can be put in working order again. About \$500 damage was done and Mr. Wolf carried no insurance. It will make no difference to his wholesale business.

## The Newer Lillacs.

Of all spring-flowering subjects in the garden none are more appreciated than the lilac. Even the ordinary form of *Syringa vulgaris* is lovely, but when we consider the great improvement made in varieties during the last 15 years, or even less, one cannot wonder at the appreciation the newer forms find with those who are conversant with them. Most of these have larger panicles of bloom, while the individual flowers are of greater size and better form than in old varieties, and the colors are more intense and varied.

As an illustration we may take the variety *Souvenir de Louis Spathe*, and compare it with the type, or even with *Charles X*. In the newer variety the color is again intensified, but even this is superseded by *Negro* in point of color, for the latter retains its purple blue color for a longer time; individually, too, the blooms are larger.

Of double and single-flowered varieties it is an easy matter to select four dozen that are quite distinct, and this is quite ample for even a large collection. But seldom do we see lilacs given a fair share of attention; too often they are crowded in the shrubberies, and more often than not given a position under tall forest trees, where they struggle on, and seldom have a chance to display their beauty of color and form.

To grow lilacs well abundance of space should be provided, in order that the growths may become properly ripened each season, this being necessary to ensure freedom of flowering. Deeply-dug and well-manured stiff soil will grow lilacs to perfection, provided they receive other attention, such as the removal of suckers, which too often spring from the common stock upon which the choicer varieties are grafted. The removal of weakly shoots to insure the perfect maturation of the stouter ones is also necessary, and copious supplies of liquid manure in May, when the panicles are developing, is of great assistance in increasing the size of the blossoms and improving the color. Newly-planted bushes should be pruned to within an eye or so of the base with a view to secure a dwarf specimen of good shape, as some varieties are apt to run up in an ungainly manner. The following are a few of the newer varieties worthy of any collection:

## DOUBLE-FLOWERED VARIETIES.

It seems difficult to realize a finer white-flowered lilac than *Madame Lemoine*, but the newer variety—*Miss Ellen Willmott*—is a distinct advance in purity of color and size of the individual blossoms. The panicle in *Madame Lemoine* is perhaps longer, and the newer variety is later in developing its flowers, which is an advantage, as the season is thus extended. *Jeanne d'Arc* is a desirable sort where greater variety is required. *President Loubet* has carmine buds and deep purple-red flowers. *Waldeck Rousseau* is a charming variety, with extra large flowers of a rosy-lilac color, becoming white towards the center. *Maurice de Vilmorin* has a thick panicle, and the buds are attractive by reason of their

BYER BROS., Chambersburg, Pa.

rich red color, but when expanded they are blue with a white center. Dr. Troyanowsky has enormous panicles of rosy-pink buds, but the flowers are azure-blue when open. *Comte de Kerchove* is free-blooming, and a showy variety with rich red buds and rosy-pink flowers. *Madame Jules Finger* is very fragrant, with satin-rose flowers. *Condorcet* has the largest panicles of any variety, and the flowers are a lovely shade of blue. *Marc Micheli* has pink buds that open into blue flowers. *Souvenir de L. Thibaut* has rose-colored buds, with a purple-shaded blue flower.

## SINGLE-FLOWERED VARIETIES.

*Othello* is quite a superior variety, and the blooms are so placed that they do not overlap each other, which gives it a distinct and desirable appearance. The deep claret-colored flowers have a red border, but when open are pale red. *Uncle Tom* is of a deep violet-purple. Dr. *Mirabel* has tall, erect panicles of claret-colored buds, opening into purple-lilac flowers. *Gloire de la Reine* has red buds, changing to violet. Professor *Stockhart* is a lilac shade of blue. *Gloire de la Rochelle* has rosy-lilac flowers, changing to a light shade of blue.

**C. EISELE,**

11th and Westmoreland Sts. Philadelphia, Pa.

West Pullman, Ill.

J. M. Cochran and J. McKay, 448 One Hundred and Nineteenth street, have dissolved partnership, Mr. Cochran buying out the latter, who returned to his home in North Tonawanda, N. Y. Two new houses, 21x121 feet, have been built the past winter. They were bought from the King Construction Co., North Tonawanda, N. Y. The houses are made of iron and concrete; concrete walks will be put in next week. Mr. Cochran, who looked after the erection of the houses, stated that they cost him about \$6,000. Two hundred fern and asparagus baskets, averaging 75 pounds apiece, hang from the roof, just low enough to be watered and high enough to be out of the way. All the posts are between the two houses and these serve as drain pipes and carry off all the water that comes into the drip gutters. A ventilating machine opens and closes all the shutters at once; all that is necessary to close the shutters is to start the wheel, the weight of the sash closing the shutters. Instead of using moulds to make the concrete posts for the benches, a board 7½ feet long, one inch thick and four inches wide was used, and two small pieces of board were nailed to this strip 2½ feet apart to stop off the posts, which were 2½ feet long, and also gave a place to nail the other board, which is continued in the same manner. After 16 of these were made to make 48 posts, a board was nailed on each side and the cement poured in. A level place eight feet square was used, and after the cement remained in this position until hardened the blocks were taken out and the same process gone over again. The posts cost five cents apiece and also saved buying moulds, and enough posts could be made at one time that were necessary to be used in the greenhouses. The walks were left a little wider than usual, so as to throw enough light on the plants which were placed under the benches. In fact, Mr. Cochran has double-decked benches in his houses. The old houses are empty, while the new ones are filled with ferns. There is 10,000 feet of glass on the premises.

Julius Zschau, 11146 Michigan avenue, Roseland, reports business as

**J. D. THOMPSON GARNATION CO.,**  
JOLIET, ILL.

being rushing. A new residence is being built at 3539 E. One Hundred and Second street, on the same premises occupied by the greenhouses. The new residence is built of concrete blocks and will be completed within the next month. Three new greenhouses will also be built, one 25x100 feet, the other two 25x65 feet. One of these will be used for a palm house, which will be connected to the residence. Mr. Zschau, who is the pioneer florist of Roseland, will superintend the building of the houses and the material will be purchased from the J. C. Moninger Co. At present the family are living at 11146 Michigan avenue, where the retail store is located.

John Van der Wal, One Hundred and Fourth street and Michigan avenue, Roseland, tore down all his old greenhouses and is busy putting up new ones. He formerly had 5,000 feet of glass, but when the new houses are completed he will have upward of 15,000 feet. Mr. Van der Wal is looking after the work himself. The material was bought from the Foley Manufacturing Co., Western avenue and Twenty-sixth street, Chicago. The houses will be built of concrete walls and posts and will be ready for fall planting. A new boiler will also be installed. Mr. Van der Wal does a wholesale business, but expects to do all retail in the near future. John Van der Floeg is employed as grower.

HAGERSTOWN, IND.—Mrs. Laura A. Grills says that an extremely late spring caused a great rush for some time but "the crest of the wave is now passed." Trade has been very good here.

FITCHBURG, CALIF.—K. Shinoda has a neat plant here of about 30,000 square feet of glass and grows for the wholesale trade only. Seven houses are devoted to ferns, two to carnations, and the balance to roses, such as Kaiserin, Moulton, Bridesmaid, etc.

## WOOLSEY,

**The Florist,** **ROCKFORD, ILL.**

**Hartford, Conn.**

It was rose night at the meeting of the Horticultural Society in the county building, June 24, and those who were fortunate enough to attend were amply repaid by the large display of roses shown by President Huss, from the James J. Goodwin grounds, Alex. Cumming, Jr., head gardener at Elizabeth Park, and Gardener Mason, of the private gardens of the Pope place in Farmington.

The collection of roses included every known color, even the celebrated "blue" rose being among them, but it was hard to see how it could be called blue. President Huss made some interesting remarks, and called particular attention to *Rosa centifolia*, the oldest known rose in existence which can be traced back 2,000 years, a fine bunch of which was in his exhibit. It is a beautiful pink, very double and very fragrant. John Gerard, of New Britain, showed a dozen varieties of Japanese iris, of gorgeous colors. The paper read by Alex. Cumming, Jr., head gardener at Elizabeth Park, was vigorously applauded and a rising vote of thanks was extended to him.

## King Iron Frame Greenhouses

"Ask the Man Who Has One."

Robert Scott &amp; Son, who have a range of King Iron Frame Houses, write as follows:

SHARON HILL, PA., Feb. 7, 1910.

Gentlemen:—

I am very much pleased with the five houses of the King Iron Frame Construction that we put up last fall. They are strong and light and we think so well of them that when we build again that is the construction we shall use. We are planting this section in concrete solid beds and if you are near Philadelphia in May and you can call on us, we think you will tell us that it is a good advertisement for your Iron Frame Construction in this part of the country.

Yours very truly,

ROBERT SCOTT & SON, (Signed)  
Alexander B. Scott.

Messrs. Scott &amp; Son have recently placed with us an order for another large addition to their plant.

Send for Bulletin No. 35 which describes

The King Iron Frame Construction.

KING CONSTRUCTION CO.,

North Tonawanda, N. Y.

## Have You Ever—

Talked with a brother florist who uses Morehead Return Steam Traps?  
If not, do so at first opportunity and be convinced that you must install one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

## "GREENHOUSE MATERIAL"

### May Flowering Tulips.

It is a mistake to plant the May-flowering tulips in ordinary flower beds, where they have to be lifted directly they have passed out of flower to provide room for the summer occupants. They are not only not seen under the best conditions when used in this way, but, what is worse, the bulbs generally are of little value the following year, owing to having been disturbed before growth was properly completed and the bulbs matured. A permanent position should always be selected for them, as the bulb garden proper, or established in the herbaceous borders, and when massed in fairly large clumps, they are unsurpassed during May for brilliancy of color or for cutting.

In planting a collection of these, it is best to prepare the ground thoroughly first, as it is not desirable to disturb the bulbs afterwards. In selecting the different sites, it should be remembered that many of the varieties send up flower-stems nearly a yard high; therefore, when planting in the mixed borders, they should not be placed too near the front. It is always advisable to have the different varieties distinctly labeled; and to properly mark the exact spot where the bulbs are situated, it is a good plan to drive in a strong stake, that will stand out of the ground a few inches, and which is stout enough to last for several years. Having marked the position in this way, from 12 to 30 bulbs may be planted round each stake, allowing, say, four inches space

between each. Clumps formed in this way are easily supported to one neat stake before the tall flower stems are fully developed, to prevent them being twisted about by wind, which is not convenient to accomplish when each plant is separated some distance from its neighbor, while, being massed, they present a more pleasing feature. Another point in connection with these tulips is that they flower freely in the open during May and early June, when it is yet too soon to expect much variety from the open borders, and, moreover, they travel well and last a considerable time in a cut state—Gardening Illustrated

GREEN BAY, WIS.—Carl Meier & Co. are about to erect two greenhouses on the site of the old ones on South Webster avenue, these and the office having been removed. The new office will be located elsewhere. Iron frame and truss construction will be used.

HOUSTON, TEX.—H. H. Kuhlmann has at least beaten his own record for taking care of a number of weddings in one day and probably that of many other florists. On June 18 he had 17 weddings to furnish bridal bouquets for, and at most of these he also furnished palms, ferns and other cut flowers.

### Indianapolis Notes.

Arrangements are being made by  
the State Florists' Association to hold a  
flower show in Tomlinson hall  
from November 8 to 12. This will  
be the first flower show in five years.  
The preliminary premium list for the  
show carries about \$2,000 in prizes,  
and it is expected that special fea-  
tures will be added, which will run  
the total far above that sum. The  
individual prizes have been made  
liberal to attract exhibitors from dis-  
tant places. One class for American  
Beauty roses alone carries \$240 in  
prizes. The board of managers for  
the show is as follows: J. S. Stuart,

## The Mastin Automatic Whitewash and Spraying Machine Is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass.  
The pump is of brass throughout, simple and powerful.  
The mixing device keeps the contents of the tank well stirred up from  
start to finish.

When the machine is filled to within six inches of the top, a few strokes  
of the pump will compress enough air in the tank to produce a continuous  
mist-like spray for 15 minutes.

All parts are made to gauge and may be had for repairs.

Ask your dealer about our **Extension Hose, Extension Rods,**  
and the **Mastin Whitewash Nozzle** for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

### Pot Roses After Flowering.

Far too frequently our pot roses get neglected as soon as flowers come in from the open. At this time the main crop of flowers under glass is over, but that is no reason why the plants should not receive continued attention. In fact, neglect at this stage will certainly result in unsuitable growth for future forcing. Cut away weakly wood and let the plants be stood in a sheltered position outside, giving proper attention to watering and making sure hot sunshine does not come full upon the pots. This and drying winds are very injurious to the roots. Either half plunge the pots or place a board around the exposed outsides; the inner plants will protect one another. I notice this neglect with far too many plants after their present charm is past, and one cannot reasonably expect the after-results to be in any way satisfactory. When they are fairly ripened and have had a few weeks' rest, some may be repotted and others have their drainage overhauled. By removing a little of the surface soil, so far as can be done without injuring the roots, a very beneficial mulch of fresh compost can be applied which will be a great help to new roots later on.

By resting the plants as much as possible during the summer months we lay up better forces for late winter or very early spring roses. Most growers find that to get good roses from Christmas until the first come in again upon sheltered walls, the plants must have as much rest as possible during the hot days of summer. We find this resting takes place naturally in the Riviera, where from May until September the roses lose many of their leaves and are almost dormant. It is this condition our pot roses should be encouraged towards during the summer. Then if we prune and repot as may be necessary in October, they will come on by steady treatment and be far more amenable to winter forcing. The chief points are to keep them in steady growth until the buds have formed, after which a little more heat will be helpful and few flowers are more acceptable than a good rose in the dead of winter. Nor can we lay too much stress upon the advantage of growing those varieties that have fewer petals and, consequently, expand more freely than the double flowers, which fail even in summer if the weather is not bright and dry. Killarney, Safrano,

Sunrise, Mme. Falcot, Richmond, Betty and flowers of similar structure are the best for our purpose.—The Garden.

### Seed Corn and Burrowing Animals.

T. H. Scheffer, of the Kansas Experiment Station, has tested various treatments of seed corn to protect it from burrowing animals. He finds that kerosene, crude petroleum, copers, crude carbolic acid, fish oil, and spirits of camphor, when used in sufficient quantity or strength to impart an odor to the corn, seriously injure the germinating powers of the grain. To treat the seed with any of these substances in such small quantity or dilute form as not to injure the germ is a waste of time, for the slight taste or odor imparted is soon dissipated in contact with the soil.

Mixing pulverized gum camphor with the dry grain and storing it in a closed vessel for some days has been recommended as an efficient treatment, but it imparted little or no odor to the grain and gave only negative results in the Kansas experiments. Pine tar gave a strong odor but made the grain too sticky to work in a planter. Of the substances which gave promising results: Coal tar makes an ideal coating of a rich brown color and a persistent gassy smell. It dries nicely, is not in the least sticky, and will work well in a planter. Wet the grain with a little warm water before stirring in the tar. A teaspoonful of the latter will be sufficient for a peck of corn. The mass must be thoroughly mixed and then dried before attempting to plant. Soaking corn in strong tobacco decoction for a few hours, or simply wetting it with the liquid, seems to promise good results. Of course, the grain must be thoroughly dried before planting. It will have a strong odor and will not be sticky.

The observations of the Kansas station indicate that field mice are the chief offenders in the matter of destroying seed corn and that moles rarely or never do any damage of this kind. The bureau of biological survey of the Department of Agriculture recommends preventive rather than corrective measures in dealing with field mice. Among the measures recommended for this purpose by the survey are the following:

(1) Protection of the natural enemies of field mice, particularly owls.

most hawks, shrikes, snakes, skunks, badgers, and most species of weasels.

(2) Elimination of the breeding grounds of field mice by draining swamps and cleaning waste places that afford the animals harborage.

(3) Periodic plowing of grass and other lands for the rotation of crops.

(4) Clean cultivation of corn and all other crops, and especially of orchards and nurseries.

(5) Clean mowing of grass lands and permanent meadows, so that no old grass is left over winter.

(6) Careful burning about orchards and gardens of weeds, trash, and litter of all kinds that may serve the animals for winter shelter.

(7) When necessary, the burning of dead grass in meadows and pastures. This, however, should not be delayed till late spring, when ground birds are nesting.

Alfalfa or crushed wheat poisoned with strychnin have also been successfully used by the survey in destroying the mice. The details of the methods employed are given in the Yearbook of the Department of Agriculture, for 1908, page 431.—Experiment Station Work.

### Nut Notes.

Through the southern states no fruit or nut tree is better adapted for general planting or more worthy of careful cultivation than the pecan. It is to the south what the apple is to the north—worthy of a place in every fruit-garden, on every lawn, and the most important tree from the standpoint of the orchardist. The pecan fits well into the general farming of the regions to which it is adapted. It must be planted farther apart than other fruit trees, leaving ample space for the cultivation of general farm crops. These crops may be grown advantageously, with benefit to the trees, and will more than cover the cost of maintenance, until the latter commence to bear.

Not till within recent years were the arts of budding and grafting common pecan trees with the finer sorts, worked down to the point of practical utility. Years of patient experiment were required and other years of watching and waiting. The degree of success that has been attained furnishes ground for a just pride, if not a pardonable vanity, on the part of the pioneers in the new industry.

Traveling Ferns.

Among the fern lovers' most delightful experiences is always numbered his first sight of the curious little walking fern. The ordinary observer, used to our common ferns, would never think of classing the long tapering, entire fronds of this species with the others, but the botanist is always on the lookout for it. Its rarity, too, adds to the charm of finding it, for the plant rather prefers calcareous rocks and is not to be found in every locality. On damp, shaded, limestone rocks, however, it is fairly common, often covering the slopes of mossy ledges. Like most ferns it bears numerous spores, but the plant does not depend upon spores alone for its propagation. The slender tips of the fronds bend over, touch the ground, take root and the walking fern has taken another step and also produced a new plant. In consequence of this fact, the walking fern is justly celebrated, but it is not the only fern that seems to have a suspicion that spores cannot always be depended upon and has adopted other ways of getting on in the world. The process of producing ferns from the spores is a long and tedious one and several ferns have found a quicker way.

That lusty giant the ostrich fern (*Struthiopteris Germanica*) sends out long subterranean stolons that come up at some distance from the parent plant and produce new ferns to continue the race. Still another method has been adopted by the bladder fern (*Cystopteris bulbifera*). Instead of either rooting fronds or stolons, (which may be considered only another form of rooting frond) this fern bears small bulbils on the under side of the pinnae. These finally drop to the ground and a new fern is the result. That the bladder ferns' method is capable of being improved upon is shown by an exotic fern rather common in cultivation. This has gone a step further and produces a row of small ferns on the rachis of each frond. In the course of time the fronds become prostrate and each row of ferns is ready to set up in business for itself.

There is another class of ferns that multiply by division. This is a division not of the crown or

Chas. T. Siebert, Baum & Beatty Sts., Pittsburg.

fronds but of the underground rootstock or rhizome. All these are great travellers but not after the manner of the walking fern. A good example of this class is the brake or bracken (*Pteris aquilina*) whose slender rhizome dodges under roots and stones to send up a new fern, perhaps 60 feet away. Here and there the rhizome branches and the new ferns spring up in all directions. In much the same way the sensitive fern (*Onoclea sensibilis*) progresses except that it grows slower and the rootstock is nearer the surface. The branching rhizomes of the common polypody (*Polypodium vulgare*) creep along on the surface and as befits a fern whose fronds survive the winter, are clothed with rusty scales. Shirley Hibberd writes in the "Fern Garden" concerning this fern "You may cut or pull to pieces this tuft almost ad lib., provided each separate portion has its own roots reserved to it." Each piece will form a new fern. The common maidenhair (*Adiantum pedatum*) grows in the same way. Plant a single frond with its bit of rootstock in the spring and before summer has passed it will increase to a dozen or more. It is generally true that those

NEW YORK

**MASTICA** is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. **Lasts longer than putty.** Easy to apply.

plants which produce a circle of fronds from a central crown do not move about; the wanderers are for the most part those species that send down roots, push the rhizomes outward and send up fronds at intervals all summer.—*Fern Bulletin*. (Reprinted from *Linnaean Fern Bulletin* No. 1, pages 9-11.)

### The Peony's High Position.

The peony has always held a high position among plants. Even in China, its original home, where it is patronized by the emperor himself, its price was at one time so high that it was known by the name of "one hundred ounces of gold." Subsequently the ceilings, the wainscots, vases, and furniture of the Chinese were decorated with this plant. The Chinese prefer the self-colored varieties and train them in the espalier form, so that every bloom may be brought to the front to show the fullest effect of its brilliancy.—*Washington Times*.

## HALF HOUR CHAPTERS FOR FLOWER GROWERS

### Stevia.

Any small plants of stevia still out of boxes or their flowering pots should have attention right away and be placed outside in the full sun to finish their growth. A convenient method of culture is to put about 10 plants in a deep flat about the same length as the width of a bench and about 15 inches wide. They are not too heavy to handle easily and no room is wasted on the benches. Just now the principal cultural details needing attention are stopping the shoots to induce a good bushy habit and keeping the roots well supplied with water. The newly flatted or potted plants may be lightly shaded, but for a few days only until they become re-established. A little later, when all are well rooted and the roots are hugging the sides of the flats a little rough littery manure or straw placed between the boxes will be an advantage in keeping the sun from drying them out too rapidly. Early in the fall, before there is any danger of frost, the plants should be placed in quite a cool house or shed as the stevia is more easily injured by frost than most plants. If this is not convenient something must be rigged up to protect them in the open from the light frosts that frequently occur in early fall.

### Lily of the Valley.

Although with the end of June the principal demand for lily of the valley drops off for a time there is always some call and those who grow for their own retail trade will know pretty nearly how much to plant in order to keep their customers going. From this time on no bottom heat is required and the "valley" will be ready to cut in about 20 days from time of planting. As less room is needed the present is a good time to carry out any repairs that may be necessary to the frames and covers, renew the sand or make any alterations that may be necessary to the heating arrangements. In place of the large, heavy shutters that were formerly used to keep out the light from the frames for this plant we have of late used plain cypress boards

cut just long enough to take the width of the frames and about six inches wide by one thick, the same lumber in fact that is used for benches. Not only is it lighter and more convenient to handle but by its use we can cover or uncover just so much of a frame as we need and this in itself is a great convenience. The watering has to be carried out with considerable care now there is no heat below as should a very heavy watering be given to stock nearly ready to cut and a few dull days occur there is some danger of damping.

### Asters.

Where there are no means of irrigation the asters are cutting rather a poor figure in the middle west owing to the extreme heat and drought. Careful growers are keeping the cultivation well in hand and this leaves an inch or so of dry dusty soil on the surface thus preventing the escape of what little moisture there is in the subsoil. But even with the best care the plants are suffering while those growers who leave their soil to crack open, thus allowing the moisture to escape, may as well make up their minds that their plants will be practically useless. Where there are means of irrigating a thorough soaking should be given at night after the sun goes down, this replenishing the wasted energies of the plants and refreshing them greatly. Disbudding must be kept going regularly to prevent any waste of the energies of the plants in producing useless shoots and flowers.

### Carnations.

This is a busy time for the carnation grower who has a lot of stock to handle and he has to bend all his energies to the work. The heat under glass is trying to the help and it needs the watchful eye of the chief everywhere. The old plants have practically finished their work and, with the arrival of asters and early chrysanthemums on the markets, the price that poor carnations bring at this time is hardly worth considering and it is best to cut them out and get the benches repaired and filled with new soil. If

there are still some plants in pots they should be planted out without delay and any soil chopping and mixing not yet finished must be brought up to date without delay. As to the effect of lifting plants from the field in dry weather this depends greatly upon the condition and the nature of the soil. On fine, dusty soils that do not hang together the lifting can be done at any time, the only care needed being to water thoroughly immediately the stock is planted. But in soils that bake up into lumps it will be necessary to wait for rain for it is often impossible to get a reasonably good clump of soil without some large chunks falling off and breaking the roots. A light shade, caused by spraying lime wash over the glass, is necessary in all houses where stock is newly planted and it is just as well to put it on at once as it makes the houses a little cooler to work in during the operations of removing the old soil and plants and refilling the benches.

#### American Beauty Roses.

It is pretty well agreed now among the best growers that the constant heavy spraying that was formerly thought necessary for American Beauty roses in summer is not only unnecessary but harmful. It softens the growth, rendering it more liable to be attacked by black spot in the fall; nor does it hold its foliage so well in winter. When stock is newly planted and the weather is hot the plants need the little assistance that spraying affords until they get established, but stock planted in May and now growing freely will get along quite well with one good spraying in the morning. Plants that are flowering will be benefited now by a good layer of rich manure to keep them going and it is hardly possible to over-water this stock at the root. Other plants, cut back and replanted, should have a good soaking occasionally and have the heads sprayed regularly to induce a good break of the young shoots, this being followed with heavier waterings as the roots obtain a hold of the new soil. Benches that were planted last year and have now about finished flowering should be dried off for a couple of weeks preparatory to being cut hard back and started up again. The loose surface soil should be removed after pruning and replaced with a topdressing of good rich soil, first watering the old soil thoroughly as it is sometimes difficult to get the moisture down to the roots without at the same time rendering the top soil too moist.

#### Pyrethrums.

Where the first flowers of *Pyrethrum roseum* and its varieties were not all cut do not let them go to seed but cut the stems and allow the plants to grow freely. A good mulch of semi-decayed manure or waterings with liquid manure will be helpful and probably another crop of flowers will be produced in late summer. The young stock raised from seed this spring should now be good plants fit to go into their permanent places in the beds or borders where they will probably flower a little this fall and make elegant stock for flowering next year.

## THE RETAIL TRADE

THE retail store must not be allowed to degenerate into a lounging place but should be kept cool and the comfort of customers must be considered.

SWEET PEAS and *Gypsophila paniculata* form an elegant combination either in table decorations, wreaths or any other work where lightness is required.

CORNFLOWERS and yellow California poppies or the pretty *Dimorphotheca aurantiaca* which is now grown considerably for cutting go well together and are charming if associated with water lilies.

#### Basket of Gladioli and Roses.

SEE SUPPLEMENT WITH THIS ISSUE.

Gladioli and pink roses form a delightful combination for baskets at this time of year when both can be had in plenty. The somewhat stiff stems of the gladioli are relieved by the grace of the roses and if the color of the gladioli is well chosen there is nothing to clash. Baskets of flowers are becoming increasingly popular for presents for birthday and other occasions and retailers will do well to have one or two made up for display in their windows. They cost little to

produce and sell at a price that shows good profit, provided they are gracefully and prettily arranged. There is such a variety of stock from outdoors at this season that the flowers in the baskets can be changed from day to day, using say Japanese irises as the principal flower one day, American Beauty roses the next, delphiniums another, lilies, water lilies or some other stock on other days and such displays, if they do nothing else, are bound to attract attention to the store and in this way prove an excellent advertisement.

#### With the Chicago Retailers.

After the glorious Fourth everyone expects a quiet time and this year is no exception to the rule for things are certainly dull just now with the Chicago retailers. But it may be safely said that trade has kept up better and retailers have been enabled to make better profits on their work this season than for many years past and we hear very few complaints. Of course there is the retailer who directly the hot weather starts in leaves his windows untidy and short of stock fearful of losing a few flowers and driving away what little trade of a transient character could be interested. Others, on the other hand, when stock is cheap, buy liberally and make a show in

VASE OF CHOICE WATER LILIES.

Arranged By John Mangel, Chicago.

BASKET OF GLADIOLI AND KILLARNEY ROSES.

their windows that at least lets people know they are doing business and these reap the benefit every time.

August Lange always makes a good show with moderate priced stock and gives his customers the benefit of it, consequently, go into his store when you will, the help is always busy. He may not get very big prices for all the stock sold but he gets a big turn-over, and when the good work comes along he is just as well able to take care of it as anyone. A look over his stock during the end of the week disclosed fine showings of sweet peas—the whites especially good—Japanese irises in all colors and whites, fine bunches of *Achillea ptarmica*, The Pearl, corn-flowers, orchids and many other sundries besides good stock of the usual varieties of roses, carnations and other standard kinds. Vacations are in order at the store among the help, six being away now and others to go. Mr. Lange leaves himself July 18 for Mt. Clemens, Mich., where he intends to rest up for about three weeks.

John Mangel is another spirited buyer and his store windows and ice boxes are always replete with good stock in plenty. At the end of the week the Wabash avenue windows were finely arranged with fancy leaved caladiums and cut flowers in great variety, including Japanese irises, Easter lilies; gaillardias and sweet peas. The Monroe street window has for the last three or four weeks been a great attraction to the public, people thronging the sidewalk at all times to view the delightfully cool looking arrangements of water lilies and ferns, constantly varied, yet always attractive. Mr. Mangel is certainly deserving of all the trade that comes his way for he lays himself out to catch the public and works hard at it at all times.

Canger & Gormley have had a most attractive window of late, white water lilies in a small pond surrounded with ferns and bunches of cornflowers and coreopsis, the yellow, blue and white making a beautiful combination. Good gladioli, Shasta daisies and other choice flowers are also shown. They have been extremely busy during June with weddings and have several others ordered for the near future. J. J. Gormley is taking a two weeks' vacation, spending his time principally in short trips out of the city. Lubliner & Trinz say that trade has kept up well right along. Last season they rented one of their windows for the summer months but this year they intend keeping both for flowers as the trade is keeping up so well for the season. Elegant sweet peas, Shasta daisies and carnations are among the principal offerings. The Fleischman Floral Co. reports an elegant season's business, the run in wedding and funeral work being remarkable. It has slowed down considerably now, of course, but there are still good orders coming and a lot of stock being handled. Good cattleyas, water lilies, marigolds, sweet sultan and sweet peas are among the offerings in small flowers here with always a good demand for Beauties and other choice rose stock.

On the south side C. A. Samuelson at Twenty-second and Michigan avenue has a remarkably fine window. It is so simple that a description of it does not amount to much or give a

good idea of how successful it is but it is in the pretty blending of the plants and their tasteful arrangement that the chief charm lies. Fancy leaved caladiums and various ferns and other foliage plants in baskets with spikes of gladioli here and there is a bald description of it only, but it would be difficult to say what a delightfully cool and charming effect the decorator has got out of this simple material. It is exceptionally good as is the cut flower stock handled and Mr. Samuelson reports a fine season's business. W. J. Smyth at Thirty-first street and Michigan avenue has been very busy of late with wedding and funeral work and has several good wedding orders in hand for the near future. The stock shown comprises elegant gladioli, peonies and other seasonable flowers besides a number of the pretty baskets for which Mr. Smyth is justly noted. He is staying at Antioch, Ill., at his summer home, but comes to the city on Saturdays. Altogether the trade shows a healthy tone for the season and our only reason for not mentioning several other prominent firms is lack of space and time to call. The above gives a very good general idea as to how things are going.

#### An Excellent Bowl Arrangement.

Take a good-sized bowl, place a smaller one inside of this and in this place a finger bowl, and in this a glass filled with water and arrange into them daisies of different lengths. The showy *Phlox Drummondii* is good with these, and with this can be combined gaillardia, coreopsis and calendula, which combine effectively where yellow is desired. Gaillardias with their deep red centers show to good advantage combined with deep red flowers. Red and yellow well combined make a beautiful effect. Flowers should always be arranged as much as possible as they are in nature, dainty flowers in a delicate way and the more solid ones in masses. Where a very fancy dish is to be utilized orchids look best and are the most appropriate.

A. E. KLUNDER.

#### Suggestions for Long Stemmed Flowers.

Bohemian cut glass makes the best receptacle where quality is to be taken into consideration. The tall slender green or white vases which look like huge morning glory blossoms are beautiful as well as most appropriate. These filled with poppies and fancy grass for a centerpiece for the dinner table with a mat underneath made of scarlet geraniums and edged with the grass make a striking setting. Only a few large poppies should be used in the tall vase so that the effect may be light and delicate; as the poppy is a fairy-like flower the spirit of the flower should be carried in the arrangement. Then at intervals of six—take this number of glasses, the slender lemonade glass would do—fill with poppies and enough geraniums at the base to cover the glass. The darkest and highest poppies should be in the center. The above could be used to good advantage for a window setting of much attraction using a small dining table and making the table cover of galax leaves sewed on green bunting.

A. E. KLUNDER.

## WITH THE GROWERS

Poehlmann Bros. Co., Morton Grove, Ill.

July 8, and the hottest day of the year so far at that, was not perhaps the best time to visit the Poehlmann Bros. Co.'s great ranges at Morton Grove, Ill., but there are always plenty of interesting things to see at this immense place and the present time is no exception. To say it was hot under the glass on that day hardly meets the case though there is no denying the fact that the outside air of Morton Grove seemed mighty good after a two-hours' promenade through, partly under the guidance of the genial August. The carnation range being nearest we went there first and it is surprising how well the flowers are keeping up. White Perfection is certainly the star performer. The glass in the carnation range is slightly shaded and consequently the houses were not quite as hot as some others we visited. The Perfections are there in thousands, elegant flowers, for the time of year while Winsor and other pinks, though not standing the heat quite so well, were still fair bloomers. Beacon showed up fairly well but, of course, the carnations are practically over for this season and the principal interest now centers in the young stock. Quite a lot of this has already been planted and is looking well, the plants sturdy and clean with no sign of disease or any other trouble.

Chrysanthemum planting is going on rapidly still, though there are many benches of early varieties that will soon be ready, Golden Glow was showing color and the flowers looked as though about another 10 days would bring them ready for market. Timothy Eaton, Yellow Eaton, Bonaffon and other mid-season kinds are in elegant shape, the growth being clean and strong and it looks as though the Poehlmann reputation was in a fair way of being kept up this season. The later varieties are practically all planted up and all look well.

The houses of American Beauty roses in Plant A are full of interest to the growers. There are benches in quantity that have been flowering all winter and yet producing fine flowers. These had a short rest early in the season and were cut back, starting up again directly. They are now being fed with a liberal mulch of well prepared cow manure which will keep them moving for some time to come. Other plants set out early this year are flowering well, fine buds on stiff stems with elegant foliage being taken. Stock planted in May has made an excellent start and has fine strong foliage and long canes already. This stock is now well established and is taking lots of water at the root, but little spraying is done. The plants are exposed to the full sun and so get well hardened and ripened, producing fine flowers of great substance later. Then some other houses are planted to stock that has been lifted and cut back. There is no foliage to speak of on this as yet but the plants are breaking finely and will doubtless give a good account of themselves later.

The orchid houses are beginning to be very interesting, the earlier purchased plants having become well established. About 14,000 cattleyas are

now in the collection and Messrs. Poehlmann have a collector working in Venezuela looking up good commercial varieties. Besides this 65 new cases are due to arrive any time. There are thousands of newly imported plants ready to pot and the houses are being made ready to receive them. Eventually a large section will be devoted entirely to cattleyas. Just now there is not much in flower, *C. gigas* being the principal with a few *C. Trianae* and *C. Percivaliana* flowering out of season as newly imported plants frequently do. It is a pleasure to an orchid grower to see these plants and note how well they are taking hold, the fine new roots and young growths being just of the kind that promise plenty of flowers in due season. Like everything else taken up at this place, the orchid end is being handled with spirit and an experienced grower has been employed to look after them.

In Plant B tea roses are grown exclusively and to see the wonderful new growths and fine flowers from young stock planted this season is a revelation. Bench after bench and house after house of Killarney, White Killarney, Richmond, My Maryland and Perle are there, also a good number of Cardinal which has been found even more useful than Richmond. An interesting sight just now is the original plantings of My Maryland. These are now in their third year but are in splendid condition, throwing up great canes with healthy foliage and flowers that would do credit to a grower in March or April. Bride and Bridesmaid have been cut out altogether, White Killarney and Killarney being planted in their stead. Adolph Poehlmann, who manages this great range, is to be congratulated warmly on the excellent condition of the whole of his great charge.

The recent additions to Plant B consist of eight roofed houses, each 175x27 feet and thirteen 350x27, the last four of which are now nearing completion. The young stock in the earlier finished houses is fine in every way. At Plant A 13 new houses 27x250 feet have been built, nine of them last year, the remaining four this season, making a large and compact range of glass at the far end of the plant. A new truss arrangement, the invention of the firm's engineer, is being tried out on several of the new houses and looks promising. This great increase in the range of the plant has led, of course, to a bigger output and the year ending with June has shown an increase of 42 per cent in sales over that of last year. This seems almost incredible but is very readily understood when the fact is taken into consideration that the greenhouses have been increased nearly one-third. A new well has been bored which is giving 1,500,000 gallons of water per day. August Poehlmann thinks very highly of the Wittbold cement bench. In fact he thinks it is the only one to use and is loud in its praises. It is only a question of time before all the houses here will be equipped with benches made from the Wittbold patterns.

A word is in order here as to the way the cut flowers are handled which probably accounts for the excellent manner in which the stock arrives at

the store. The flowers are cut twice daily and are placed in the cooling rooms for about four hours, just long enough for them to lose the greenhouse heat. They are then packed expeditiously and shipped by express to the store where they arrive in the very best possible condition. Here John Poehlmann takes hold, and any long distance shipments that have to be made are packed at once and leave by the quickest route, insuring their arrival in good shape even in the hottest weather. The wonderful growth of this business is a great tribute to the skill and energy of the Poehlmann brothers, one and all, and shows what great things can be done when the facilities for doing business are there and plenty of the right kind of help to keep things moving.

W. Atlee Burpee.

President National Sweet Pea Society.

#### Disbudding Asters.

ED. AMERICAN FLORIST:

Please give me a few pointers on disbudding early and late varieties of asters.

SUBSCRIBER.

When the plants are 8 to 12 inches high they will show signs of making side shoots or lateral growths as they are usually termed. At this stage of growth the top of the main stem is surmounted with a bud, which should be pinched out and thus hasten the lateral growths. When these laterals are 10 to 12 inches long and the buds begin to form, remove all except five to eight of the strongest, considering the vigor of the plant and the variety being treated in deciding how many to retain. The quality of the flowers will be greatly improved by this course; not only will they be more double but will be longer and stronger stemmed.

ELMER D. SMITH.

MARBLEHEAD, MASS.—The business in Atlantic avenue which has been conducted by L. H. Hayden is now incorporated under the name of the Devreux Incorporated Greenhouses. Mr. Hayden is president of the concern and Roger Upton is treasurer.

#### National Sweet Pea Society.

SECOND ANNUAL EXHIBITION

The second annual exhibition of the National Sweet Pea Society of America opened June 12 at the St. Nicholas rink, Sixty-ninth street and Columbus avenue, New York, and was continued the following day. The extremely hot weather and drought it was feared would prevent anything like a satisfactory show but, although the stocks were injured to some extent, it was far better than could have been anticipated and the show opened with a large number of excellent exhibits tastefully arranged. Some of the exhibits were really first class and all were very creditable. Great interest has been shown and continues to be shown in the society and its exhibition.

#### BUSINESS MEETING.

President Turner called the business meeting to order at 8 p. m. and delivered the opening address, which was well received by the small number of enthusiasts in attendance. Rev. W. T. Hutchins then read a very instructive paper and, in the absence of Prof. John Craig, President Turner read his paper on "Sweet Pea Experiments at Cornell." Another paper on the "Results of the Sweet Pea Trials at Cornell" was presented by Prof. Beal. A. T. Boddington spoke of the need of increased membership and funds. The Doubleday, Page Co. offered the use of auxiliary trial grounds at Hempstead, Long Island. Votes of thanks were tendered the essayists. In the election of officers W. Atlee Burpee was chosen president, Wm. Sim, vice-president; A. T. Boddington, treasurer, and H. A. Bunyard, secretary. John Farquhar and Harry Turner were elected members of the executive board. It was resolved that the next exhibition of the society be held at Boston March, 1911, in connection with the National Flower Show, when the time and place of the summer show will be decided upon.

The visitors included G. W. Kerr, Philadelphia, Pa.; Wm. Sim, Cliftondale, Mass.; Prof. John Craig, Ithaca, N. Y.; Prof. A. C. Beal, Ithaca, N. Y.; Edwin Lewis, Taunton, Mass.; Victor May, Groton, Conn.; George Clark, Philadelphia, Pa.; John Hay, Philadelphia, Pa.; Geo. Watson, Philadelphia, Pa.; Rev. W. T. Hutchins, B. H. Tracy, Wenham, Mass.

#### AWARDS.

President Harry Turner's cup, value \$25, for the best 25 vases of sweet peas in 25 varieties—Mrs. G. D. Layng, Mt. Kisco, N. Y., first.

The W. Atlee Burpee cup, for the finest and largest collection of sweet peas—Howard Gould, Castle Howard, Harry Turner, gardener, first.

The W. Atlee Burpee prize, for the best vase of waved or Spencer type sweet peas introduced 1910—Morton F. Plant, first; Seth Low, Bedford, N. Y., second.

Arthur T. Boddington prize, a silver challenge cup, value \$50, for a collection of sweet peas, 25 varieties, not less than 25 stems to a vase, to be shown with sweet pea foliage only. To be won twice by the same exhibitor. (Arthur T. Boddington also awards to the winner of this cup, each time won, a cash prize of \$25, also \$15 second prize and \$10 third prize.)—Seth Low, first; Howard Gould, second; S. Untermyer, Yonkers, N. Y., Alex. McKenzie, gardener, third.

Countess Spencer.  
Pale Pink With Deeper Edges.

Dainty.  
White, Pink Picotee Edge.

Florence Morse Spencer.  
Delicate Blush, Pink Margin.

Romolo Piazzani.  
Violet Blue Self.

Agnes Johnston.  
Rose Pink, Shaded Cream.

Midnight.  
Deep Purple Maroon, Almost Black.

Prince Olaf.  
White Marbled Pure Blue.

White Spencer.  
White.

Marquis Spencer.  
Rosy Heliotrope.

MODERN SWEET PEAS ABOUT ONE-HALF NATURAL SIZE.

Rawson's silver medal, for the best 20 spikes of sweet peas, Rawson's Snowflake—Morton F. Plant, first.

Rawson's bronze medal, for the best three vases comprising white, lavender and pink; open to amateurs only—Mrs. John D. Wing, Millbrook, N. Y., first.

Henry A. Dreer prize, for the best 21 vases of sweet peas, the 21 incomparable standard varieties as enumerated in Dreer's Garden Book for 1910—

F. R. Pierson Co.'s prize, for the best 12 vases of sweet peas, in 12 varieties—Morton F. Plant, first; Mrs. John Magee, Mt. Kisco, N. Y., second.

The Aphine Manufacturing Co.'s prize, for the best collection of sweet peas, open to florists only—Winkles Bros., Hackensack, N. J., first.

The Anton Zvolanek prize, for the best 10 vases of Spencer and Unwin types, in 10 varieties—Seth Low, first.

The Mrs. Lea McIlvaine Luquer prize, for the best vase of crimson or scarlet sweet peas, one variety only—Morton F. Plant, first; Rand H. Scoville, second; Seth Low, third.

The Frank H. Traendly prize, for the best vase of lavender sweet peas, one variety only—Morton F. Plant, first; Seth Low, second; Mrs. C. D. McDougall, third.

The Burnett Bros. prize, for the best vase of blue sweet peas, one variety only—Rand H. Scoville, first; S. M. Goldsmith, second; Morton F. Plant, third.

The Harry A. Bunyard prize, for the best vase of vari-colored sweet peas—Seth Low, first; Morton F. Plant, second; Rand H. Scoville, third.

Henry A. Dreer, Inc., Philadelphia, arranged a fine exhibit of water lilies and lotus. Julius Roehrs Co., Rutherford, N. J., and Joseph A. Manda, Orange, N. J., had fine exhibits of orchids and John Lewis Childs, Floral Park, N. Y., showed dandelions.

The Palisades Nurseries, Sparkhill, N. Y., contributed a fine collection of herbaceous perennials. Cornell University Experiment Station exhibited an extensive collection of sweet peas.

The judges were: G. W. Kerr, Philadelphia, Pa.; Wm. Sim, Cliftondale, Mass.; Prof. A. C. Beal, Ithaca, N. Y., and Rev. W. T. Hutchins.

WATERTOWN, MASS.—The horse and wagon of Mansfield, the florist, driven by a young woman, was run into by an electric car on Washington street, July 8. The wagon was badly damaged, but the driver, who was thrown to the ground, escaped uninjured.

WASHINGTON, D. C.—Plans were discussed for the annual flower show to be held early in November by the Florists' Club at a meeting, July 5, at W. F. Gude's, 1214 F Street, northwest. A committee was appointed to make arrangements for the trip to Rochester, N. Y., in August. A committee was also appointed to make the necessary arrangements for the annual outing, which will be held in the near future. Following the business meeting the members adjourned to the basement of the building, which had been arranged as a grotto for the occasion. Refreshments were served and the members enjoyed themselves until a late hour.

THE MODERN SWEET PEA.—(About Half Natural Size).

Countess Cadogan.  
Clear Violet, Wings Light Blue.

Mrs. Dugdale.  
Rose, Shaded Primrose.

Mrs. G. D. Layng, first; Seth Low, second.

Jerome B. Rice Seed Co.'s prize, for the best vase of white sweet peas.—Rand H. Scoville, Chapinville, Conn., first; S. Untermeyer, second; Mrs. C. D. McDougall, Auburn, N. Y., third.

The Peter Henderson & Co.'s prize of \$10 in gold, to be awarded the amateur exhibitor of the best and most distinct collection of 25 varieties of sweet peas, including not less than six of the Spencer type. The number of sprays to each variety to accord with the society's rules—Mrs. J. D. Wing, first.

The Henry F. Michell Co.'s prize, for the best three vases of sweet peas (one vase of each variety), Frank Dolby, White Spencer, Mrs. Alfred Watkins—Seth Low, first.

The C. C. Morse & Co.'s prize, a silver cup, value \$25, for the finest collection of sweet peas (open to the trade only)—A. T. Boddington, New York, first.

Watkins & Simpson's prize, for the best vase of Nora Unwin, Frank Dolby, Mrs. A. Watkins, A. J. Cook, E. J. Castle—Morton F. Plant, first.

Stumpp & Walter prize, for the best three vases of sweet peas, Spencer type—Rand H. Scoville, first; Morton F. Plant, second; Seth Low, third.

The J. M. Thorburn Co.'s prize, for the best vase of pink sweet peas, one variety only—Morton F. Plant, first; Mrs. G. D. Layng, second; S. M. Goldsmith, third.

The John Lewis Childs prize, for the best vase of white sweet peas, one variety only—Rand H. Scoville, first; Morton F. Plant, second; Mrs. C. D. McDougall, third.

The Sutton & Sons prize (Reading, Eng.), cup value \$25, for the best table of sweet peas to be arranged on a space four by three feet and not to exceed three feet in height—Col. F. Mason, first.

The John Young prize, for the best vase of sweet peas never before exhibited, one variety only—Rand H. Scoville, second.

The Florists' Exchange prize, for best vase Countess Spencer—Morton F. Plant, first; Rand H. Scoville, second.

The A. L. Miller prize, for the finest bunch of mixed sweet peas. This vase may contain as many sprays as the exhibitor desires, and sweet pea or other foliage may be used—Rand H. Scoville, first.

## WATER GARDENS.

### A Quarter Century of Aquatics.

BY WILLIAM TRICKER.

What have we gained — what advancement have we made in aquaculture during the past 25 years? In the daily rush and anticipation of each recurring season our minds are set

on the prospective and no sooner one arrives than we anticipate the next, ever onward, ever forward, and a retrospect or a review of only a season or two is the most we can afford. But here is a land-mark, another mile stone, and we must stop and take notice.

As we review the past 25 years in horticulture we find advancement in all lines, in some probably more than in others; some particular branches have been benefited by special societies, notably the carnation, chrysanthemum, rose, dahlia, etc., but these specialties have been supported and advanced by commercial men with a commercial end in view. They are florists' flowers and do not appeal to the amateur or general grower as a garden flower or decorative plant. Aquaculture has had no such stimulus; although receiving the support of horticultural societies, etc., its ad-

vancement has been solely on its own merits and private enterprise. About 30 years ago, efforts were made to grow *Nelumbium speciosum*, (roots were received by Isaac Buchanan from Japan prior to this but were lost) and Samuel Henshaw of west New Brighton, Staten Island, raised some plants from seed received from Japan, which, at a recent date, were still flourishing. About the same time E. D. Sturtevant of Bordentown, N. J., reintroduced the same plant, this time from Paris, where it was established in the Jardin des Plantes. It proved hardy in New Jersey and grew as vigorous as *N. luteum*. This, with the introduction of a few tender nymphæas, brought aquatics to the front.

#### AMATEUR CULTIVATORS.

A few amateurs launched into water gardening and 25 years ago N. T. Simpkins of Yarmouthport, Mass., entered the field, followed by Dr. Henry Faunce and others. W. H. Chadwick of Chicago grew aquatics which undoubtedly led to the introduction of these plants into Lincoln park, Chicago, in 1888 under the able management of Superintendent J. A. Pettigrew. John N. Gerard of Elizabeth, N. J., did much to push the new venture by growing some plants and rendering valuable information through the columns of the Garden and Forest. S. C. Nash of Clifton, N. J., established the largest and best water-garden in the eastern states. In 1886 aquatics

were established in Central park, New York, and became famous for its grand massing of *Nelumbium speciosum* but its glory has departed. No nelumbiums are now to be found in any of the smaller parks and only second-rate ones in Prospect park and two or three fountain basins. Other noted parks in different sections of the country took up aquaculture and James Gurney of St. Louis, Wm. Dogue of Boston, Wm. Hamilton of Allegheny, Pa., Wm. R. Smith of Washington, D. C., and others are in the front rank of veteran growers.

Twenty-five years ago Henry A. Dreer of Philadelphia listed a few aquatics—about half a dozen varieties—but little or no change or addition to the list was made for about 10 years.

#### VICTORIAS.

Hovey & Co. of Boston and Benj. Grey of Malden, Mass., also listed and offered water lilies for sale about this date. In 1886 E. D. Sturtevant introduced a variety of victoria under the name of *V. Randii* but after a few seasons it disappeared as did other forms of *V. Regia*, but it had added its stimulus to the culture of the victoria and, not only at Lincoln park, Chicago, but in other public gardens were attempts made to grow the victoria with or without artificial heat. It was grown by Wm. R. Smith in the Batholdi fountain, Botanic Garden, Washington, D. C., and Dr. Henry Bahnson of Salem, N. C. After several attempts the latter succeeded

in growing and flowering the same without artificial heat.

Very gratifying results have been obtained by growing it under glass, notably at Allegheny and Schenley parks, Pittsburg, Pa., and a few private estates, but preference is now given to outdoor cultivation with artificial heat at the early stages of growth which is the recognized system for this species. In 1894 another species was introduced as *V. Trickeri*;

*N. chromatella*). These, with other famous crosses of hardy nymphæas, gave many new and varied forms and colors that stimulated aquaculture and added new features to landscape art and gardening.

At the Paris exhibition in 1889 M. Marliac surprised the horticultural world with his exhibit of hybrid hardy nymphæas and as soon as the plants were offered for sale they became popular in both hemispheres. Marliac

ter lilies were exhibited at the world's fair, Chicago, by E. D. Sturtevant and Wm. Tricker and new hybrids of the night-blooming varieties were exhibited then, and afterwards disseminated by Wm. Tricker & Co. In 1896 Henry A. Dreer commenced aquaculture on a large scale under the management of Wm. Tricker as specialist. Here water gardening has developed to its present high standard, aquatics of all varieties have been tested, collected, hybrids raised and distributed to all parts of the horticultural world. Some valuable natural crosses have occurred with W. B. Shaw at Benning, D. C., and Geo. Richardson, Warren, O. Some of the choicest hardy hybrids were raised by the late James Brydon, notably the one bearing his name. There are still others who have taken a lively interest in hybridization. Oakes Ames, North Easton, Mass., Peter Bissett of Washington and Dr. Henry S. Conard, University of Pennsylvania.

#### CATALOGUES AND BOOKS.

Twenty-five years ago few catalogues listed aquatics and some only the native varieties; fewer still listed tender nymphæas and the prices then were almost prohibitive—*Nymphæa Zanzibarensis* was priced at \$10 each; today it can be bought for \$1.50. It was not until 1894, after the Chicago exposition, that growers, dealers and others became enthusiastic in water lilies and with an increasing demand leading houses in New York, Boston, Philadelphia and Chicago gave an up-to-date list. The number of nymphæas nelumbiums, etc., have steadily increased until in 1909 catalogue lists comprise as many as 68 species and varieties of nymphæas alone and a long list of nelumbiums and other aquatic plants. Marliac lists 62 species and varieties of hardy nymphæas alone and the end is not yet. In the treatise "Water Lilies" Dr. Henry S. Conard enumerates seven species and 93 varieties. The leading florists,

VICTORIA TRICKERI.

seeds were sent to Kew for identification and the specimens grown there were regarded simply as a form of *V. Regia* but investigation made by the writer and others prove conclusively that it is *V. Cruziana* d'Orbiguy. This species has received a well deserved popularity in Europe and the United States, being more amenable to outdoor cultivation and as easily grown as the tender nymphæas, not requiring the high temperature necessary for *V. Regia*.

#### HYBRID NYMPHÆAS.

Few species of nymphæa have been introduced during the past 25 years. As in other branches of horticulture new varieties have been the product of the hybridist and many of them have been exceedingly beautiful and have surprised the horticultural world. Mr. Sturtevant had the honor of raising and introducing the first hybrid of American origin. *Nymphæa Sturtevantii*, a night-blooming variety, introduced in 1884, is worthy of immortalizing the raiser's name. Other varieties, both hardy and tender, have been sent out since then by the same man, but *N. Sturtevantii* is par excellence. Nymphæas at this early date, especially the tender varieties, were costly, their method of culture not so well understood and their winter care so problematic that, while they had a host of admirers, few ventured to grow them. It was not until that worthy French hybridist B. Latour Marliac conceived the idea of crossing the American species, *N. tuberosa* and *N. flava* that he produced the famous canary lily, *N. tuberosa flavescens* (afterwards known as

by his persistent efforts still maintains his unique position and year by year new varieties are added to the list. In the United States, horticultural societies, expositions, public parks and gardens were means of publicity and sources of education and many individuals became interested in the culture of water lilies. In 1893 wa-

AQUATICS AT HENRY A. DREER'S NURSERY, RIVERTON, N. J.

NYPHÆA DENTATA MAGNIFICA AT TWIN OAKS, WASHINGTON, D. C.

seedsmen and others offer water lilies and aquatics for sale and give cultural notes which have been of great benefit to amateurs and others. Then we have had essays, papers, magazine articles, etc., which have contributed much useful information, as well as the weekly horticultural press.

Volumes have been written by experts, including "The Water Garden" by Wm. Tricker, "Water Lilies" by Conard and Hus, and "Water Gardening" by Peter Bissett. Bailey's "Encyclopedia of Horticulture" contains much data and information on water lilies and other aquatics that would make a book in itself. But the most complete, comprehensive and exhaustive work ever written is Dr. Conard's "Monograph of the Genus *Nymphaea*," a complete synopsis of the water lilies such as never has been put before the English-speaking world. Its historical account, together with the introduction and comparison of species and varieties, their names and synonyms, hybrid varieties, descriptions, their culture, uses, etc., is elaborate and complete. The improvement and dissemination of new varieties is being prosecuted with vigor both in this country and Europe, notably by Marliac, Temple sur-Lot, Henry Henkle, Darmstadt, and Perry, Veitch and others in England. The species and varieties are numerous and varied; it is a simple matter now to select suitable varieties for all purposes from the

miniature garden where a tub will suffice to the pools and lakes of large dimensions. There is ample room for still further development and during the next decade or quarter century it is reasonable to expect still greater results than have been achieved during the past 25 years.

#### *Nymphaea Lotus.*

Through the kindness of Mr. Holtze, I received, among other *nymphaeas*, seeds of a white variety of *N. Lotus*, collected in the northern territory of Australia, says a German correspondent of the *Gardeners' Chronicle*. It flowered here last season, and shows much resemblance to the forms from India, and especially those from Africa. The flowers are small, but the plant is free flowering. There are four sepals and 14 snow-white petals, 34 white stamens, the anthers being of pale yellow color. There are 13 carpels, and the carpellary style is of sulphur yellow color, and glossy. The leaves are dark green, glossy on the upper surface and hairy underneath. They are irregularly blotched with dark spots, and dentated at the margin. As I have now together true typical forms of *N. Lotus* from nearly all parts of their natural habitat, it will be interesting to compare them whilst under the same cultural conditions. *N. Lotus* has not been noted from Australia previously.

#### The Margin of the Water Garden.

Water in some form adds greatly to the attractions of the garden, for, although perhaps few of us will echo Bernard Pallissy's words, "It is impossible to have a spot proper for a garden unless there be some fountain or stream passing through it," all must recognize the infinite possibilities that the presence of water affords for enhancing the beauty and charm of our gardens. There are certainly many lovely domains where water is absent, but in visiting such there is a feeling that there is something lacking that prevents absolute perfection being attained. It is the absence of water that creates the impression, and one realizes how much the prospect would gain were it possible for the grounds to contain a placid lakelet on whose surface blossoming water lilies floated, or a streamlet, now sonorous as it murmurs over its uneven bed, taking a deeper note when it plunges down a rocky fall, or silent as it glides into a shadowy pool, where the foam-flakes eddy beneath arching fronds of graceful lady fern or royal osmunda.

Water is of inestimable value in the garden, not only on account of the plants which may adorn its surface, such as the *nymphaeas*, the yellow villarsia, and the white Cape pondweed (*Aponogeton distachyon*) for still pools, and the water crowfoot (*Ranunculus aquatilis*) for slowly-flowing streams, but for the many delightful

moisture-loving subjects that may be grouped at its margin.

Much depends on the surroundings of a lake, for it is on these that its effect upon the eye chiefly depends. If they are artistically disposed they heighten the charm of the water and often produce a picture of perfect loveliness, whereas, if the arrangement has not received careful consideration, the probability is that the scene will lack much of its possible beauty. It will be admitted by everyone that planting of some description is absolutely indispensable on the shores of a lake, for a bare sheet of water, with its banks destitute of every description of vegetation, misses one of the chief attractions of still water, that of reflection, since only the passing clouds can be mirrored on its surface. It being conceded that the margins of lakes should be planted, the next question to be considered is the manner of this planting, and the subjects to be employed.

Care should be taken not to overcrowd the margin. Water hemmed in by a barrier of tall and thick-growing subjects is worse than if its circumference were devoid of plants. Things should be naturally grouped, with open spaces here and there, so that the water may be approached from various points, and the effect studied without hindrance from intervening vegetation. A good lesson in grouping may be learned by studying the growth of our wild water plants. In June colonies of wild rhubarb may be seen growing on some half-submerged islet or sandspit, ever swaying with the rapid movement of the water that ridges itself into countless furrows as their strong leaf-stalks break its even flow. In still, shallow backwaters, where the foam-flakes swept by the eddies from the foot of the weir lazily circle, stand sheaves of tall young bullrushes, with yellow, broad-leaved water flags, "Flag leaves" that let green water through," and above them, on the bank, the golden glory of the marsh marigolds, while in a shady reach the river's margin is clothed with the water forget-me-not's blue, a color that seems to pale suddenly as a

glint of more brilliant azure passes, and the kingfisher flashes adown the stream.

For noble beauty nothing is finer for the water's edge than the giant gunneras, *G. manicata* and *G. scabra*, of which the former is to be preferred, as its leaves are larger, often measuring as much as 10 feet across. *Polygonum cuspidatum* and *P. Sachalinense*, with arching, knotted stems, and heart-shaped leaves, make handsome isolated specimens, their land-grabbing nature, which renders them unfitted for the border, being here innocuous. The monkshoods are good waterside plants, the lately-introduced *Aconitum Wilsoni*, a beautiful plant with lavender-blue flowers, rejoicing in moist soil, and often attaining a height of seven feet or more. Some of the senecios are excellent for the neighborhood of water, as they appreciate moisture at the root. Two of the best are of recent introduction. *S. tanguticus* has palmately-lobed leaves and large flower heads composed of innumerable small yellow blossoms. In rich, damp soil it will reach a height of six feet, and is a very handsome object by the waterside. The other is *S. clivorum*, with large yellow flowers. The spiraea family, both shrubby and herbaceous varieties, delight in moisture, and are very pretty when in bloom. Among the best of the herbaceous section are the tall-growing *S. gigantea*, or *Camtschatica*, the rose-pink *S. palmata rosea*, the flesh-colored *S. venusta*, and the white *S. Aruncus*, and in the shrubby division *S. Lindleyana*, *S. flagellata*, *S. Japonica* Anthony Waterer, and *S. Thunbergi* are good.

All of the primulas except two species, *P. Palinuri* and *P. Sinensis*, appreciate moisture, and many succeed to perfection at the water's edge. The stately *P. Japonica*, which, under favorable conditions, will attain a height of four feet, is a beautiful sight at Enys, in Cornwall, where it grows for 100 yards along the side of a lake, under lime trees, and when the plants are in full flower the rosy glow reflected from their blossoms into the still lake is very beautiful. Many of

these plants are growing with the water well above their crowns. *P. Sikkimensis* is equally fond of the water, and there is no better position for it than by the side of a lake, as then its roots will be always moist, a condition indispensable to the successful cultivation of this primula. There are few more beautiful sights than a large colony of *Primula Sikkimensis* growing by the waterside, with tall stems, two feet or more in height, set with clusters of as many as 50 pale yellow, drooping, fragrant blossoms in the early summer. *P. rosea*, the gem of the Indian primulas, is one of the most precious of its race. It requires porous soil and abundant moisture, and does best when planted close to the water, so that its roots may be always damp. In a certain garden half a dozen plants were procured some years ago, and these have spread to such an extent that there are now hundreds of self-sown seedlings, most of which are growing among the stones at the side of a stream, and are often overflown.

For the shallow water at the margin of a lake or pond, arum lilies (*Richardia*) form a most exquisite finish, but, although these are sometimes grown in the open as far north as Scotland, it is scarcely wise to recommend them except for the southwest, or Ireland. In a certain lake in Cornwall they grow in their thousands round the shore, and present a delightful picture in the early days of June when in full bloom. *Rodgersia podophylla* is a strikingly handsome foliage plant. Its large leaves, carried on tall stems, are deeply divided, and of a rich bronze-brown color. The white flower spike, borne well above the foliage in June, is pretty, and it does best by the waterside. Two new species are *R. pinnata* and *R. æsculifolia*. The giant saxifrage, *S. peltata*, is a native of California, but, as it dies down in the winter, is rarely injured by frost. In April it throws up a tall flower spike about three feet in height, bearing a large umbel of pale pink blossoms. The lobed leaves appear after the blooms are past, and are a foot in diameter, having a very handsome appearance.

PORTION OF THE WATER LILY POND OF GEO. SCHWING, ROCKWELL AVENUE, CHICAGO.

*Libertia formosa* will do well by the water in the southern counties, and at Abbotsbury Castle is grown most successfully by the waterside. Other good plants for lake margins are globe flowers (*trollius*), the summer snowflake (*Leucojum aestivum*), yellow and purple loosestrife (*lysimachia* and *lythrum*), willow herb (*epilobium*), *Iris Sibirica*, *Iris laevigata* or *Kämpferi*, Solomon's seal, *Arundo Donax*, *mimulus*, and day lilies. Golden and cardinal willows should not be forgotten, as their bright colors are extremely valuable for winter effect, and the royal fern (*Osmunda regalis*) flourishes nowhere so well as by the waterside.—Gardener's Magazine.

#### A Chicago Water Lily Farm.

A pioneer in water lily growing, and, as far as we know, the only grower in or around Chicago, is Geo. Schwing of 5660 Rockwell avenue. Away out among the wilderness of truck growers around Gage park Mr. Schwing has a big market garden, but like an oasis in the desert is his home and fine lawn, containing large flower beds and borders and his lily pond which just now is extremely attractive. Mr. Schwing has been growing water lilies for sale for 14 years and consigns the whole of his cut to that up-to-date retailer, John Mangel, at Monroe and Wabash avenue, who makes those charmingly cool window displays at this time of year and thus draws attention to his store.

Mr. Schwing has a large concrete pound, only a portion of which is shown in the accompanying illustration, and he grows all the best of the hardy water lilies and some of the tender ones. Among the latter is his own hybrid, a beautiful pink, that throws large graceful flowers up nearly two feet out of the water. This he has named *Nymphaea George Schwing* and finds it one of the finest for cutting. About 16 other varieties are grown, including *N. Marliacea rosea*, *N. O'Maraiana*, *N. albida*, *N. gloriosa*, a beautiful red, *N. caerulea* and *N. Capensis*. All appear to be equally free flowering and the display in the bright, telling colors is extremely beautiful. All around them are many fine herbaceous plants, *Iris Kämpferi* and *delphiniums* being in fine shape at the time of our visit. A bed that is not at its best yet but will be very fine later is planted to *Tritoma Pfitzeri* with large plants of *Arundo Donax* in the center. This will be a grand show when at its best while large raised beds of *cannas* and other plants promise well.

WAKEFIELD, R. I.—Byrnes, the florist, has opened a shop in the Hazard block.

KANSAS CITY MO.—After 21 years at 1017 Broadway Samuel Murray is moving to his new store at 913 Grand avenue. The new location is more accessible to the downtown trade and one of the best positions. Mr. Murray will have much greater facilities for business in his new store. Formerly Broadway was one of the fashionable districts of the city but it is now principally devoted to wholesale houses and the like and thus Mr. Murray was compelled to seek new quarters.

## OBITUARY.

### Mrs. J. P. Cartwright.

Mrs. Cartwright, wife of J. P. Cartwright, a well known grower of Needham, Mass., and one of the original promoters of the first flower market in Boston, died at her home in Needham July 6 after a long illness. She was about 50 years old. She is survived by her husband, one son, Walter, who is associated with his father in the business, and one daughter. At the funeral, noteworthy among the floral tributes was a beautiful standing wreath of roses and other flowers from the people of the old Park Street Market, Boston, with which Mr. Cartwright is connected.

### Thomas Clark.

Thomas Clark, for many years a gardener and florist of Boston, Mass., died at his home in that city July 6, aged 71 years. He was born in Ireland, coming to this country when about 16 years old. In later years he was for a time associated with his son, Thomas J., the well known retailer now in business at Boylston and Berkeley streets. He is survived by a widow, one son, Thomas J., and one daughter, Mrs. John F. Fitzgerald. He was a devout member of the Catholic church and a member of various charitable and benevolent societies connected therewith. He was also a member of the Ancient Order of United Workmen. Mr. Clark was a genial and kindly man, beloved by his family and a wide circle of friends.

### Gustav Drobisch.

Gustav Drobisch, owner of the Cottage Rose Garden and the oldest florist in Columbus, O., died at his late residence, 1265 South High street, July 10, from a complication of diseases. He had been ailing for several weeks, but his condition became serious only a week before his death. Mr. Drobisch was born in Dresden, Germany, 69 years ago, and at the age of 14 years came with his parents to this country. With the exception of four years which were spent in Buffalo, he has since lived in Columbus. He was first connected with the Hanford nursery and in 1881 went into the florist business for himself and continued this business up to the time of his death. There survive, besides the widow, Mrs. Margaret Drobisch, five children, all living in Columbus.

### Thomas W. Dee.

Thomas W. Dee, probably the oldest florist in Boston and vicinity, died at his home, 223 Brattle street, Cambridge, Mass., July 2. Mr. Dee was 73 years old. He had been in poor health for more than a year, but was not taken dangerously ill until Memorial day. On that day a number of his comrades in John A. Andrew post 15, G. A. R., who were decorating at Mt. Auburn, called on him. Mr. Dee was born in the Portsmouth navy yard at Portsmouth, N. H. During the civil war he served in the navy as an assistant engineer and fought at Sumter, at Mobile under Farragut, and at New Orleans and on the Mississippi under Porter.

He went into the florist business with John Galvin about 1878 on Tremont street, Boston. Later he started conservatories at Mt. Auburn and joined William Doyle in business at 57 Tremont street under the firm name of Dee & Doyle. Later his brother, John H. Dee, joined him in business, under the firm name of Dee & Dee, at 114 Tremont street. Thomas conducted the conservatories at Mt. Auburn in-

dependently. He retired from active business nearly seven years ago. His brother, John H. Dee, died six years ago on the same day in July. Mr. Dee leaves a daughter, Mrs. J. H. Gearan, with whom he had lived for many years. His wife died 32 years ago.

### Louis A. Smith.

Louis A. Smith died June 27 at his home at 600 South Huron street, Wheeling, W. Va. Mr. Smith, who was 48 years of age, was the son of John Smith and wife, pioneer residents. He was born on May 4, 1863, at the old Smith homestead and resided there all his life. His father was one of the best known gardeners of this section. After completing his early education the deceased continued to reside at home and about 20 years ago established a greenhouse and general floral business. In this he was very successful and the firm rapidly became the largest of its kind in the city. Mr. Smith was married in 1891 to Miss Jennie Cowl, of Wheeling, and to the union was born one son, Robert, aged 16. The sterling worth of Mr. Smith was known throughout the city and vicinity and he numbered his admiring friends by the hundreds. In addition to his sorrowing wife and son he is survived by several brothers and sisters.

### John W. Dudley.

John Willis Dudley, aged 69, one of the most prominent florists of the south and one of the most respected citizens of Parkersburg, W. Va., died at his home in Dudleyville in the evening of July 3. Although Mr. Dudley had been in ill health for three years previous to his death the end came with extreme suddenness as only 10 minutes before he died he ate a hearty supper. Apoplexy and acute indigestion was the cause of death. Mr. Dudley was born in 1841 in Oswego county, New York, and went to Parkersburg with his father in the early fifties. His father was a contractor and built several churches now standing in Parkersburg.

In 1862 Mr. Dudley married Miss Emma G. Leonard of Wood county, 11 children having blessed their union. Mrs. Dudley died in 1904. Shortly after his marriage he engaged in the gardening and dairy business and in 1868 he built the first greenhouses, adding to them from time to time until today the enterprise stands as one of the finest, if not the finest, in the state and, under the firm name of J. W. Dudley & Sons, is known from coast to coast. A specialty of the firm is fine hydrangeas for which it is justly noted. In 1906 Mr. Dudley married Mrs. Sallie Ward who survives him. He is also survived by the following children: William Dudley, Charles P. Dudley, Mrs. Grace Shields, Miss Lou Dudley of Clarksburg, Mrs. Helen O'Neill, Mrs. George D. Heaton, Mrs. Fred Woods, Mrs. Frank C. Coffman of Washington, D. C., Miss Elizabeth Dudley, Brainard and Albert Dudley, Lysander Dudley, a brother, Mrs. Grace Rhodes of Granville, O., and Mrs. Betsy Cole of Wilkinsburg, Pa.; sisters, also survive.

YOUNGSTOWN, O.—The Idora Floral & Landscape Co. has been organized by W. Bakody of this city and F. Ament of Berlin, Germany. Mr. Bakody will look after the business end of the firm and Mr. Ament who is a graduate of the Royal Academy of Landscape Gardening and Horticulture of Berlin, will have charge of all other work. About 159 acres will be under cultivation, 22,000 feet of which will be under glass.

THE Florists' Hail Association now insures 34,500,000 square feet of glass and has paid over \$25,000 for broken glass this year. John G. Esler, Sadle River, N. J., is secretary of the association.

## Florists' Club Outings.

Minneapolis and St. Paul, Minn.—The annual picnic of the Minnesota State Florists' Association will be held July 21. Secretary, Jerry P. Jorgenson, 3501 Portland avenue south, Minneapolis.

Cincinnati, O.—Cincinnati Florists Society, July 21, at Country Club Grounds, Carthage, O.

St. Louis, Mo.—St. Louis Florists' Club, July 21, at Ramona Park.

THE annual convention of the Canadian Horticultural Association will be held at St. Catharines, Ont., August 10-12.

## Personal.

E. H. R. Green, son of Hetty Green, July 7 was elected a director of the Seaboard National Bank, New York, at a meeting of the board. This election to the Seaboard is his first entrance into New York financial circles.

## American Gladiolus Society.

The schedule of prizes and entry blanks for the Rochester exhibition are now ready to mail, and any one interested that does not receive them, may obtain them by applying to me before August 12. George B. Hart, of Rochester, has offered a silver cup for the exhibit containing the largest number of standard varieties. When it is desired that exhibits be staged by the society, notice should be sent as early as possible to the corresponding secretary. Exhibits by express should be addressed to American Gladiolus Society, Convention Hall, Rochester, N. Y.

President Hendrickson has appointed to serve as a committee on awards Prof. L. B. Judson, Ithaca, N. Y.; Michael Keller, Rochester, N. Y.; Al. Salter, Rochester, N. Y.

L. MERTON GAGE, Sec'y.

## Society of American Florists.

Public notice is hereby given that Hoopes Bro. & Thomas Co., of West Chester, Pa., offers for registration the rose described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

## RAISER'S DESCRIPTION.

Purity.—A strong growing climbing rose, making shoots of from 10-12 inches in a season. Foliage bright, glossy green, free from mildew or black spot. Flower 4-5 inches in diameter, pure ivory white. Petals of great substance and beautifully cupped. The plant is very floriferous, literally covering itself with its large flowers. Resembling Clematis Henry they are borne on long stems 12-18 inches long and are very fragrant. The buds are very large and fine for cutting. Can be used either as a pillar or climbing rose.

Public notice is hereby given that A. N. Pierson, Inc., of Cromwell, Conn., offers for registration the roses described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

Lady Cromwell.—A sport of My Maryland, originating with A. N. Pierson, Inc., in 1908. This rose in every way resembles My Maryland except in color. It is a shell pink outside, shading deeper towards the center, which is a creamy yellow, and sometimes quite a deep yellow. During the hot weather, however, the yellow center disappears, and the rose looks very much the color of an Enchantress car-

nation. It is very fragrant. This rose will not be disseminated until the spring of 1912.

Dark Pink Killarney.—A sport of Killarney originating with the Montrose Greenhouses, Montrose, Mass., and acquired by A. N. Pierson, Inc., by purchase. It is a sport of Killarney identical with the parent in habit and size of bloom. The color, however, is much darker than Killarney at all times of the year. This rose will be disseminated in 1911.

H. B. DORNER, Sec'y.

July, 7, 1910.

## Chicago to Rochester.

The Chicago Florists' Club has arranged with the Lake Shore & Michigan Southern railroad for transportation to the Rochester convention as follows:

A special train will be provided, same to be counterpart of the Twentieth Century Limited and to consist of combination baggage and buffet car, one of the famous Lake Shore diners, as many as 12 section and drawing room sleeping cars (compartment cars if desired) as may be required to properly take care of the party and give everyone plenty of room, the train to be finished off with either an open section or compartment observation end sleeping car. The train will leave Chicago at 5:30 p. m. Monday, August 15, arriving in Rochester at 9 a. m. Tuesday, August 16.

The rate authorized for this occasion is one and three-fifths fare on the certificate plan, \$13.38 going (passengers to be sure and ask for certificates in purchasing their tickets, for on same will depend their being able to secure the reduced rate returning) and three-fifths of that or \$8.10 returning, making a total of \$21.48 for the round trip. The Pullman rates are as follows: Double lower berth or upper berth, \$3; section, \$6; compartment, \$8.50; drawing room, \$11.

Delegates from St. Louis, Indianapolis, Louisville, Cincinnati, Columbus, etc., can join together and arrange for special sleepers to be attached to this special train at Cleveland, thus bringing all together at that point for the remainder of the journey, Cleveland to Rochester. As to the Detroit people, it would be a very easy matter for them to join the special train at Toledo. The St. Louis people could come via Chicago and join this special train if they so desired as the same rate would apply through Chicago as via the direct line.

G. K. Thompson, general agent passenger department, will accompany the party for the purpose of seeing that everything goes smoothly. For further information and reservations, address G. K. Thompson, 180 Clark street, corner Madison (Telephone, Harrison 7,600) or E. F. Winterson, 45 Wabash avenue (Telephone, Central 6004).

## Meetings Next Week.

#### TRADE DULL AND STOCK POOR

Although some of the principal wholesalers are managing, by shipping stock directly it arrives and selecting the best grades only, to keep their long distance customers in good temper, the fact remains that the great bulk of the stock now arriving is of the poorest quality and not fit to ship any great distance. Carnations are shipped in regularly each day and just as regularly find their way to the dump. They are not fit to ship nor will they last any time and unless it is for making up into funeral pieces they are very little good. There are some fair flowers, from growers who have shaded their houses and laid themselves out to keep the plants moving, but they are in the minority. The truth about much of the poor stock coming in undoubtedly is that growers are afraid to lift their field plants on account of the drought and so leave the old plants in and take a chance on shipping them in, thinking they will make something at least, out of them. But in many cases they are lucky if they make the express charges. Good white stock has been asked for and not always forthcoming, but that is about the only kind needed.

Roses are little better than carnations. They are small and thin in the majority of instances and very little choice stock can be had. White Killarney is taking on a decided pink tinge and Killarney is very poor, as is Richmond. Beauties are only fair and it is perhaps fortunate that the demand is no better, for it could not be met if it was brisk. Asters are coming in but in the majority of cases they are open in the center, poor in color and substance and generally not worth much. Among orchids there is little change from last week in the supply, but the demand is not so good. Hardy flowers are of good quality considering the drought. Shasta daisies are fine; gypsophila, achillea, coreopsis, gaillardias, pyrethrums, cornflowers, pansies and others can all be had, but there is not much demand for them. In fact, the good old summer time is here all right and the check of the business was just about as sudden as the change in the weather. Vacations are the order of the day and in almost all of the houses some familiar faces are missing temporarily.

### NOTES.

The Lake Shore & Michigan Southern railroad has been selected as the official route to the Rochester convention. Full particulars of the arrangements will be found elsewhere in this issue. E. F. Winterson, chairman of the transportation committee, will be pleased to hear from all those who intend to go on the special train, which will leave this city at 5:30 p. m. Monday, August 15. Fare for the round trip is \$21.48 on the certificate plan, Pullman accommodations extra, according to the needs of the individual. Reserve berths early.

Miss Amy Forst of the Deamud force has gone to Eagle Lake, Mich., for two weeks. She is staying at W. H. Kidwell's hotel. T. C. Yarnall takes week-end trips there to visit Mrs. Yarnall and family, who have been staying some weeks. A considerable party left here Monday by the City of South Haven for the same place and Kidwell's hostelry appears to have a great attraction. Everyone who has been there is loud in praise of the excellent arrangements made for their comfort and of the delightful country around the hotel.

Conrad Frauenfelder, 3343 West Madison street, is having some new benches installed in his houses. Business has been very good the past season. J. Mohrle, who has charge of the store, left last Sunday for New York where he will remain for two weeks on a vacation. Roy Achenbach, Mr. Mohrle's assistant, is also on his vacation. Mr. Frauenfelder has been in business here for 25 years and Carl Werner has been in his employ for the past 13 years. The auto is receiving a general overhauling.

H. N. Bruns is having a cement floor laid in one of his greenhouses. New benches will also be put in and when the work is completed the house will be used for fern growing the coming season. Mr. Bruns is well pleased with business the past year and is now busy with funeral and wedding work. A. Billerbeck assists Mr. Bruns in the store while six men are employed in the greenhouses. The store is closed at 7 o'clock every evening except Saturday.

Peter Weiland has gone to Mt. Clemens, Mich., to take the baths for rheumatism. Mr. Weiland intends building a new greenhouse plant on his 57-acre farm at New Castle, Ind., adjoining the Big Four railroad track

on the west. Building operations will be started in the fall with a range of 10 houses, each 28x300 feet. Most of the product will be marketed in Indianapolis, where a wholesale store will be opened.

Kaiserin roses and American Beauty from young stock continue to arrive at Bassett & Washburn's. The firm fully intends to build a new plant as soon as a suitable location is found, but Mr. Washburn has not yet found it. He has been out several days this week inspecting proposed sites but he says that all he has done so far is to get several good soakings of rain and a fine coat of tan.

Kyle & Foerster report trade as far better than they expected at this season. An extremely fine late pink peony is being shown here, clear in color and a magnificent variety. Achillea, gypsophila and other hardy flowers are found here.

Weiland & Risch are quite open about the condition of business and own up to the depression usual at this season. Mr. Risch says though they have had a magnificent season and the young stock at the greenhouses is in elegant shape. They have a big stock of carnations in the field which look well.

Good orchids are being received daily at Vaughan & Sperry's and clear out well. L. A. Vaughan is still at Minocqua, Wis., fishing and fighting forest fires. His first day's catch was 8 black bass and one muskallonge. Fred Sperry is in charge and intends to take his vacation in August.

Poehlmann Bros. Co.'s stock is certainly as good as any now arriving here, the special care taken in cooling at the greenhouses and in grading and quick handling at the store accounting for the firm's success in long distance shipping.

Elmer E. Boynton, formerly a grower at Sycamore but now president of the First National bank of Butte, Neb., was in town this week, being piloted by J. B. Deamud, to whom he formerly consigned his stock.

Peter Reinberg has gone for a two weeks' trip to Yellowstone Park. The shipping trade keeps up remarkably well for the season here, carnations and roses being of good quality for this time of year.

Shasta daisies and some of the finest Killarney roses seen on the market are shown at Zech & Mann's this week

# Summer Flowers

**New Beauties, Kaiserin, Rhea Reid,  
Pink Killarney, Maryland, White Killarney**

These are the best roses for hot weather. We devote a whole range of glass to their growth and our plants are two to five years old, giving big, strong flowers.

**Buy Direct of the Grower and Get Fresh Stock.**

## Bassett & Washburn

Store and Office: 76 Wabash Ave.,

**CHICAGO**

Greenhouses: HINSDALE, ILL.

are justly celebrated all over the United States for their fine quality. Our unexcelled facilities, both at the greenhouses and our wholesale store, enable us to handle the flowers, even in the **hottest weather** with promptitude and dispatch, insuring their arrival in first-class condition, no matter how far they are shipped. The stock we are now cutting is of exceptionally good quality and substance for the season.

Our **Beauties** of medium and shorter grades from young plants are splendid stock, fine foliage, good stems and flowers of fine color. **White Killarney** is in great shape and we have plenty for everybody. Also **Killarney, My Maryland, and Richmond.**

**Carnations** in all the leading varieties including fine **Enchantress, Winsor and Lawson,** are exceptionally good for this season of the year. **Home Grown Orchids,** fine fully developed flowers a specialty with us.

**Valley and Harrisi Lilies all the Year Round.**

**POELHMANN BROS. CO.** OFFICE AND SALESROOM:  
33-35-37 RANDOLPH STREET. **Chicago,**  
LONG DISTANCE PHONE, RANDOLPH 35.

Good Boston ferns in 5, 6 and 7-inch pots are being shown at Winterson's Seed Store. The seed trade here has slacked up after an exceptionally busy season.

Joe Dunn, formerly grower with J. A. Budlong Co., and later in business at Sturgis, Mich., is now foreman at the Hoerber Bros. plant at Desplaines.

C. W. McKellar and wife started on a six weeks' automobile trip east on Saturday. Fine *Cattleya gigas* are among the orchids shown here.

Kennicott Bros. Co. is showing a great variety of stock, including fine *Lilium auratum*, elegant *gladioli* and Golden Glow chrysanthemums.

Announcements are out for the wedding of Miss Marguerite Paulinsky, daughter of W. L. Paulinsky, and Allen George Mead, July 15.

Quite a number of out-of-town florists have passed through the city this week, enroute to the Elks' convention at Detroit.

F. Longren of E. H. Hunt's left July 9 for a southern trip. Business keeps up fairly well at the store for the season.

C. A. Allis of the Wietor Bros. force is away on his vacation.

### FLORISTS' CLUB MEETING.

There was a crowded attendance at the regular meeting of the Florists' Club at the Union Restaurant July 7 when an excellent supper was served. President Asmus occupied the chair, assisted by Vice-President Philpott all the way from Winnipeg. Chairman Winterson of the transportation committee reported that the Lake Shore and Michigan Southern Railroad had been selected for the convention trip, leaving August 15 at 5:30 p. m. Fare for round trip \$21.48, on the certificate plan. Further particulars will be found elsewhere in this issue. The committee in charge of the bowling team was admonished to get the bowlers in readiness for the contest at Rochester next August. A picnic was decided upon for July 31 but since the meeting the picnic committee has reported its inability to secure suitable grounds for that date and this matter remains undecided. A. Garland, Des-plaines, H. C. Wendland, Elmhurst, and H. Yepson, Evanston, were nominated for membership. Vice-President Philpott who is also president of the Canadian Horticultural Association, cordially invited all members to attend the meeting of the association at St. Catharines, Ont., August 10-12. St. Catharines is within 12 miles of Niagara Falls.

### NOTES.

Frederick W. Woick and his son Max, 4801-19 S. Robey street, have finished planting. Business has been exceptionally good, they having completely cleaned out their stock and are now looking for plants themselves. S. A. Nutt is the best seller in geraniums with them. Mr. Woick says they are troubled with their plants, the leaves often turning yellow in a single night. The only way he can account for this is that the gas which accompanies the smoke from the locomotives passes through the ventilators and causes the leaves to turn although the flower is not affected. The white fly has been bothering them for some time past but they have lately used hydrocyanic acid gas to get rid of it. Six ounces of water is put in a stone jar and to this is added six ounces of sulphuric acid; three ounces cyanide of potassium in a paper sack is then dropped into this mixture and left to stand in the houses over night. The gas kills every fly in the greenhouse but seems to have no effect on the mealy bug. Great care should be used in preparing this mixture and the minute the cyanide is dropped in every one should leave the house. Mr. Woick stated that after the mixture is used the doors are locked to prevent any one from entering and are not opened until the next morning. Max returned on Monday from Paw Paw Lake, Michigan, where he spent the past week visiting.

Harry Philpott of Winnipeg, Man., has been in the city during the week attending the Florists' Club meeting and banquet as vice-president. Mr.

Philpott is enroute to various eastern Canadian points and will attend the convention of the Canadian Horticultural Association, of which he is president, before he returns. This will be held at St. Catharines, Ont., August 10-12. He will be away altogether about two months and is endeavoring to work up an interest in the trade exhibition of the Canadian society. A few more members of the caliber of Harry Philpott, who takes the trouble to come from Winnipeg for every meeting of the club, would be a good thing. At least it could not then be said that they showed a lack of interest.

James Hain, 2150 West Fifty-first place, reports having done a very good business in the bedding plant line this year. Last week he sold 500 geraniums to the Bohemian National Cemetery Association. Mr. Hain wholesales about one-half of his stock and retails the remainder. His stock this year consisted of about 15,000 plants. Owing to his place being near the railroad he is unable to grow anything in the cut flower line for the flowers become black with smoke and are not in any condition to be put upon the market. New benches and pipes will be put in and the houses painted this summer.

James C. Curran is busy painting his store at 2909 Archer avenue. On Friday he received an order for a design  $2\frac{1}{2} \times 3\frac{1}{2}$  feet; the base was of white carnations and roses. Killarney roses and cypas leaves were used for the border. The design was ordered by a number of doctors and was delivered to 1833 West Thirty-fifth street where the funeral of Dr. L. C. Stoefflaas was held Sunday, July 10. Across the design in purple chenille were inscribed the lines "From his associates. In memoriam to Dr. L. C. Stoefflaas." Outside of the funeral and wedding work business is very quiet.

E. C. Amling has been showing some elegant gypsophila and other hardy plants. Business he says cannot be described as rushing just now and he is giving his help the benefit of the slack time, several of them taking their vacations. Max Awizzus and Ed. Meisselbach are away at present.

Kohout & Merker of the Lawndale Floral Co., 3212 W. Twenty-second street, report business as rather quiet. Ferns will be grown in their houses, now empty. Mr. Kohout has charge of the store and Mr. Merker takes care of the outside work, which consists mostly of landscape gardening.

Ed. Enders, of the Chas. A. Samuelson store, Michigan avenue, left Saturday evening for northern Michigan on a two weeks' fishing trip. Miss Laura White, bookkeeper for the same firm, also left on Saturday night for Denver on a vacation trip.

Edward Eisner, 5523 South Halsted street, had 40 wedding bouquets during June but business is very quiet now. Mr. Eisner spent Saturday and Sunday at Watervliet, Mich., visiting friends and relatives.

H. C. Irish, of the St. Louis Botanic Garden, was a visitor last week, returning with his daughter from a vacation trip to his old home in Rock county, Wisconsin.

John Schoepfle, wife and daughter sailed on the S. S. Potsdam July 12 for a visit to his old home in Baden, the first time in 25 years.

Bassett & Washburn's baseball team desires to arrange dates with other teams for Sunday afternoons. Address Joseph Aohout, Hinsdale.

Visitors: Arthur Schwerin of the Burlington Willow Ware Shop, Burlington, Ia.; H. A. Philpott, Winnipeg, Man.; Geo. Crabb of Crabb & Hunter, Grand Rapids, Mich.; Hubert Morton, Los Angeles, Calif.; E. A. Crooks, Benton Harbor, Mich.; John E. Lapes, Cedar Rapids, Ia.; N. Jarrett, Kansas City, Mo.; Arthur H. Luck, Beatrice, Neb.; Joel Thomas, Fitzgerald, Ga.; Elmer E. Boynton, Syracuse; J. H. Chilson, Sioux City, Ia.

### Excursion Rates to Chicago.

Vaughan's Seed Store, a member of the Chicago association of commerce, calls attention to the fact that round trip excursion rates are in force from most points between the Ohio river and the Mississippi river to Chicago, return limit October 21.

First meeting dates for buying tickets July 16 to July 27.

Second meeting dates for buying tickets July 30 to August 5.

Third meeting dates for buying tickets August 27 to September 2.

Fourth meeting dates for buying tickets September 10 to September 16.

Florists through the west will do well to cut this out and plan their Chicago trips accordingly.

### To Be Done Now.

#### IN THE GREENHOUSES.

A light shade is needed now over almost everything except chrysanthemums and some varieties of roses.

Easter lilies just advancing for bloom should be fed with liquid manure, changing to clear water when the buds are well formed.

A shade on the houses in which carnation benches are being emptied and refilled will enable the help to work in far more comfort and to greater advantage than under the direct rays of the sun.

Now that the fronds on Adiantum cuneatum are getting heavy and well developed great care is necessary in spraying and it is easy to overdo it.

Roses recently cut back, taken up and re-planted must be judiciously watered at the roots but plentifully sprayed overhead.

Carbon bisulphide is death to snails and other insects in the benches if a few drops of the liquid is placed in holes about one foot apart all over the benches. It needs care in use as it is poisonous and explosive.

Place all the callas outside now in order to give them a good rest before starting up again.

### Chinese Red Tuberoses.

PRODUCED BY ARTIFICIAL MEANS.

In regard to the allegation, published in the United States some time since, that the Chinese florists of Tientsin grow tuberoses of a red color, and perhaps of other shades, Consul-General Samuel S. Knabenshue makes the following report:

Some time since, this consulate received a letter from a florist in the United States, inclosing a sum of money, with the request that he be furnished with its value in red tuberoses bulbs. He stated that he had been informed by a gentleman who had traveled in China that he had seen red tuberoses grown by native florists in Tientsin.

Inquiry was made of a German florist here, a resident for many years, who stated that there is no natural red tuberoses, but that the flowers are artificially colored. As the tuberoses of the ordinary white variety is near flowering, the flower stalks are cut off close to the ground and are placed in water in which is dissolved a red earth, of whose composition he is ignorant. The coloring matter is drawn up into the flowers, tinting them red—the first that appear being very slightly tinged, but the color becoming more pronounced in those which open later. He also stated that the red color can be produced in this way by using aniline colors, not only red, but any other aniline color which may be desired. Native gardeners, however, insisted that natural red tuberoses were grown, but declined to sell bulbs of the al-

leged red variety with a guarantee that the bulbs would produce red flowers, the payment to be withheld until the bulbs were tested.

Finally a native gardener admitted that these are bulbs of the ordinary white tuberoses, reared in ordinary flower-pots in this way: The opening in the bottom of the pot is closed with a cork; the pot is filled with earth mixed to a mud with water in which the coloring matter has been dissolved; the bulbs are planted in this after a number of small incisions have been made in the lower half of the bulb above the roots; a thin covering of uncolored earth is placed over the earth in the pot to conceal the colored portion below; and the plant is sup-

TRADE QUIET.

Summer quietness and heat are what we have had the past week, consequently trade has been quiet as a whole and all are being affected with that tired feeling so common in the summer months. One season seems to be enough for the retailers to close their stores early; last season was the one. Again you can get flowers, peanuts, cigars and other luxuries in the warm summer evenings.

### NOTES

There was a meeting of the Florists' Club July 5. The usual number of regulars were present, and considerable business was agitated and some was fairly started, namely picnic matters and the bowling club to Rochester fall flower show. Hall plans were submitted and enthusiastic support given by those there, but unfortunately those most interested and comprising the committee were absent. We know it is summer and the weather is warm. In about two months it will be too late to do anything this year and the committee will put it off another year. They are getting up an appropriate sign, "Buffalo Means Business" (It will not be worked up in flowers).

July was always a month for the florists. This year is no exception and the florists' weddings are in order. First is Jerome Deutscher, who is first assistant at the W. F. Kasting Co. and financial secretary of the Florists' Club, and while enthused with the honor of holding office thought he could hold the heart of Miss Gertrude Neselbusch. Edward Stephan, who has charge of S. A. Anderson's receiving and shipping department, has also embarked on the sea of matrimony and was married to Miss Lulu Fritz. Thus two young ladies have taken two of the Beau Brummels in the down-town district. The best wishes of all are with the newly-weds.

The early fall will see a new wholesale house. F. S. Good, who has been with S. A. Anderson, has formed a partnership with Harvey Halliday, who

### BUSINESS DULL.

"Nothing doing" is generally the answer to the morning calls from the wholesale houses these July days, and while this is not exactly true, it about sizes up the situation. There is the usual summer business, a little in the morning, and in the afternoon a look at the game now and then if the team is at home. The stock of flowers is quite up to the summer standard. Fair Beauties, good My Maryland, bright colored Killarney, a medium grade of white roses and very poor Richmonds. Carnations are in very poor shape and will be so until the new crops arrive. Gladioli are asserting themselves and some very fine stock is offered, notably America, which was never seen better in this market. Early asters are in but are not much to speak of as yet. Sweet peas form an important part of the assortment; the growers appear to have outdone themselves this year, the stock being superb. The copious rains of the past month have helped them very materially. Orchids are fairly plentiful, a few hours' notice generally bringing them in quantity. There are still a few cold storage peonies that are great for decorative work.

### FLORISTS' CLUB MEETING.

The July meeting of the Florists' Club, moved over one week on account of the "Glorious Fourth," was fairly well attended. Mr. Westcott reported for the transportation committee that the carfare to Rochester was the same on both roads from this city, \$8.37 one way. The feature of the meeting of the club was the great enthusiasm stirred up by the address of Mr. Manda, whose subject was: "Is Our Calling a Trade or a Profession?" There was no question as to his idea before he had got very far along, for he believed the labor to be one far removed from trade, to be equal, in fact superior, to many tricks of human effort that are called professions, such as medicine or the law, as these in most cases lived on our misfortunes in health or business, while the results sought by men of our profession was always uplifting. Flowers were used to carry sentiments for all the joyous periods of our lives and to voice our sorrows at the last. The surroundings of the home and of the city of which the home was often a part, was greatly enhanced by the work of the landscape gardener or architect whose work is one of the important branches of the profession. His thought was of the uplifting influences of the entire work or profession from the growing or perfecting of one kind of flower, thus creating a

love for it on account of its excellence, up through the various branches to the great achievements of the gardeners and landscape artists who carry out the wishes of the owners of large estates, who furnish unlimited sums and care not for expense when there is not much returned. Show what can be done, produce great results, and the people, rich and poor alike, will be found willing to take the things offered and look for more. Every effort to elevate the profession should be put forth. We are always learning. There were many beautiful places, but no two were alike. No two men had exactly the same thought. Many men, private gardeners, were underpaid, but if they persisted intelligently they would win out. It is too bad Mr. Manda's remarks were not put on paper as there was so much that was good that should have been read by all. Messrs. Thilow, Niessen, Farenwald, Hahman, Rust, Heacock, Pennock and others took part in the discussion that followed. We do not remember a subject that has been received with so much interest for a long time as this of Mr. Manda.

### NOTES.

The Leo Niessen Co. say that the principal reason for the contemplated move one block further north is that they have outgrown their present quar-

ters, large as these seemed to be, but three years ago. At the new place they will have three fronts, one of 100 feet and two of 60 feet each. Mr. Niessen says it will impose a little more caution on their growers for, as all their flowers will be shown in strong daylight, they must needs be without blemish. Winsor carnations and rose plants for forcing, all staple stock for growers, are to be seen here in quantity.

The Joseph Heacock Co. completed on July 9 the planting of the large house at Roelofs. Sixteen thousand roses were used, 13,000 of White Killarney and Killarney in equal quantities and 3,000 Richmonds. There should be some great stock cut from this place the coming season. Everything about the plant is new, while the old ambition to produce the best is always present and with the opportunity afforded records will surely fly.

Edward Reid spent several days last week in his Packard car amongst the show places of the summer resorts of New Jersey. A trip to the convention at Rochester by the autocar is also contemplated. After five years of service Mr. Reid is getting more out of his car than ever and finds it almost indispensable to him in his business.

Geo. A. Strohle of Dreer's is off on his annual summer tour to Europe, sailing on July 7. He will look over the novelties and make selections for the large azalea importation, which is a feature of the fall business at River-ton.

K.

## New York.

## TRADE AT ITS WORST

The business of the past week was very bad. Nobody in the trade can remember a time when flowers were so cheap and when so much good stock was thrown away. There has been a surplus of everything, roses, carnations, lilies, sweet peas and various other stocks, are all in the same boat. Orchids are not so plentiful but there is little demand, consequently they are about as slow as other stocks. One leading wholesaler figured up at the end of the week that he had received over 26,000 lilies during the week. Other dealers received large consignments and prices ranged from one to two cents per flower. Probably a few very special American Beauty roses sold for 15 and 20 cents each, but there was an immense surplus of inferior stock that went for a song. The best carnations, when fresh, sold for 75 cents per 100 and prices ranged from that down to the dump cart. There is nothing to say about sweet peas, unless it is that there are indications of a drought which may reduce the supply. The tea roses and all other stocks are going at the prices the buyers offer, which in reality are not prices but merely a form which obviates the necessity of getting stock for nothing.

## NOTES

Herman Kretschamer, uncle of A. H. Langjahr, an old time florist of Brooklyn, sailed on July 9, accompanied by his wife, son and daughter, on the steamer Vaderland of the Red Star line for Southampton. The party will spend the entire summer and autumn on the other side, visiting England, Ireland, Scotland, Germany, Holland, Switzerland and Egypt. Mr. Kretschamer stated before starting that he was going to Scotland to verify some of the stories which his friend, John Birnie, has told him about the land of the Leas. In Ireland, he said he intended to kiss the Blarney stone for his old friend, Peter Mallon, of Brooklyn. Peter left Ireland when he was a baby and cannot remember much about it, so Mr. Kretschamer is going to visit his birthplace and find out if they have missed him much since he left.

The Erkins Co., manufacturer and dealer in garden decorations, at 305 Madison avenue, has made an assignment to Timothy F. Fay, and a petition in bankruptcy has been filed

against it. The business was started in 1902 by Henry Erkins and this company succeeded to it in September 1907; but it is said Mr. Erkins was not interested in this company. It was incorporated with a capital stock of \$75,000, which was increased to \$100,000 in February, 1909, but it never had any rating at Bradstreet's.

The outing of the New York and New Jersey Plant Growers Association was held at Lake Hopatcong, N. J., July 7. About 75 persons attended and it was a very enjoyable event. There was bowling, boating on the lake and various other amusements. A noteworthy feature was the excursion on the lake of Philip Einsman, John Donaldson and C. W. Scott, Mr. Einsman rowing the boat and paying all charges.

A dividend of 10 per cent, payable July 16, has been declared by the directors of the New York Cut Flower Exchange. While the exchange people do not make as much noise as some others do, they seem to arrive.

The death is reported of John J. Seifert, for many years a grower at Ravenswood, Long Island City. He was a stockholder in the New York Cut Flower Exchange.

While the drought has not as yet had any appreciable effect on market conditions, if it continues its influence will soon be felt.

George Golsner and wife and John Miller and wife are expected home from Europe about August 2.

## Cleveland.

There is not much activity in the flower markets these days, the weather being very warm. All the stock shows the effects of the heat. Water lilies are selling quickly, being used for all purposes—table decorations or funerals, etc. Sweet peas are having a little better call. Asters and outdoor gladiola are expected in very soon now. Greens of all kinds are overplentiful. Gypsophilum meets with a fair demand.

There have been several inquiries by ladies who are in the floral business regarding the convention. They will be very welcome, and will be well taken care of. All florists are urged to bring their wives and make this year a better showing than ever before.

The Cleveland Florists' Exchange is remodeling its office so as to give much needed floor space and counter room.

## Greek-American Florists' Ass'n Outing.

The fourth annual outing of the Greek-American Florists' Association of New York was held at Witzel's Point View Grove, L. I., on Thursday, July 7. It was the most successful event of the kind ever held by the association, which from the first has been noted for the successful management of its outings. About 600 persons were present, including many florists who are not members of the association. Much credit is due Geo. D. Nicholas, the very clever president, and his efficient committees. The baseball game was between teams of Greeks and Americans. Wm. A. Hanft, the well-known designer for Young & Nugent, being the umpire. On the arrival at the grove of the steamer Isabelle, breakfast was served, after which the games and other sports were in order. Before the return trip for the city, there was a substantial dinner. Many Americans who attended speak highly of the arrangements. The results of the various events follow:

Girls' race, five to seven years, 25 yards—Miss L. Pullits, first.  
Girls' race, eight to ten years, 50 yards—Miss B. Siegel, first.  
Boys' race, five to seven years, 35 yards—Polykranas, first.  
Boys' race, eight to ten years, 75 yards—Karo, first.  
Young girls' race, twelve to fifteen years, 100 yards—Lyberion, first.  
Young men's race, thirteen to fifteen years, 200 yards—Hepner, first.  
Young ladies' race, sixteen to twenty-two years, 160 yards—Hoebel, first; Bromer, second.  
Unmarried ladies' race, 160 yards—Harocopeos, first; Cardasis, second.  
Young men's race, sixteen to twenty years, 440 yards—Barezeros, first; Crosby, second.  
Men's race, two miles—Ruth, first; Rigo, second; Zerecos, third.  
Sack race, 50 yards—Shaeson, first.  
Potato race, 50 yards—Hepner, first.  
Fat men's race, 150 yards—Jones, first; Jacobs, second.  
Baseball, Greek-American vs. American team—Greek-American captain, G. Mitras; W. H. Hanft, American captain; H. Rickerts, umpire.  
Score: Americans, 7; Greek-Americans, 4.  
Discus throwing—Rovatos, first; Georgopolis, second.  
Plain jumping—Georgopolis, first; Zervacos, second.  
Bowling—A. J. Guttman, first; Connor, second.

SPRINGFIELD, O.—Opha Jackson returned, July 5, from a business trip through the east.

MAYNARD, MASS.—A new greenhouse is being erected for Albert Bayley & Son, 50x135 feet. It will be equipped with all the latest improvements.

**Boston.**

The business of the past week was very quiet. There were very heavy arrivals of roses, carnations, sweet peas and other stocks, in fact everything was plentiful and it was impossible to move all of it. There were no fixed prices, the great desire being to unload the stock. In the retail stores there was considerable funeral work which made up the largest part of the business. A leading retailer remarked that it has been his experience that the first two weeks in July are usually the duller weeks of the year. It therefore seems that business cannot get much worse. It is at least certain that the supply of carnations will soon greatly decrease on account of the throwing out of plants. Both the Park street markets will close at 12 o'clock noon on Saturdays during July and August.

**NOTES.**

W. C. Hastings, salesman for Nelson & Johnson in the old Park Street Market, has gone to Nantucket for a vacation. During his absence Samuel Buck takes his place. On leaving, his friends gave him lots of advice, such as, not to alight before the train stopped and not to swim in deep water.

Harry Schenck, an old time New York florist, at present with Sidney Hoffman in his State street store in this city, has just returned after spending a short vacation with relatives in New York, one of whom is his brother, Charles Schenck, of Traendly & Schenck.

Joseph White of W. E. Doyle's Beacon street store, starts this week to spend his vacation at Old Orchard, Me. He will go over the road on his bicycle, this being his fifth season of similar exercise.

Chas. Robinson is spending a month at Breton Woods, N. H. Thomas Pegler, who represents a number of well known growers in Park Street Market No. 1, is himself a grower and can talk interestingly on many features of the business.

There are prospects of a very large delegation from this city to the coming S. A. F. convention at Rochester. A number have signified their intention to be present who do not usually attend.

W. H. Elliott and family have taken up their residence for the summer at Medbury, N. H., but Mr. Elliott is frequently seen in the city.

Henry Penn and wife will sail this week for a two months' vacation in

Nothing like a drought has disturbed this section of the country. Instead, we have been visited by a prolonged rainy spell that boded no good to growers. Greater care than usual has been necessary to prevent plants from damping. Carnations are affected and fear is entertained that they may later develop disease. However, the growers are housing their winter stock and will watch results closely. The scarlet bedding geranium does not do well when there is so much rain, and plants have been affected not a little.

Geny Bros. report their stock in fine condition for the coming season. They have one house of American Beauty roses in fine condition, already some three or four feet high, with vigorous healthful growth and they will no doubt produce fine flowers next winter. These enterprising brothers have recently completed two new houses 30 x200 feet, made of cypress and iron. In these they have grafted roses of the finest and most popular varieties. They have also just finished a house for chrysanthemums 18x200 feet and a propagating house 200 feet long. All these additions have been made at their new place on the Morrow road. Their chrysanthemums are in fine shape for the earliest blooming. They are growing Jennie Nonin, Golden Eagle, Golden Wedding, Chadwick, Bergman, Ivory, Robertson, October Frost and some other varieties with which they will be abundantly able to supply their ever growing trade.

McIntyre Bros. have purchased 57 acres of land on the Tennessee Central railroad on the one side and the Lebanon turnpike on the other, and have already erected some houses on the property. They found their home place too small for their purposes, and it was growing too valuable as town lots, although very convenient for business, doing away with the necessity of an up-town store. They have always transacted all their business from the greenhouses with the exception of a stall in the market house.

## Northern Indiana Florists.

The Northern Indiana Florists' Association will hold its third annual meeting at Winona Lake, Warsaw, July 20. Election of officers will take place at this meeting. It is important that every member of the society be present. All florists in the northern part of the state are earnestly requested to attend and become members. This association is rapidly pushing to the front, having recently secured articles of incorporation, adopted new constitution and by-laws, and added a number of new names to the membership.

Winona Lake is one of the most beautiful resorts in the northwest, a delightful place to spend a few days. The florists of northern Indiana cannot afford to miss this opportunity of getting together for business and pleasure combined.

Baltimore.

We are spelling summer here now with the biggest sort of capital letters. The volatile mercury thinks nothing of flirting around the tender susceptibilities of the 95 degree mark, and the nights are almost as enervating as the days. The drought continues, except in restricted localities, a local shower in the city here on Sunday letting down six-tenths of an inch of water, whilst beyond the corporate limits there was not a drop, reversing the old aphorism that the rain falls equally on the just and unjust. Outdoor stock naturally is suffering, and in some dry soils and sunny exposures the need of moisture is greatly felt. Trade languishes, as is natural. There is the customary funeral demand and the supplies required for hospitals never ceases. This is a city of hospitals (as it is one of colleges and libraries) there being some 52 in operation. As a consequence, the requirements of flowers which go to the various hospitals as messengers of sympathy, hope and encouragement from friends and families of the afflicted, often thousands of miles away, makes an aggregate which would not be dreamed of by those who do not see the evidences of this ever expanding traffic.

Preparations are being made by those whose duty it is to exploit the productive capacity of our state to display at the great horticultural exhibitions which are to be held in the west during the summer and fall, examples of the fruits grown here. These will be gathered as they are in season and put in cold storage to await the dates of the exhibitions. There is much exultation over the capture last year at the shows at Vancouver and Council Bluffs of the prizes for apples by fruit sent from Maryland orchards, over those of the famous apple belts of the west and northwest. In size, beauty of appearance, high color, and especially in flavor, the Maryland products led all others. The adaptation of the soil and climate of our state to the production of apples is a good deal of a revelation to our own people. They always believed that the state was peculiarly the home of the peach, and her orchards for generations have been famous, but on the very lands where the luscious peach has ceased to be grown profitably, bearing orchards of apples have supplanted it, the shifting light sands of certain localities, formerly assumed to be absolutely unfitted for the apple and the pear, giving profitable evidence that they furnish the loams and the pabulum to bring forth both fruits in absolute perfection.

The semi-annual meeting of the Florists' Exchange was held July 11. The proceedings were formal and without public interest, except the statement,

heretofore referred to, of the growth of the business done by the establishment. The gains for the six months from January 1 to June 30 is about 20 per cent over the figures of last year, and the increase to the actual value of the corporation is nearly as large.

The Capital boys came over Saturday evening for a friendly bowling game between the two teams which are to represent Washington and this city at the convention in Rochester. As usual, the monumental city lads were left 'way behind. They said (they have always, of course, an explanation) it was too hot for the fat men of their team; whereas it just suited the Washington gang, who, being used to baking their eggs on the asphalt pavements, take the 100 degrees as a matter of course.

Indianapolis.

For the past two weeks stock has been mighty scarce for the retailer, but fortunately the gladioli and feverfew have put in their appearance and afford us a better assortment. Sweet peas have been of rather poor quality. At this late time of the year there seems yet to be a demand for bedding and vase work. The layman has been a little wary on account of the cold spring and has therefore put off having the family vase at the cemetery filled.

Smith & Young Co. have devised a greenhouse railroad running on tracks between the benches, on which they carry out the old soil and bring in new. When a car has been filled in the greenhouse, three or four men push it along the track out to the soil pile and after the load has been automatically dumped the men get aboard the car and coast back to their place in the greenhouse. This is proving to be a very successful and speedy plan to replenish the benches with fresh soil, which heretofore had always been dreaded.

The extremely heavy rain on Monday flooded the entire down-town district and seeped into the basement of A. W. Brandt's store to the depth of six inches, damaging several rolls of wrapping paper and about 200 cut flower boxes.

St. Louis.

The weather during the past week has been warm with frequent rain. We are now in the midst of summer dullness, and there is nothing doing, funeral work being the only outlet for flowers. Sweet peas are not so plentiful, and those of good quality, in limited quantities, are saleable. Gladioli are coming in freely and are selling fairly well. Asters have not as yet made up much of a showing. Those that are in are mostly single and showing yellow centers. Carnations are getting smaller and smaller. White has had a slight call for funeral work, but have been sold cheap. A good many roses are in, but many of the growers have thrown out and are throwing out still. Tuberoses are expected soon. They are somewhat late this season.

## NOTES.

A committee of three was appointed at the meeting of the Retail Florists' Association, consisting of Chas. Schoenle, Robert Windler and Conrad Bergstermann, to endeavor to stop the practice of crepe pulling through the daily press having notices daily over and above the death notices condemning the practice of ringing doorbells and soliciting orders from the bereaved families. What effects these notices will have will be proven in a short time; either they will prove an advertisement for the agent or the cutting out entirely of this mode of getting and doing business.

The Florists' Club has mailed to every florist a circular and invitation to attend its annual picnic, July 31, at Ramona Park. Every florist is invited, even if not a member of the club. This shows a fraternal spirit which is most commendable and should be appreciated by all those who are anxious to knit together all parties who have at heart the uplifting of the trade in general.

Anna Wohlfahrt, saleslady at the store of the Kelley Floral Co., Eighteenth and Olive streets, was married July 27. Mr. Kelley expects to take a vacation next month and will visit Chicago. The Kelley Floral Co. has a splendid show of gold fish in the windows, and these, together with choice cut flowers, make a fine showing to the public.

John J. Bentzen has made a standing offer to Frank Windler, salesman at the W. C. Smith Wholesale Floral Co., to wrestle catch-as-catch-can, best two out of three falls, at picnic, for \$10 a side. What is the matter with Frank, as no reply has as yet been received? Has he got cold feet?

Will Smith, of the W. C. Smith Wholesale Floral Co., Vincent Gorly and Robert Windler leave Monday to attend the Elks' convention in Detroit. Will Smith will visit Chicago and Mil-

Montreal.

## The Seed Trade.

### American Seed Trade Association.

E. L. Page, Greene, N.Y., President; L. H. Vaughan, Chicago, First Vice-President; M. H. Duryea, New York, Second Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

LEONARD SUTTON of Reading, Eng., has returned, much pleased with his American tour.

WISCONSIN pea growers in the lake shore section report very serious drought damage.

ANTON C. ZVOLANEK, Boundbrook, N. J., has just returned after seven weeks' trip to California.

W. ATLEE BURPEE is reported to have given up his European trip and is at work on his 1911 catalogue.

THE bouquet green crop in Wisconsin is likely to be affected by the severe drought and the forest fires which are reported.

CHAS. P. BRASLAN was enjoying London and arrived at New York July 12, reporting European seed crop conditions very bad.

FREESIA PURITY bulbs are reported very short crop owing to the frosts of last winter, which seriously checked the growth of the bulbs.

ALBERT DICKINSON, the veteran Chicago seedsman, still rolls up scores of 200 and over on the bowling alleys and is quite partial to the game.

VISITED CHICAGO: Robt. Buist, of Philadelphia, enroute to visit friends at Los Angeles and incidentally to visit seed growers on the Pacific coast; Emil Hartner, of Sawdey & Hartner, Denver, Colo.

ONION SET CROPS at Chicago have been helped but little by the few spotted showers. The crop has no doubt been materially reduced by the continued drought. The sets are bot-toming now.

THE insecticide bill became a law April 26, to take effect January, 1911. It carries a prison penalty. Seedsmen who handle insecticides will do well to secure from their congressman a copy of the law.

WEEBER & DON, Ridgewood, N. J., has been incorporated to deal in seeds, bulbs, agricultural implements, etc.; capital \$100,000. Incorporators: Alex. L. Don, Emma C. Don, Alex. Lee Don, all of Ridgewood, N. J.

SOME of the Bermuda growers are unable to complete their orders for Lillium Harrisii bulbs.

THE Blue Grass trust seems disposed to mark up prices for that article beyond all recent records; 21 cents per pound is hinted at.

CHICAGO.—Prices on the board of trade July 13 for grass seed were noted as follows: Timothy, \$5 to \$6 per 100 pounds. White clover, from 20 cents to 25 cents.

THE shipments of onion seed from the Canary Islands to the United States in 1909, writes Consul Solomon Berliner, of Teneriffe, were valued at \$55,586, an increase of \$26,040 over the previous year.

### The Fottler, Fiske, Rawson Co.

The H. E. Fiske Seed Co., W. W. Rawson & Co. and Schlegel & Fottler, Boston, Mass., have combined. The new firm will be known as the Fottler, Fiske, Rawson Co. The headquarters will be at 12-13 Faneuil Hall square, recently the store of the H. E. Fiske Seed Co. and prior to 1906 W. W. Rawson & Co. were located there. The new firm has issued a prospectus in which it is said that it is the intention of the corporation to have one of the finest stores in this country.

### Short Pea Pack Probable.

It is reported in advices from state pea packers that the pack of late peas will be cut short as a result of continued dry weather. A report has been current that some packers are willing to buy back a portion of their early contracts. This report is generally conceded as possible. Regarding the outlook a well-known broker in this market said:

"My packers write me that there has been no rain for close upon three weeks and that the pea fields are burning up. The pack of late wrinkled peas will be short of the nominal, and this in conjunction with the short pack of early peas is bound to have its effect on the market. There is a short pack in all the western sections and in my opinion the market this fall is going to be higher. The jobber who buys now will have no trouble in getting a profit over his original cost."—New York Commercial.

### Canada Bluegrass.

Farmers' Bulletin No. 402, just issued by the Department of Agriculture, entitled "Canada Bluegrass: Its Culture and Uses," by R. A. Oakley, is summarized as follows:

Canada bluegrass has the same general distribution as Kentucky blue-

grass, but is not so abundant. It is of the most importance in the New England states, New York, Pennsylvania, Virginia, West Virginia, and in southern Ontario in Canada. It is also common in parts of Ohio, Indiana, Illinois, and Missouri. It is found in the greatest abundance on various types of clay soil. It can readily be distinguished from Kentucky bluegrass in a field by its dark blue color, short leaves, flattened stem, and short, compact seed head.

Canada bluegrass is of value chiefly as a pasture grass and makes good grazing for all kinds of farm stock, especially beef and dairy cattle. The quality of hay produced is good, but the yield is not sufficiently high to make it of much value for this purpose. As a soil-binding grass it is of considerable value on clay embankments, since it establishes itself readily and makes a tough sod that resists erosion.

Canada bluegrass should be used as a lawn grass only under few conditions, as it does not make a turf of good texture. On some clay soils it can be used to advantage either alone or in mixtures with other lawn grasses. It can also be used to advantage in some sections on golf links. Seed of Canada bluegrass is harvested and thrashed in practically the same manner as timothy, orchard grass, or reedtop, and for this reason it sells for much lower prices than Kentucky bluegrass. On account of the close resemblance between seed of Canada bluegrass and Kentucky bluegrass and also on account of the cheapness of the former, it is used very extensively as an adulterant of the latter. Most of the seed sold in this country is grown in lower Ontario, large quantities being imported each year.

Little difficulty is experienced in cleaning the seed of Canada bluegrass for market. By use of the ordinary fanning mill the quantity of inert matter can be reduced to at least five per cent and the weed seed to one-half of one per cent with very little loss of good seed. The hay or straw from which seed is thrashed makes a very good roughage for live stock if properly handled, but is less valuable than the hay before thrashing. Canada bluegrass volunteers readily, and chiefly for this reason there is very little seed corn. Where seeding is practiced, 15 pounds or more per acre are recommended to be sown in the early spring on wheat. When it becomes desirable to break up old sod it can be done to best advantage by plowing in the fall rather shallow and turning the furrow completely. This smothers the grass and at the same time exposes the roots to the action of the frost. Corn is probably the best crop to grow on sod land.

### Mastin's Automatic Sprayer.

J. G. Mastin & Co., 3141 West Lake street, Chicago, are turning out an average of 500 spraying machines a month, getting orders from all parts of the country. The new whitewash nozzle has proved a great success with all who have used it. A smaller spraying machine holding about two quarts for use in greenhouses will soon be on the market. It is made similar to a quart measure, with a handle in a about the same position. The machine can be held in either hand with the four fingers, the thumb of the same hand being used to press the valve above the handle which starts the machine in action. It is a very handy machine and is sure to meet with great success.

## N E C W R O P SMILAX SEED

Ounce, 25c; ¼ lb., 75c.

Vaughan's Seed Store  
CHICAGO. NEW YORK.

### In the Garden.

Come out into the garden, Maud,  
And bring the spade with you,  
And bring those packages of seeds  
Our congressman sent, too;  
And we will spade the garden up  
And fix it nicely, dear,  
And plant our seeds in little rows,  
For gentle spring is here.

We'll plant the early marrowfat  
And radishes and beets,  
We'll plant the pumpkin and the gourd  
And other kinds of eats;  
And we will plant the Boston bean—  
Why do you act so queer?  
Come out into the garden, Maud,  
For gentle spring is here.

Come out into the garden, Maud,  
And gather up your skirt,  
And bring the spade, you know I said,  
And push it in the dirt;  
And we will plant some succotash—  
We'll like it, never fear—  
And fool the boosted price of things  
Since gentle spring is here.

Now push the spade into the ground  
In manner free but firm,  
And make a place to plant these things—  
Hey! Hold on! There's a worm!

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President; Franklin DeKleine, Grand Rapids, Mich., Vice-President; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary; M. L. Ruetenik, Cleveland, O., Treasurer. Annual meeting at Grand Rapids, Mich., Sept. 27-29.

THE acreage of cauliflower on Long Island this year is 25 per cent above that of last season.

C. C. WAITE, New York agent for the Florida Citrus Exchange, was in Chicago last week on his way to California.

THE Danish Ballhead cabbage requires richer soil and a longer season of growth to bring it to perfection than the pointed American types.

NEW YORK.—The fruit and vegetable market is over-stocked with outdoor products, and no satisfactory quotations can be given on indoor stock.

CELERY growers around Milwaukee and other Wisconsin points report that only about a fourth of the crop survived the bad spring and that drought has injured what was left. The supply for the state will have to come from other sections.

NEW IBERIA, LA.—The Truck Growers' Association met June 24 and a great many new members were added. Among these were a number of large planters, who will plant several acres each in small vegetables next season. The watermelon crop is moving well.

THE Niagara Mushroom and Spawn Co., Lockport, N. Y., has been incorporated to raise and deal in mushrooms and mushroom spawn; capital \$6,000. Incorporators: Clay W. Parsons, Chas. L. Papworth, E. Clarence Papworth, all of Lockport, N. Y., and three others.

### Greenhouse Notes.

At this time of year there are probably only cucumbers and tomatoes in commercial houses. These can be made to pay handsomely, as the cost of handling is less than in the winter months. Many growers fail to get best results simply because they starve their plants and allow them to be overcome by heat, both leaf and root. Shade is needed, besides a good mulch of manure and ample water. Indications are often very misleading and the careful grower will dig down deep occasionally to ascertain existing conditions of soil. These plants need great amounts of potash and phosphate, hence we add fine bone meal and sulphate of potash to the manure mulch to balance the plant food. The striped cucumber beetle is a great enemy—he is the direct cause of the wilt disease and every effort should be made to keep him out. Hand picking on cool days or very early in the morning, tobacco dust blown through the plants, or screening doors and vents are remedies. Tomato vines should be topped when the last cluster of fruit has set, allowing five weeks for the fruit to mature.

MARKETMAN.

## Simon's Hot Weather Lettuce

Has made good. It will not scald or burn. It does not rot under earth. It is the best butter head variety to sow during the summer months, offered to-day. Now is the time to sow it.

### Market Gardeners' Association.

The third annual convention of the Greenhouse Vegetable Growers' and Market Gardeners' Association of America will be held at Grand Rapids, Mich., Tuesday, Wednesday and Thursday, September 27, 28 and 29, and promises to be the most successful ever held by that organization. A splendid programme is being prepared and subjects of interest to the vegetable forcer, market gardener and truck farmer will have a place in it. Grand Rapids is the home of Grand Rapids lettuce and Davis Perfect cucumber, and the convention will afford an opportunity to visit the famous forcing establishments in that city. Any vegetable grower desiring further information should write to S. W. Severance, Secretary, 508 Walker building, Louisville, Ky.

### Time Required for Maturation of Vegetables

A paper read by A. Walker before the Montreal Gardeners' and Florists' Club July 4.

Tomatoes, lettuce and radish were started at different dates during the fall and early winter for the purpose of obtaining some definite information as to the time required for the maturation of these crops under glass during the winter months. The greenhouses in

## Success In Market Gardening

north and center benches receive practically full light.

Duplicate tests were conducted with tomatoes on the south and north bench results of which are here given. The plants were spaced 18 inches apart and the yield and net returns are calculated per square foot of bench area. It will be noticed that the planting made on the south bench August 16 and September 16 were a complete failure while those on the north bench planted at the same time and given same conditions except as to light gave fair returns. The variety Livingston Globe was used and the crop netted 20 cents per pound. As light is such a controlling factor in the winter forcing of vegetables, especially in securing a set of fruit on tomatoes, plants were spaced 17, 18 and 19 inches apart on the north bench. The results would indicate that closer than 17 inches is not advisable. It will also be noted that plants from seed started after the middle of August did not give satisfactory returns, the July planting averaging 28 cents, August planting 20½ cents and the September planting 5½ cents per square foot of bench area.

It will also be noted that the average of early and late sowings from date of sowing to end of harvest required 190 days, being in the bench 145 days, and the fruiting period continuing for 86 days. The average of the August sowings required 225 days from date of sowing to end of harvest, being in the bench 175 days and in fruit for 91 days. The average of the September sowing was 200 days, being in the bench 151 days and in fruit for 55 days. From plot No. 2, seed sown July 22, fruit was harvested for two months and during the first month, November 19 to December 19, 35 pounds of fruit were harvested against 6¼ pounds for the following month, December 19 to January 19. On plot 5, seed sown August 16, the first fruit was ripe December 28 and continued to March 29, practically three months, giving a fairly uniform supply during those months. On plot 6, seed sown September 16, the first fruit was ripe February 14 and lasted to April 10, about two months, giving a very low average yield.

#### Soda Bordeaux.

Soda Bordeaux is made from copper sulphate just as the ordinary Bordeaux mixture. It differs, however, in that caustic soda is used to neutralize the acid property of the bluestone instead of lime; and that the final mixture contains sodium sulphate instead of calcium sulphate (gypsum). The resulting form of the copper, copper hydrate, is exactly the same, and exerts the same fungicidal power, says Bulletin 171 of the Ontario Agricultural College. The main point in connection with this mixture is that caustic soda is an extremely active alkali, and any amount of it added over and above that required to combine with all the copper will destroy foliage. Therefore, in making soda Bordeaux, it is important to add just the exact quantity of the soda required to change all the bluestone to copper hydrate. This is done by adding the soda solution slowly to the copper solution, mixing thoroughly after each addition, and testing for the neutral point with litmus paper. The moment the litmus paper takes on a faintly blue tinge is the time to stop adding. The copper is then all in the form of a sediment and any more alkali added will be left in the free state.

The following tentative formula can be given: Soda, two pounds; copper sulphate, six pounds; lime, five ounces; water 40 gallons.

In making, add three-quarters of the

WESTERN SPRINGS, ILL.

soda solution at once, mix thoroughly and then add the rest gradually, mixing and testing until the proper quantity is present. It may not require the whole amount recommended, and it may require more, depending upon the quality of the soda. When the alkaline value of a sample of soda is once ascertained, then one can proceed with much more rapidity. The small amount of lime is added to make the mixture decidedly alkaline, and therefore, safe, and to cause the precipitate to remain blue instead of changing to dark brown or black, which it does after standing some time where an excess of soda is used.

Caustic soda can be bought retail or in drums of 100 pounds, from or through any chemist, while Gillette's

lye, which is familiar to everyone, is a convenient form of soda for use in making this mixture. Soda Bordeaux has an advantage over the ordinary Bordeaux in that it is just as good a fungicide, and at the same time is made without the labor of slaking and preparing lime. There are disadvantages, however. Great care is necessary in the addition of the caustic soda. Any added in excess is dangerous to foliage; an excess of lime is not harmful, though not advisable. Unless exactly neutral, the addition of an arsenical to soda Bordeaux to impart to it an insecticidal power, is dangerous. Any free alkali will act upon the arsenic compound and form sodium arsenite, which, being soluble, will scorch foliage.

## The Nursery Trade

### American Association of Nurserymen.

W. P. Stark, Louisiana, Mo., President;  
E. S. Welch, Shenandoah, Ia., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-sixth annual convention to be held  
at St. Louis, Mo., June, 1911.

CHICAGO: W. A. Peterson with Mrs. Peterson and a party of friends, will start on an extended automobile trip July 25, going east.

PINE ORCHARD, CONN.—Peter K. Boscho, representing a landscape firm of New York, is in charge of the work of improving the vicinity of Blackstone park.

GLEN BROS., of Rochester, N. Y., have acquired 64 acres of splendid land adjoining Wappinger's cemetery at Wappinger's Falls and will remove their offices and business there in the fall, according to the Poughkeepsie Enterprise.

### Rust in Roses.

ED. AMERICAN FLORIST:—

What is the best remedy for rust on outdoor roses and how should afflicted plants be treated? C. D. W.

When badly attacked nothing but cutting away and burning all affected shoots can save the plants, but when taken in hand early and sprayed with Bordeaux the disease can be kept in check. A bad attack sometimes causes the loss of the entire plant. The use of soot in a dry form is often recommended, also watering and spraying with well diluted soot water. G.

### American Nurserymen's Protective Ass'n

The officers elected at the Denver convention last month were as follows:

J. W. Hill, Des Moines, Ia., president.  
Irving Rouse, Rochester, N. Y., first vice-president.

Thomas B. Meehan, Dresher, Pa., secretary.

Peter Youngers, Geneva, Neb., treasurer.

### EXECUTIVE COMMITTEE

J. W. Hill, Des Moines, Ia.; Chas. J. Brown, Rochester, N. Y., Section No. 1; H. P. Chase, Huntsville, Ala., Section No. 2; J. H. Dayton, Painesville, O., Section No. 3; D. S. Lake, Shenandoah, Ia., Section No. 4; E. R. Taylor, Topeka, Kans., Section No. 5; J. S. Kerr, Sherman, Texas, Section No. 6.

### Ellwanger & Barry, Rochester, N. Y.

For two weeks a magnificent exhibition of roses has been open to the public daily except Sunday at the nurseries of Ellwanger & Barry in Mt. Hope avenue, says the Rochester Democrat and Chronicle. Millions of roses are in bloom on these grounds and present a spectacle of great beauty. The flowers fill the air with perfume and delight the eye. In the exhibition are all varieties, and the collection, comprising many acres of bushes, is one of great interest. At present the earlier varieties are beyond their prime, but the climbing roses and the many varieties of ramblers are at the height of their glory. Many of the clusters contain hundreds of blossoms and for fragrance, beauty and diversity and richness of color, they rival the old favorites, which confine themselves to low growing bushes.

# A BLUE ROSE

## The Greatest Rose Novelty of the Century

*It flowered with us this season and was greatly admired.*

The New Rambler (Violet Blue), hailed by the German rose growers as the forerunner of a genuinely cornflower blue rose, is a seedling of Crimson Rambler, very vigorous and hardy, and free blooming.

**S. A. VOSTERS & SONS,**

**RIEL, HOLLAND.**

A departure in training rose bushes is noticed at the nursery grounds. The bushes are trimmed to a single stalk, or, rather, are trained to a single stalk, which grows to a height of about six feet when it branches out in umbrella shape and spreads aloft a veritable canopy of blooms. The effect of long lines of these rose plants trimmed in this fashion is very attractive. One of the exquisite novelties to be seen by visitors to these gardens is Magnolia macrophylla, a large tree that bears flowers a foot in diameter. Each flower is surrounded on the same stem with a guard of large leaves, which form a splendid setting. At every point in the grounds the visitor discovers something rare and interesting in trees or shrubs. Magnificent elms are there, horse chestnuts that bear beautiful blossoms. Acer Negundo, with its white, silver and green foliage, and the Japanese ginkgo, which has foliage similar to the maidenhair fern. There are oaks and beeches, birches of stalwart size and great beauty, and the Japanese maple with its glowing color to offset the green of the pines and spruce. Nearly every variety is to be found in these gardens. No other city has such a fairyland within its borders.

### National School of Forestry.

A bill to establish a national school of forestry at Nebraska City, Neb., as a memorial to the late J. Sterling Morton, father of Arbor day and of the injunction, "Plant trees," has been introduced in the senate by Senator Elmer J. Burkett, of Nebraska. The bill authorizes an appropriation of \$250,000.

### Infected Nursery Stock.

Consul-General George N. West, of Vancouver, B. C., furnishes the following particulars of a large amount of imported nursery plants destroyed by fire in British Columbia, under the direction of the provincial inspector of fruits and orchards: "The trees destroyed came from Japan, Germany, Holland, Belgium, France, the United Kingdom, and from the United States, and consisted of some 30,000 trees and plants infected with San Jose scale, borers, root gall, apple-tree anthracnose, pear blight, and all the other various fruit tree diseases known. The trees included apple, pear, quince, peach, apricot, crab, nectarine, small fruit, and ornamental shrubs. The inspector stated that there was enough infection destroyed in this lot to have infected the whole of British Columbia.

"Not only is the imported nursery stock inspected, but all the nurseries throughout the province. No company or individual is permitted to distribute trees until they have passed inspection by competent inspectors. The same rule is followed regarding the sale of fruit, and there is not a package of infected fruit sold in British Columbia today. All is carefully inspected, and if found to be diseased is condemned and cremated or sent back to the country from which it was shipped. This rule is applied as strictly to eastern Canadian grown fruit as it is to fruit grown in the United States. The policy of the department is to maintain absolutely clean orchards and clean, wholesome fruit, with a maximum of profit to the grower. Importations this year have been unusually large.

"Nurserymen sending stock into British Columbia that is at all infected stand to lose, because they have to bear the loss when it is destroyed. Praise was given to the nursery stock and fruit imported from Utah. It is to the interest of growers of nursery stock in the United States to take particular care to see that any stock sold to be used in the province of British Columbia is perfectly clean in every respect, and shippers of fruit should also be sure that the fruit and packages are entirely free from parasites; otherwise it will be condemned and not allowed to be used in the province."

Wm. Warner Harper, Prop.  
Chestnut Hill, PHILA., PA.

Pittsburg.

There is very little satisfactory stock coming into this market at this writing. Carnations could hardly be worse while Beauties and other roses open so quickly that they are far from satisfactory. Sweet peas sell well when good, but the hot weather wilts them almost as soon as they are cut. Gladioli and the few asters that are seen sell well. The severe drought has much affected outdoor flowers and vegetables, some of the latter being an entire failure. Greens move out very nicely. Other outdoor stocks are slow sellers.

### NOTES.

Among those on vacations are: W. Q. Potter of the McCallum Co., at his old home in Greene County, Jack Frampton of Zieger Co., Clarion, and Edw. Ashcraft of the Pittsburg Cut Flower Co. Among those ready to go are: M. F. Stafford, of the Zieger Co., and W. A. Clark, who intends to go with Knights Templar Commandery No. 1, for a lake trip.

Ernest Fisher, formerly manager of the South View Floral Co., has accept-

Magnifica, 2½-in. \$15.00 per 100.

HENRY H. BARROWS & SON, Whitman, Mass.

Cincinnati.

The general summer depression is felt by everyone connected with the business in this city. Here and there a little funeral work and then it ceases. We cannot complain about the quality of stock as some really good carnations are to be had, also roses, valley, Longiflorum lilies, Shasta daisies and gladioli. This about constitutes the stock in trade and we regret to state that a good deal is left after the day's business is over. All one hears is florists' picnics and vacations and it seems employers and employes alike are more interested in these than in doing business.

The annual meeting and election of officers of the Florists' Society was held on Monday afternoon at Gus Adrian's home in Clifton with 28 members present. The following officers were chosen to guide the destinies of the society for the coming year:

C. E. Critchell, president.  
Wm. Murphy, vice-president.  
Alex Ostendorp, secretary.  
E. A. Foster, treasurer.  
Herbert Greensmith, director.

The outing committee reported everything in readiness for the picnic. The question of sending a bowling team to Rochester to represent our city in the national bowling tournament of the S. A. F. was brought up, but it seems as though the majority of our members are averse to spending a little money to advertise their home city and the project fell through. Mrs. Adrian did the elegant with a fine Dutch lunch and the meeting adjourned with three cheers for Mr. and Mrs. Adrian.

As the S. A. F. convention draws near we begin to look around to see who is going to Rochester. Thus far only two have signified their intention of going, Dan Carmichael and Albert Sunderbruch of the J. M. McCullough's Sons Co. This firm will have an exhibit of Paragon sprayers at the convention and will send representatives to demonstrate the same.

A. Sunderbruch's Sons are cutting some excellent valley and Longiflorum lilies and the wholesale houses find it very handy to call on them when in need of any of the above.

Miss Bossmeyer, bookkeeper and stenographer at Critchell's, and Miss Clara Kyrk of McCullough's Sons Co. are on their vacation.

Miss Margaret Austead is on the sick list and Mrs. John Freis is at Martinsville, Ind., taking treatment for rheumatism.

P. J. Olinger spent Wednesday and Thursday of the past week at the New Castle greenhouses.

J. W. Rodgers has disposed of his greenhouse establishment to W. H. Rutenschroer.

Wm. Mueller, Central avenue, has sold his store to Hauck Bros. S.

C. E. Critchell.

President Cincinnati Florists' Society.

PHILADELPHIA, PA.—A fine show of sweet peas was held in Horticultural Hall, June 30. There was a great variety of fine flowers, the Spencer types predominating. The judges of the exhibits were Wm. Graham, A. E. Wohler and Harry A. Bunyard, and the show was held under the auspices of the Pennsylvania Horticultural Society. John W. Pepper, Edward V. Morrell, W. W. Frazier, Mrs. F. C. Penfield, Countess Eulalie, Craig Lipincott, C. B. Newbold and Geo. H. McFadden were the principal prizewinners.

## Carnations

**F. DORNER & SONS CO.**  
La Fayette, Ind.

Lexington, Ky.

Business is practically at a standstill and in fact there is nothing to report except that about one-half of the flowers coming in are carried to the dump barrels. Extremely hot weather is now upon us and is telling on cut flowers. Roses and carnations are getting small and in fact there is very little choice stock to be had. Longiflorum lilies are good and plentiful but the demand is slow. Some of the growers have been shipping them to out-of-town markets of late. Outdoor grown sweet peas are practically a failure in this section this year owing to the heavy rains. Some very good flowers are still being cut from the indoor grown stock. Gladioli are of fairly good quality. Asters have made their appearance and they are of good quality this year. Snapdragons are plentiful. There is a fair demand for green goods of all kinds and an ample supply. Flower beds in the cemeteries and other places are looking bad this summer owing to so much heavy rain.

### NOTES.

Mr. Cole, formerly rose and carnation grower for the Michler Bros. Co. on East Maxwell street, has accepted a position in Sisterville, W. Va. Mr. Cole is a good grower and we wish him much success in his new field.

Anderson & White on Georgetown street have bought the material for a conservatory and work will be begun in a few days.

Lucien Le Clere returned from Paris last week with a good string of fish. Lucien says fishing is fine in that section.

It is reported that Kelley & Curren, Clifton Heights, will erect a house 150 feet long for roses this summer.

J. Ferdinand Keller has become quite a baseball fan and can always be found rooting for the home team.

L. L. C.

Wichita, Kans.

Hot and dry comes pretty near describing the situation for this vicinity. No rain of consequence has fallen for about a month. Outdoor stock is at a standstill except where the hose is used. Carnations are standing it well so far but asters and other summer flowering stock show the effect of the dry weather in quality of stock produced and a prospect that later crops will be much shortened up. Business is at the summer dull mark, funeral work comprising the bulk of it. The growers will now find time to repair the roofs damaged by the heavy hail of May 1. Chrysanthemums are all planted and they are looking well so far.

# WE TAKE THE LEAD

In what? What a foolish question! Don't you know? Didn't you hear of **GODFREY ASCHMANN**, the great **Araucaria Importer, Grower and Shipper?** These so well favored, everlasting green decorative plants, the **Araucaria Excelsa, Robusta Compacta** and **Excelsa Glaucia**, are in favor more than ever this year.

This is our 25th anniversary since we began importing Araucarias. Watch! See us grow! Beginning 25 years ago with 100, our this year's (1910) importation is **10,000**, and more are coming this fall after I have made my selection of the choicest of the choice on my trip to Belgium; the growing district of the world in Araucarias and Azaleas. The trade is well informed that for many years past I go personally to Belgium to protect and select for my customers the best of **Araucarias, Azaleas, Palms, etc.**, that cash can buy there. Empty houses won't pay. Now is the time to fill your empty houses with something to grow into money while you are asleep.

Remember, it is the wide awake man that is not afraid to invest a dollar that makes the money. Please look at our special low prices for superior stock.

**Araucaria Excelsa**, raised from top cuttings, no seedlings. Plants, 5-5½-6-7 in. pots, 12-15 18-20-25-30 in. high, 3-4 5-6 tiers, 2-3-4-5 years old, 35c. 50c. 60c. 75c. \$1.00, \$1.25 to \$1.50 each.  
**Robusta Compacta, Excelsa Glaucia**, 6 in. pots, \$1.00 to \$1.25 each.  
**Kentia Forsteriana**, in fine shape, 6-in. pots, 30-35-40 45 in. high, 4-5-6 years old, 75c. \$1.00, \$1.25, \$1.50, \$2.00 to \$2.50 each.

**Kentia Belmoreana**, 25 30-35-40 in. high 5-5½-6-7 in. pots, 5-6-7 years old, 50c. 75c. \$1.00, \$1.25, \$1.50 to \$2.00 each.

**Kentia Belmoreana**, 2½ to 3 in., 10c each.

**Standard Bay Trees**, 1-foot tubs, 7 ft. high from bottom up, \$8 (0 per pair).

**Sago Palms**, ready July 15, 6-7-8 in. pots, from 5 to 20 leaves 10c per leaf.

**Cocos Weddelliana**, 3 in. pots, 18c to 20c.

**Nephrolepis Whitmanii** Boston and Scottii, 4-in., 20c; Scholzei 4 in., 25c; 6-in., 40c.

**6,000 Ferns** now ready, 5, 5½ to 6 in. pots, 35c, 40c and 50c.

**Ferns for Dishes**, big assortment, 2½-in. pots, at \$3.00 per 100.

**Begonia Gloire de Lorraine**, deep pink, 4-in., 25c.

**Begonia Lonsdale**, pale pink, 4-in., only 25c.

**Begonia Vernon**, pink and red, 4-in., 7c.

**Begonia Flambeau**, 6-in., 25c.

**Fuchsias**, in bloom, assorted, 4-in., \$7.00 per 100.

**Cannas**, Richard Wallace (best of the red), J. D. Eisele (also one of the new best reds), large 4-in., \$7.00 per 100.

**Scarlet Sage**, Clara Bedman, 4-in., 7c.

**Double Petunias**, 4-in., in bloom (red or pink), 7c.

**Coleus**, Golden Bedder, Queen Victoria, 2½-in. 3c.

**Summer Chrysanthemums** or Paris Daisies, 2½-in. pots, 33c.

**English Ivy**, 3 in., 5c.

**Primula Obconica**, best strain, 4 in., 10c; 5-in., in bloom, 15c.

**Cosmos**, separate colors, 2½-in., \$3.00 per 100.

We have an unsurpassed strain of **Solanum Multiflorum** (Jerusalem Cherries). Can offer only a limited quantity. 2½-in. pots, \$5.00 per 1000.

Cash with order, please.

All plants must travel at purchaser's risk.

# Vaughan's Giant Pansies

**10 per cent special CASH DISCOUNT.** On orders over \$2 for Flower Seeds if cash is enclosed, **10 per cent.** The discount does not apply to Asparagus Seed. Cash discount on this is 2 per cent.

## VAUGHAN'S "ELITE PANSIES."

This is not a complete mixture like our International; it does not contain any pure white, yellow or any self colors. It is comprised of the cream of four Pansy specialists' choicest and most expensive mixtures. Trade pkt., 50c, ½ oz., \$1.00.

## VAUGHAN'S PREMIUM PANSY MIXTURE.

Embraces all the varieties of the Fancy German Sorts. We have sold this mixture for the past seventeen years, and it has given general satisfaction. Per pkt. 25c; ½ oz., 75c; ½ oz., \$2.50; oz., \$5.00.

## IMPROVED GERMAN MIXTURE.

This is a mixture of three strains from different German growers, and is made up mostly of separate colors, with a sufficiently large percentage of white and yellow. Per large pkt., 10c; ½ oz., 20c; ¼ oz., 30c; oz., \$1.00.

## VAUGHAN'S INTERNATIONAL PANSIES.

Vaughan's International Pansy Mixture was first prepared and offered by us in 1889. We import from all the best European sources, and personally inspected the fields of French and German specialists of their finest strains. Each year has added to the quality of its flowers, the variety of its colors. We buy every year novelties of known merit to improve the mixture. This is the reason it is always complete, always the latest and always the best mixture AS WE BELIEVE. We add to all the Pansy Mixtures, which we now buy more than fifty per cent of choicest named kinds obtainable, each in rightful proportion. We thus know what it will produce. This is one of the SPECIALTIES which has established and held the reputation of Vaughan's Flower Seeds and this is one which we maintain most carefully, not alone as to quality, but in vitality and germination. You are beginning right in Pansy growing when you start with Vaughan's International Mixture. Trade pkt., 50c; ½ oz., \$1.50; ½ oz., \$5.00; oz., \$10.00.

## VAUGHAN'S CUT FLOWER MIXTURE.

This mixture is put up by ourselves and contains mostly light colored sorts. We have sold this mixture for several seasons to some of our Chicago cut flower growers, who have realized big returns from the sale of the flowers. Pansies are as easily grown as violets, require less care and bring better returns. Trade pkt., 50c; ½ oz., \$1.00; ¼ oz., \$2.00; oz., \$8.00.

## VAUGHAN'S "GIANT PANSY MIXTURE."

Embraces besides all the separate shades and colors, five special strains not listed elsewhere, and which can only be had in this and our International mixture. This mixture includes the richest reds, coppers and bronzes, together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain. Trade pkt., 25c; ½ oz., 60c; oz., \$4.00; ¼ lb., \$14.00.

Our list of "Seeds for Summer Sowing" now ready; if you have not received a copy please write for same.

Medford, Mass.

Mrs. E. M. Gill celebrated her eightieth birthday June 28 and throughout the day the charming Gill homestead with its rose gardens and greenhouses bore a most hospitable air and callers were numerous. From 2 to 5 o'clock in the afternoon the venerable hostess gave a delightful at home to 125 of her friends, who came from far and near to offer congratulations, tender birthday remembrances, and wish her many more years of successful activity and happiness. The rooms and halls of the house were beautifully decorated.

The affair was pleasurably informal. A merry exchange of social greetings, a ramble among the roses of the garden where Mrs. Gill stood to have her picture snapped by Robert Cameron of the Botanical Gardens of Harvard University, and a delightful hour over the refreshments made the afternoon one long to be remembered.

A pleasant feature was the presentation to Mrs. Gill of a silver purse containing 80 gold dollars by Secretary William P. Rich, on behalf of the Massachusetts Horticultural Society. Accompanying the purse was a letter to the effect that "at a meeting of the trustees of the Massachusetts Horticultural Society, held June 14, it was unanimously voted that you be made a life member, with remission of usual dues, in recognition of your eightieth birthday and also of your 45 years of interested service in the work of the society."

**J. D. THOMPSON CARNATION CO.,**  
**JOLIET, ILL.**

Albany, N. Y.

As many members of the Florists' Club as could attend were present at the July meeting which was held at the home of the president, Fred Goldring, Font Grove, a small station on the Delaware & Hudson railroad a short distance southwest of the city. The meeting was held on the evening of July 7. Many went out on an early train and took advantage of the opportunity to inspect the greenhouses and grounds which at this season of the year are attractive. F. A. Danker, as chairman of the flower show committee, submitted his final report on the show held last November in the state armory. The receipts were \$1791.56; expenditures, \$1774.50; balance, \$17.06. Tickets to the amount of \$42.75 are still out but reports on many of these are expected later. As the club did a little better than to clear expenses on the show the members feel encouraged to go ahead with the second one.

An encouraging report was made on the distribution of flowers at the high school commencement. The plan to have a competent man at the hall to attend to the distribution of the pieces worked to the satisfaction of the florists and the authorities of the high school who wondered why the plan was not put into vogue long ago. An encouraging report was also received from the committee interested in early closing during the summer season and the outlook is that all will be in line this year. Shops will be closed at 6 p. m. and on Saturday afternoons until Labor day. Henry Schrade, carnation grower of Saratoga Springs, was unanimously elected a member of the club. Those proposed for membership were: John Ralph, Saratoga; Walter Mott, Newburgh; Thomas Keleher, Marvin P. Sheflin, and A. B. Reynolds. The resignation of Louis Menand, Sr., as treasurer of the club and of the flower show committee was accepted with regret. Mr. Menand explained that owing to ill health he could no

## The Kenilworth Strain of Giant PANSY SEED

**Must Not Be Compared  
With the Flimsy  
Trimardeau**

It is much larger and of good substance; the immense flowers, of 3½ to 4 inches, are of perfect form, and every tint and shade is produced in striking combinations and endless variations of beautiful colors and markings. It is the result of years of selections.

The Stock Plants are selected from many thousands of plants grown for market. It is rich with shades of brown, bronze, red, mahogany, and many others too numerous to mention. Light, Medium or Dark Mixtures.

### 1910 SEEDS NOW READY

### NOTES.

Henkes Bros., Newtonville, are building an addition 50x58 feet to their King construction house put up last summer.

H. G. Eyres and family have taken up their residence for the summer at Island Harbor, Hague, Lake George.

William Hannell, Watervliet, is building an addition 30x100 feet for carnations.

Visitor: Walter Mott of the Yuess Gardens Co., Newburgh.

R. D.

longer attend to the duties. During the period of the show last year Mr. Menand's services were invaluable and the club feels the need of his work this year. Patrick Hyde was elected to succeed him and a vote of thanks was extended to Mr. Menand. Following the meeting refreshments were served and a good social time had with songs by J. J. McCarthy, who has entertained the members a number of times with his clever work. The August meeting will be held at the establishment of F. A. Danker, Central avenue, on the evening of August 4.

## King Iron Frame Greenhouses

"Ask the Man Who Has One."

Robert Scott &amp; Son, who have a range of King Iron Frame Houses, write as follows:

SHARON HILL, PA. Feb. 7, 1910.

Gentlemen:—

I am very much pleased with the five houses of the King Iron Frame Construction that we put up last fall. They are strong and light and we think so well of them that when we build again that is the construction we shall use. We are planting this section in concrete solid beds and if you are near Philadelphia in May and you can call on us, we think you will tell us that it is a good advertisement for your Iron Frame Construction in this part of the country.

Yours very truly,

ROBERT SCOTT & SON. (Signed)  
Alexander B. Scott.

Messrs. Scott &amp; Son have recently placed with us an order for another large addition to their plant.

Send for Bulletin No. 35 which describes  
The King Iron Frame Construction.  
KING CONSTRUCTION CO., North Tonawanda, N. Y.

## Have You Ever—

Talked with a brother florist who uses Morehead Return Steam Traps?  
If not, do so at first opportunity and be convinced that you must install one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

MOREHEAD MFG. CO., Department "N" Detroit, Mich.

## "GREENHOUSE MATERIAL"

Primroses, Chinese, 2-in., \$2 per 100. Byer Bros., Chambersburg, Pa.

### POINSETTIAS.

Poinsettias, 3-in., \$5 per 100. C. Eisele, 11th and Westmoreland Sts., Philadelphia.

Poinsettias, 2-in., \$5 per 100. D. U. Augspurger & Sons Co., Peoria, Ill.

Poinsettias, 2½-in., \$5 per 100; \$45 per 1,000. Frank Oechslein, 4911 Quincy St., Chicago.

### PRIVET.

Privet, California, 1 and 2-year plants. Chas. Black, Hightstown, N. J.

### RHODODENDRONS.

Rhododendrons. Jacs Smits, Ltd., Naarden, Holland.

### RESURRECTION PLANTS.

Resurrection Plants.—We are strictly headquarters for the Mexican resurrection plant, and ship all over the world. Dormant plants, guaranteed to "resurrect," \$2 per 100, delivered; \$10 per 1,000; 5,000 at \$8.50; 10,000 at \$8; 1,000 weigh about 45 pounds. Also cacti. The Francis E. Lester Company, Dept. 7, Mesilla Park, N. M.

### ROSES.

ROSES, 2-in., on own roots, Wellesley, Frances E. Willard, La Detroit, Ben R. Cant, Burbank, M. Nell, Souv. de P. Notting, Apricot, Marie Lambert, Mrs. De Graw, Clothilde Souper, \$2.50 per 100; \$22 per 1,000. Veilchenblau (violet blue) novelty, heavy 2-year stock, 90c; \$9 per doz. Wagner Park Conservatories, Sidney, O.

Roses, Crimson Rambler, 7-8 in., 75c to \$1.50 each. Dorothy Perkins, 5½ and 6-in., 35c to 50c. Godfrey Aschmann, 1012 W. Ontario St., Philadelphia.

Roses. For varieties and prices see advertisement on front cover page. Vaughan's Seed Store, P. O. Drawer V, Chicago.

### SPIREAS.

Spireas. J. Smits, Ltd., Naarden, Holland.

### STEVIA.

Stevia, R. C., 75c per 100; \$6 per 1,000. Eyer Bros., Chambersburg, Pa.

### STOVE PLANTS.

Stove plants and crotons. Finest collection. Julius Roehrs Co., Rutherford, N. J.

### SWAINSONAS.

Swainsona alba, 3-in., \$3 per 100. R. Vincent, Jr., & Sons Co., White Marsh, Md.

### VEGETABLE PLANTS.

Cabbage in any quantity; Sure Head, Premium, Flat Dutch, Autumn King and Danish Ball Head, \$1 per 1,000; \$8 per 10,000. These are in excellent shape, every one a plant. I can ship by Adams, Wells-Fargo, United States, and Southern Express. Elmer Rawlings, Wholesale Grower, Olean, N. Y.

Vegetable plants: Cabbage, All Head, Succession, Second Early, Early Summer, Flat Dutch, Surehead, Danish Round and Ballhead, 20c per 100; \$1 per 1,000. Celery: White Plume, Golden Self Blanching, Giant Pascal, Golden Heart, Boston Market, 20c per 100; \$1 per 1,000. R. Vincent, Jr., & Sons Co., White Marsh, Md.

Vegetable plants, cabbage, celery, peppers, sweet potatoes, Brussels sprouts and celeriac, \$1 per 1,000; 5,000, \$4; 10,000, \$7.50. J. C. Schmidt, Bristol, Pa.

Cabbage plants, Wakefield, Early Summer, All Head, All Seasons and Hollander, \$1 per 1,000. J. L. Johnson, De Kalb, Ill.

### VINCAS.

Vinca minor, the hardy vinca for cemetery planting and under trees, where grass will not grow; well rooted layers, \$1.50 per 100; \$10 per 1,000. E. Y. Teas, Centerville, Ind.

### BOILERS.

Gem City Return Tubular Firebox boilers. The Gem City Boiler Co., Dayton, O.

### BUILDING MATERIAL.

Building material, hotbed sash, cypress, unglazed 95c each; in doz. lots, 90c; glazed, \$1.65 each; doz. lots, \$1.60. Pine sash, unglazed, 90c; doz. lots, 85c; glazed, \$1.60; doz. lots, \$1.55 each. Building hardware, wire and wire fencing, bolts, hatchets, hammers, etc. Chicago House Wrecking Co., 35th and Iron Sts., Chicago.

Building material, cypress sash bars, Tennessee red cedar posts, pecky cypress benches, hotbed sash and frames, ventilating apparatus, pipe fittings and all supplies needed in new or reconstruction work. Foley Mfg. Co., Western Ave., and 26th St., Chicago.

Building material. Cypress is far more durable than pine. Cypress sash bars up to 32 feet or longer. Greenhouse and other building material. Men furnished to superintend erection when desired. A. T. Stearns Lumber Co., Neponset, Boston, Mass.

Building material, cypress sash bars, greenhouse material of any description. Write for catalogue. John C. Moninger Co., 902 Blackhawk St., Chicago.

Building material of all descriptions for all cypress semi-iron frame or truss houses. Hotbed sash and frames. Lord & Burnham Co., 1133 Broadway, New York.

Building material, greenhouse material and hotbed sash of Louisiana cypress and Washington red cedar. A. Deltsch Co., 2642 Sheffield Ave., Chicago.

Building material, Louisiana cypress, pecky cypress, hotbed sash. S. Jacobs & Sons, 1357 Flushing Ave., Brooklyn, N. Y.

Building material, cold frames, hotbed sash. Hitchings & Co., 1170 Broadway, N. Y.

### GLAZING POINTS.

Glazing points: See the point? Hold glass firmly. Peerless glazing points are the best. No rights or lefts. Box of 1,000 points, 75c, postpaid. Henry A. Dreer, 714 Chestnut St., Philadelphia.

Siebert's zinc never-rust glazing points, 2 sizes,  $\frac{3}{8}$  and  $\frac{1}{2}$ , 40c per lb.; 16c extra by mail; 7 lbs., \$2.50; 15 lbs., \$5 by express. Randolph & McClements, Baum and Beatty Sts., Pittsburg, Pa.

Glazing points, Lord & Burnham special glazing nails (points). Lord & Burnham Co., 1133 Broadway, N. Y.

### GREENHOUSE CONSTRUCTION.

Greenhouse construction of all kinds and conservatories. Estimates and catalogues on request. The Foley Mfg. Co., Western Ave. and 26th St., Chicago.

Greenhouse construction, builders of every type of greenhouse, the most modern designs. Hitchings & Co., 1170 Broadway, New York.

Greenhouse construction, cypress roof material and all greenhouse fittings. Plans and sketches submitted on request. John C. Moninger Co., 902 Blackhawk, Chicago.

Greenhouse construction, semi-iron greenhouses, new truss houses, iron frame houses. Lord & Burnham Co., 1133 Broadway, N. Y.

Greenhouse construction, builders of modern greenhouses. Myers & Co., 1122 Betz Bldg., Philadelphia.

Greenhouse construction and equipment. King Construction Co., N. Tonawanda, N. Y.

### GUTTERS.

Gutters, Jennings' Improved iron gutters. Diller, Caskey & Keen, 6th and Berk Sts., Philadelphia.

Gutters, cast-iron. Lord & Burnham Improved V-shaped gutter with drip gutter attachment. Lord & Burnham Co., 1133 Broadway, N. Y.

Gutters, Garland's. A gutter with a reputation. Geo. M. Garland Co., Des Plaines, Ill.

### INSECTICIDES.

The Fumigating Kind Tobacco Powder. \$3 per bag 100 lbs. The H. A. Stoothoff Co., Mount Vernon, N. Y.

Insecticides, Carmen's Antipest Insecticide and fungicide, \$1.50 per gal. Perfection Chem. Co., Flushing, N. Y.

Aphine, \$1 per qt.; \$2.50 per gal. Geo. E. Talmage, Inc., Madison, N. J.

### MISCELLANEOUS.

Meyer green silkline, \$1.25 per lb., 8 spools to lb. Meyer violet thread for violets, \$1.25 per doz. spools of 500 yards each. John C. Meyer Co., 1449 Middlesex St., Lowell, Mass.

Cypress for greenhouse construction, benches, etc. Baker-Wakefield Cypress Co., Ltd., Plattenville, La.

Mexican jumping beans, 60c per 100; \$5 per 1,000. J. A. McDowell, Apartado 167, Mexico City, Mex.

Richmond carnation supports, rose and mum stakes. Eagle Machine Works, Richmond, Ind.

Tile benches and tile bottoms. The Camp Conduit Co., Cleveland, O.

The Mastin Automatic Whitewash and Spraying Machine. J. G. Mastin & Co., 3124 W. Lake St., Chicago.

Plant bed cloth, waterproof sheeting, hay caps, etc. Henry Derby, 123 F. Chambers St., N. Y.

Pulverized Sheep Manure. Sheep's Head Brand. Natural Guano Co., Aurora, Ill.

Pillsbury's Carnation Staple, 50c per 1,000, postpaid. I. L. Pillsbury, Galesburg, Ill.

### PIPE.

Pipe, iron fittings, etc., galvanized iron sash hinges, screw eyes, screw hooks, U-bolts, galvanized iron buckles and wires. Fittings for purlin and ridge supports. Foley Mfg. Co., Western and 26th, Chicago.

Pipes and fittings, cast iron and wrought pipe, valves, elbows, pipe hooks, automatic air headers, etc. Lord & Burnham Co., 1133 Broadway, New York.

Iron fittings, patent iron bench fittings and roof supports. Diller, Caskey & Keen, 6th and Berk Sts., Philadelphia.

Pipe and fittings. S. Jacobs & Sons, 1357 Flushing Ave., Brooklyn, N. Y.

Pipe, valve fittings. Chicago House Wrecking Co., 35th and Iron Sts., Chicago.

### POTS, PANS, ETC.

"NUFF SED." Best red pots are made by Geo. E. Feustel, Fairport, Iowa.

Pots, before buying write for prices. Geo. Keller & Sons, 2614-22 Herndon St., Chicago.

Pots. Florist red. Peters & Reed Pottery Co., Zanesville, O.

Pots. Syracuse red. Syracuse Pottery Co., Syracuse, N. Y.

Pots, red standard. Paducah Pottery Co., Paducah, Ky.

Pots. Standard, all sizes. A. F. Kohr, 2934-38 N. Leavitt St., Chicago.

The Red Pot. C. C. Pollworth Co. All roads connect with Milwaukee.

### RAFFIA.

Raffia, bale lots. Vaughan's Seed Store, P. O. Drawer V, Chicago.

### STAKES.

Cane Stakes. Standard grade 6 to 8 feet, per 100, 85c; 500 for \$3; \$5.50 for 1,000. Pipe stems about 6 feet, per 100, 60c; per 1,000, \$5. Vaughan's Seed Store, Chicago.

### STEAM TRAPS.

Steam traps, the Standard return steam trap has no equal for its simplicity of working. E. Hippard, Youngstown, O.

Morehead Return Steam Traps. Morehead Mfg. Co., 1047 Grand River Ave., Detroit.

Detroit return traps. American Blower Co., Dept. A. F., Detroit, Mich.

### Air Nitrate Fertilizers.

Consul-General Frank H. Mason, of Paris, writing of the production of nitrogen from the atmosphere, and its use for economic purposes, especially as a fertilizer in agriculture, says that as thus far developed in Europe it is a direct sequel to the manufacture of calcium carbide by the application of electric heat to lime and carbon. He also says:

"When this process was discovered some years ago it was assumed that acetylene gas, generated from calcium carbide, would largely supplant coal gas and revolutionize the existing system of artificial lighting. The first essential requisite for carbide production was abundant and cheap electric current, and extensive plants were erected along water courses of Europe and preparations made to supply a large and steadily increasing demand. But it was soon found that acetylene gas was a difficult and, under certain conditions, a dangerous element to manage; its use became restricted to certain locations and conditions, and experience proved that the combined carbide factories had a capacity of about 100,000 tons in excess of the normal demand for that material.

"About this time Frank and Caro, two German chemists, invented a process through which, by combining nitrogen gas with calcium carbide at a temperature of 1,000° C., they could produce a combination of lime, carbon and nitrogen—in other words, a synthetic nitrate of lime—to which they gave the name of cyanamid of calcium, now commonly known as cyanamid, which contains from 15 to 20 per cent of nitrogen, 60 per cent of lime, and has qualities as a fertilizer similar to sodium nitrate, or Chilean saltpeter. This

process was patented in all countries and became the property of a corporate company, with headquarters at Rome and known as 'La Societe Italiana per la Fabrication de Produits Azotati.' The calcium carbide therefore was ready, the process for converting it into cyanamid by combination with nitrogen was perfected, and it only remained to provide an adequate supply of atmospheric nitrogen at a moderate cost. This requirement was met by a process invented by Dr. Carl von Linde, of Munich, which was patented in both France and the United States. By this process atmospheric air, having been first liquefied by compression, is subjected, by subsequent expansion under pressure, to a process of fractional distillation, by which the nitrogen is separated, leaving as a by-product oxygen of 50 to 60 per cent purity, which can be used by burning in the electric arc (sparking) for the manufacture of nitrates and nitric acid. [A copy of the French patent for the Linde process is on file in the bureau of manufactures.]

"The cycle was now complete, and it is through the combination of these two processes—the Linde method for recovering atmospheric nitrogen and Frank-Caro method of combining nitrogen with calcium carbide for the production of cyanamid of calcium—

that European progress hopes to provide for the future an adequate supply of nitrate fertilizer for agricultural purposes. Under licenses granted by the central company at Rome there are now established and in operation four or five plants for the production of cyanamid in Germany, one in Italy, one at Budapest, one or more in Norway, one in the United States—the American Cyanamid Co., with offices at New York, and works at Niagara Falls—and one in France, the Societe des Produits Azotes, with offices at

**E. H. HUNT,** 76-78 Wabash Ave., Chicago

Paris and large plants at Notre Dame de Briancon, in the Department of Savoie, France, and at Martigny, Switzerland. The establishment at Notre Dame de Briancon is the only one of its kind in France. It is elaborately described, with illustrations of buildings and machinery, and with complete scientific analysis of the entire process, in the Genie Civil, for August, 1909 [a copy of which is on file in the bureau of manufactures].

"This company has a capacity at Briancon of 120 cubic meters of nitrogen gas per hour, and in 1909 produced about 900 tons of cyanamid. This year it has turned out during the first three months 1,000 tons, and expects to produce during the year at its two plants in France and Switzerland from 9,000 to 10,000 tons. Even at this increased rate of production it is unable to supply the rapidly growing demand, as the use of nitrate fertilizers is steadily expanding in France. The German companies produced during the year ended May 30, 1909, 3,500 tons of cyanamid, and since that date 3,500 tons. Their capacity is being steadily increased. The largest plant thus far in Europe is that of the Northwestern Cyanamid Co. at Adda, Norway, which produces 500 cubic meters of nitrogen gas per hour, and it is reported that the capacity of that establishment is to be doubled. All accounts agree that the demand for cyanamid everywhere exceeds the available supply, and most of the manufacturing companies are planning greatly to increase their productive capacity.

"Elaborate experiments have been made with cyanamid in competition with sodium nitrate, sulphate of ammonia, and other chemical fertilizers for stimulating the growth of cereals, sugar beets, potatoes, and other crops. These tests have been made at various places in France, England and Germany. The reports of these experiments are voluminous and in some minor details conflicting, but they are practically unanimous in according to cyanamid the essential qualities of a high-class fertilizer. It can be readily produced with a nitrogen content of 18 to 20 per cent combined with about 60 per cent of lime. It is more stable than Chilean nitrate, dissolves slowly in contact with wet soil, and yields its nitrogen gradually as it is required by the growing plants. Some of its most beneficial effects have been noted in soils deficient in lime, and

where it was applied at the time of or a few days previous to the planting of the seed.

"The Agricultural Syndicate of the Department of Vaucluse has petitioned the Central Union of Agricultural Syndicates in Paris in favor of erecting on the river Durance, near Sisteron, a plant for the manufacture of artificial nitrates on their own account. This is the first move of the farmers of France to secure an increased supply of the new fertilizer at cost of production and independent of the market as controlled by manufacturing companies. Cyanamid is sold in the form of a coarse, dark-colored powder, which is distributed on the land by a two-wheeled planter or drilling machine drawn by one horse. The quantity varies with different crops and soils from 200 to 250 kilos per hectare, or about 200 pounds per acre. Nitrogen

gas is also used for several minor purposes among which are: (1) In the manufacture of metallic filaments for incandescent lamps, nitrogen is used in heating the filaments where air containing oxygen would oxidize and destroy certain elements in the metal; (2) for manipulating certain liquids which would deteriorate or become explosive by exposure to the air. Nitrogen gas compressed to a pressure of 300 pounds is sold in Paris at prices ranging from 38 to 48 cents per cubic meter."—Consular Trade Reports.

ST. JOSEPH, Mo.—John. W. H. Krumm, 45 years old and until a few years ago associated with his brothers in the Krumm Bros. Floral Co., died July 1. He was a native of Leavenworth, Kans., and had been employed with his brothers in the florist business about 25 years.

There is not a house built today, that has the extreme lightness, beauty and practicalness of our U-Bar Curved Eave.

TRADE GOOD.

So far business has not shown any decline during the vacation time and all report a brisk trade. The bedding season was much prolonged and owing to the late frosts many tender plants had to be re-planted or whole beds changed, which cleared out all the surplus usually left over other years. Never before have retailers handled so many wedding decorations as this last month. The supply of flowers is up to the demand but of poor quality; outdoor roses are plentiful but short stemmed and with poor foliage. The peony crop was the worst in years; the frost considerably crippled the buds and the few flowers that did open were over in a couple of days. We are passing through a spell of tropical heat with absence of rain, consequently all plants which can not be watered suffer badly.

### NOTES.

At the meeting of the Gardeners' and Florists' Club last Monday there was a large attendance to hear A. Walker's paper on "Time Required to Mature Various Crops at Different Seasons Under Glass." Mr. Walker gave exact dates and figures on tomatoes, lettuce and radishes, which provoked a lively discussion. The annual picnic of the club will be held July 20 at Highgate Springs, Vt.; a long list of events will be run off and the prizes will be numerous and costly, and we all hope for a large attendance.

Hall & Robinson are busy re-planting roses and are still cutting some very good carnations out of the big house. Mr. Hall stated that they are unable to grow all the ferns for their retail trade and that there would be a good opening for a fern grower to start in business.

McKenna's chrysanthemums are a healthy looking lot; a great number of varieties are grown here, also a couple of benches of singles. They are very successful here, potting them up when nearly in bloom and selling in pots.

The sympathy of the trade is extended to S. S. Bain who lost, through typhoid, his oldest son, Lorne, aged 29.

LUCK.

## The Superior Standard

RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
 $\frac{3}{4}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers — names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market

## THE ALLIED TRADES

### The New Hammond Paint Works.

A most interesting function at Fish-kill on Hudson, N. Y., on June 29 was the laying of the corner stone of the new factory for Benjamin Hammond's paint and slug shot works. There were no special ceremonies but the stone, of polished blue granite and inscribed on one side, "Hammond's Corner" and on the other, "1910," was placed on the corner of the tower building at the intersection of Beekman and Ferry streets. The metal box in the stone contains a lot of manuscripts, pictures, and papers that will be of great interest and historical value in future years. Mr. Hammond was present and personally deposited the articles in the corner stone. The new building will be a handsome and substantial one, a large tower being a feature. The main entrance will be on the corner and the building will be 40x80 feet.

### Tile Benches.

The Camp Conduit Co., of Cleveland, O., has spent considerable time and study on its hollow tile benches for greenhouses, improving them and bringing them up to the requirements of present day florists. These benches are constructed of hollow tile castings of burnt clay and have the dual merits of low cost and extreme durability. Added to these they can be taken down and rebuilt in other places with the minimum of trouble, are light for transit, clean and very satisfactory as a medium for plant or cut flower growing.

The Standard greenhouse bench can be made any length or width. The floor tile are supplied entire or with scoring on the sides for splitting. The height of the bench is 20 inches to the top of the floor tile when erected on the posts but the latter can be supplied longer or shorter at slight additional cost. Clamps of malleable iron are provided to tie the bench together and suitable supports for heating pipes are also provided. In the

The Chrysanthemum Society of America, in conjunction with the Morris County Gardeners and Florists' Society, has issued the preliminary schedule for its fifteenth annual flower show, which will be held on the grounds of the Whippany River club on November 2, 3 and 4, offering \$2,500 in prizes. A grand sweepstakes prize silver cup, valued at \$150, is offered by the Morris County Gardeners and Florists' Society, the conditions being as follows: A cash prize of \$20 is offered to any winning member of any regularly organized floricultural or horticultural society, exhibiting the best 18 blooms in as many varieties, to be shown in single vases, stems not to exceed 12 inches. The first prize exhibits of each society thus competing will be judged for the prize cup. Eighty-one prizes are offered for chrysanthemums, the flowers to be cut, the largest prize, \$100, being offered for 60 flowers in 20 varieties to be shown in vases. Prizes are also offered for American Beauty, Bride, Bridesmaid, My Maryland, Killarney and Richmond roses.

In the carnation classes a special prize is being offered by Charles B. Gee, of Madison, for a vase of 18 blooms for a silver cup, or \$25 in cash. There will be four classes in violets and three in greenhouse grapes, and also an exhibition of orchids, both growing and cut, the latter to be arranged as decorations on a round table. Valuable prizes are also offered for

## BEAUTIFUL ROCHESTER THE CONVENTION CITY

The twenty-sixth annual convention of the Society of American Florists will be held August 16-19 at Rochester, N. Y., one of the most beautiful and progressive cities in America. The city, with a population of 210,000, is quite modern, having good streets and excellent car service. Erie canal and the picturesque Genesee river run through the city and the cool breezes of Lake Ontario and Irondequoit Bay insure a delightful climate all the year round. Rochester is a city of homes and the residence sections are well adorned with handsome trees and shrubs. While the city proper affords a comparatively level surface, much of the adjoining territory is of irregular character with excellent drives by well wooded ravines and precipitous glacial banks, grim, naked and vexingly uninforming to the novice in geology. There are many charming summer resorts by the lake and the river, Rochester being famous as a yachting center, with stately sailing craft that glide to many a famous victory, and motor boats that skim as phantoms over the moonlit waters, but throb and pant like things of real life.

But the glory of Rochester is her parks of which Calvin C. Lanev is superintendent and engineer and John Dunbar assistant superintendent and practical manager of the entire system covering some 1,500 acres. Highland park, containing 115 acres, has been the object of Mr. Dunbar's devoted attention and he has established therein an excellent pinetum with 230 species and varieties and one of the best collections of trees and shrubs in America. The collection of lilacs (over 200 species and varieties) in this park is said to be the most complete extant and that of azaleas and rhododendrons is also very large. American hawthorns are well represented here, and the collection of peonies is very extensive. The members of each genus are grouped together so far as practicable, and this arrangement is found very convenient for study. The trees and shrubs in all the parks and throughout the city show that they have been

handled with rare skill by competent men and the citizens are justly proud of them. Highland park alone is well worth the journey to Rochester to everyone in the trade, and a trip over the system with Mr. Dunbar is a liberal education on ornamental trees and shrubs and their cultural needs.

The principal private gardens of Rochester are those of Geo. Eastman (Gardener Wm. T. Pirie), Mrs. W. S. Kimball (Gardener Colin Ogston), Mrs. F. F. Thompson (Gardener Robt. Ballantine) and Warham Whitney (Gardener Theo. Strezeski).

Industrial Rochester affords many interesting features. Here, for example, may be found one of the largest and most complete Masonic temples and the largest Masonic lodge (Genesee Falls No. 507) in the world; largest preserving establishment in the world; while it is a large producer of clothing, boots, shoes and flour, it is the first city in the production of photographic supplies and a large lithographing business is done by Rochester firms, much of it being special work for seedsmen and nurserymen. Among the largest of these lithographic firms are the Stecher Lithographing Co., of which the genial F. A. Stecher is the head, Vredenburg & Co., Rochester Lithographing Co., and Karle Lithographic Co., all specializing in catalogue work for florists, seedsmen and nurserymen.

For many years Rochester and the nearby city of Geneva (distance 45 miles) have been the headquarters of the nursery business, one of the pioneers in the industry being the late Patrick Barry, of the firm of Ellwanger & Barry. Among other representative firms we may also mention Brown Bros. Co., Charlton Nursery Co., Glen Bros., Woodlawn Nurseries, Grover Nursery Co., Fairview Nurseries, Standard Nursery Co., Green's Nursery Co., and McGlennon & Kirby.

Leading Geneva nurseries include W. & T. Smith Co., M. H. Harmon Co., Chase Nurseries, Geo. Trautman, Jr., Sears, Henry & Co., A. J. McGraw, W.

F. Cobb & Co., Van Dusen Nurseries and Ontario Nursery Co.

The Jackson & Perkins nurseries at Newark, N. Y., are close to the convention city, about 30 miles out.

The late James Vick immortalized Rochester as a seed trade center, the firm he established being favorably known throughout the horticultural world. James Vick's Sons (Chas. H. Vick, president) are perhaps best known to florists as aster specialists, and maintain extensive seed and trial grounds within easy reach of the convention hall. M. Cushman & Co. do an extensive business in box seeds, and Mandeville & King have a high reputation in this line of trade.

The home seed grounds of the well known firm of Jerome B. Rice Seed Co., Cambridge, N. Y., are not far from here, some 250 miles east. Port Hope, Ont., one of the more important Canadian pea districts, is located directly across Lake Ontario, some 60 miles away. Irondequoit, a suburb of Rochester, is a great market gardening section, with many small green-houses.

Florists' establishments are numerous and many of them of high order. One of the most prominent greenhouse establishments is that of Vick & Hill, and the principal stores in the business section of the city are those of Salter Bros., John B. Keller's Sons and H. E. Wilson, the two former being very elaborate and well appointed.

Rochester hospitality is boundless as everyone knows who has ever come in contact with such men as Charlie Vick, Wm. C. Barry, Chas. Brown, Frank A. Stecher, Dick Salter, Will Keller, Geo. B. Hart, Al Salter, Chas. J. Maloy and a host of others.

The hotels of Rochester are modern and numerous, the charges moderate and the service unexcelled. Leading hotels are the Powers, the Rochester and the Seneca.

### Begonias Not Growing.

ED. AMERICAN FLORIST:—

Enclosed are some rooted cuttings of begonias. Can you tell me why they will not break or throw up new shoots from the base? They were potted into 2½-inch pots about two months ago and stopped about a month or six weeks ago. Is this usual? These are stem cuttings, but leaf cuttings are just the same.

C. W.

It is not unusual for these plants to be slow in throwing up during hot weather. Probably a little patience is all that is needed. The plants were extremely dry when we received them, but possibly this was owing to the time they had been on their journey.

CLINTON, N. Y. On June 13, at the home of Russell Kilbourne on Elm street was held a regular meeting of the Utica Florists' Club. About 25 members were present, including florists from Rome, Oneida, Canastota, Ilion and other places. At 9 o'clock a fine supper was served by Mr. Kilbourn, after which a business session was held. The idea of having a dinner at the St. Charles hotel, Sylvan Beach, in the near future was talked over and the matter left open to be decided upon later. Informal talks were given by a number of those present.

## THE ROSE.

### Staking and Cultivating.

Do not fail to stake and tie the young stock as soon as possible after planting, especially the grafted plants. Use a 54-inch stake for the teas and hybrid teas and five-foot stakes for grafted plants in solid beds that are intended to be carried over several years, as the plants often reach the height of six or seven feet the second year they are carried over. A good substantial brace to fasten the running wires to should be fixed firmly at the ends of the beds or tables. The neatest, by far, is a frame constructed of one-inch steam pipe; old pipes

Chas. H. Vick.

Superintendent of Trade Exhibition at Rochester.

answer every purpose, as they can be painted several good coats, giving them a good appearance. Cut two pieces for the sides or uprights and thread them on one end to which fit a 1x1¼-inch tee. The cross pipes can be cut a little longer than the

width between the two outside rows, say two inches, and the uprights should be set far enough apart to let the outside wires come inside the tee fittings. Force the uprights into the ground firmly by driving them down, placing a solid block over the fitting to keep from breaking it. The running wires should be about four feet above the beds; directly over the plants, so the cross pipe will of course be the same height; the cross piece can be wedged firmly in this T with 12-d. cut nails.

Use No. 18 galvanized wire to tie the stakes to and set the stakes about one inch to the side of the plants on a line with them. When tying the stakes to the wire wrap the twine around the running wire twice, then over the stake, once around the wire on the other side, bring in front of stake and tie; this tie will prevent the stake from slipping from side to side. Stake the center rows and tie them first as this will be found much handier than having the two outside wires in the way if four rows are being staked, and be sure to have the running wires straight and the same distance from the beds. This is easily accomplished by measuring the distance at the ends and fastening a few stakes along the wire about 30 feet apart before tying the rest. When staking the Beauties we prefer two stakes to the plant placed each side of the plant about eight inches apart. These stakes can be six or seven feet in length if they have sufficient head room and should be fastened to two running wires, one about four feet from the ground and another two feet higher. Beauties staked in this manner can be easily tied through the whole season and will furnish the much to be desired straight stems; the two-stake system gives one the chance to keep the plants spread a little, allowing a better circulation of air and preventing black spot in a marked degree.

In reference to the cultivation of the young stock, the first crop of weeds should be allowed to get several inches high so they can be easily removed, bringing them up by the roots; if the small weeds are merely rubbed over they will continue to be a lot of trouble, as many are only broken off, soon starting into growth again. As soon as the crop of weeds is removed the beds should be carefully cultivated and leveled, care being taken not to break off any of the tender shoots at the base of the plants. Keep a careful lookout for the manetti growth on the grafted plants and remove all such growth close up to the bark. If this work is looked after while the mametti growth is tender a quick downward pressure with the fingers will remove the shoot easily. The young stock will from now on require cultivating once a week. A good hand rake for this work can be made of four pieces of rose stake wire about 14 inches long; place the four wires together, then take some No. 18 galvanized wire and wind it closely around them leaving about four inches at one end unwrapped; fasten the winding firmly and then spread the ends like a fan; then bend the ends down, form-

Main Street, Rochester, N. Y.

ing a small rake which will be found an ideal tool and practically indestructible. Do not give any more water than the soil will evaporate from day to day. Syringe early and again at one o'clock and keep the plants dusted lightly with grape dust once or twice a week as occasion demands. During a cloudy spell of weather it will be advisable to dust everything carefully and be sure to syringe the plants thoroughly afterward, when the weather permits so as not to leave any of the old dust lurking around. Give the plants all the air possible from now on except side or end draughts. If there are any spots in the glass that are causing burned foliage, spot them out with a little linseed oil with just enough white lead mixed with it to barely change the color. These burning panes can easily be located by holding a piece of blank paper over the plants a while, a bar of light indicating the focused rays of the sun. E.

### Roses in the South.

The next two months are two of the most critical in the season, requiring a great amount of watchfulness on the part of the grower. Frequent heavy thunder showers are quickly followed by a piercing strong sun which has an enervating effect on man as well as on plants. Should the bed happen to be dry on such occasions, the young growth will be quickly scorched unless watered and sprayed at once. The beds should never be allowed to get the least dry and frequent spraying should be kept up even to late in the afternoon. There is no danger from this treatment at this season, but much harm may result if it is neglected. It is always prudent to lower the ventilators enough to turn the water during a rain storm, but they must be raised immediately on its cessation. Give all the ventilation possible day and night and by all means arrange for side ventilation if the houses are not so equipped. A quick growth is very desirable but beware that it is not too soft or serious trouble is liable to develop later in the season.

Keep the plants tied up, working the strong shoots to the center and merely tack up the brush to keep it from touching the ground. Disbudding is most important also. Some growers pinch out the buds shortly after they appear but in our experience we have found it better to let the buds just merely show color and then cut them back to the second leaf. The wood matures better this way and the succeeding growth is stronger with less brush. We have found too, that the plants sucker quicker from the bottom by this method of disbudding. If there is no more trouble from weeds a moderate mulch of very old rotted manure will work wonders in keeping the beds cooled and equably moist. The same culture will be all right for Beauties just now but it is better not to give them the first tie until they show growth from the bottom. They may grow a little tall and hang over but the slight bend is just what they need to induce them to break low down.

WM. LEAR.

## THE CARNATION.

SOME Illinois growers say that, notwithstanding the cold weather early in the season and the subsequent drought, their field plants look remarkably well. They have a large number of shoots and, although not as large as in some years, they are particularly solid and give promise of excellent results when benched.

be cleaned out of the benches and every particle of dirt and rubbish cleared away from underneath them. Repair any benches that need it and do not leave any broken panes of glass for the rain to flood any of the newly planted beds. Give the inside of the benches a thorough cleaning out, then apply a good coat of limewash.

The next question is that of soil. The man who prepared his compost in the spring will only have the turn-

A VIEW IN HIGHLAND PARK, ROCHESTER, N. Y.

### Work Indoors and Out.

The most important part of the carnation grower's work at this time is the caring for the plants in the field. With the time for housing the plants only a week or two away it is necessary that they be given every encouragement. Unless prevented by the ground being in a wet condition it should be cultivated once every week, and if very dry often will be very beneficial to the plants. Topping back the shoots must also receive attention as quickly as they need it to insure a short stocky plant with ample growth shoots. Keeping the ground free of weeds is another steady job and if the field is of large extent the weeders can almost follow themselves up just at this for if the plants are slow of growth the weeds always seem to be as active as ever. After one has got the field work well in hand the houses should be got in order to receive the plants, all the old soil should

ing to do as it is brought into the greenhouses so that its parts are thoroughly incorporated, and in cases where the sod was ploughed up some time previously and allowed to sweeten out and rot, the adding of the manure will be all that is necessary. The proportionate parts of the compost should be one part of well rotted cow manure to four parts of soil. Many growers follow the practice of filling the soil into the benches a week or two before bringing in the plants, keeping it moistened down so that the weeds will grow and be cleared off before planting, but we like to get our plants into as fresh a soil as possible and do the moistening down gradually after the planting has been done, finding that clearing of the weeds directly after planting must of a necessity be done quite frequently and this constant working of the soil is one of the essential parts of the plants making a good growth.

Many of the large growers will be starting planting between July 15 and 20, but for the average grower the first two weeks in August is the best time. Plants are smaller for planting then than if planted in September but they get away much quicker and produce good results earlier in the season. This very dry weather causes one to be tempted to water the plants in the field but if it is possible for the plants to pull through in any kind of shape we advise against the practice. We have watched this pretty closely and have found that the plant which has not been watered outside, even though it does look to be a hard knot when planting, will get away faster and give better results than a plant that has put on a luxuriant growth outside through copious waterings. The varieties of the Lawson type and Winsor need very early planting to get them in first class condition early in the season. These being of the short jointed growth, the first flowers come with very short stems, so act accordingly and get these kinds into their quarters first. The Enchantress family can be planted at any time and still make good; the same can be said of Beacon. White Perfection gives best results when planted about the middle of August, but those varieties whose growth resembles Lady Bountiful are generally late bloomers and should be left in the field longer than others to make as large a plant as possible.

C. W. JOHNSON.

#### Summer Treatment.

Cultural notes on carnations during the latter part of July are likely to be brief, for most of the growers are either lifting and replanting, or else preparing to do so. The old crop is usually well worn out by now and the demand, like the flowers of summer, is rather attenuated. The emptying and refilling of the houses is hot and heavy work, and everyone connected therewith breathes a sigh of relief when the last bench is filled.

At the time of writing the weather in the east is very hot and dry, and until a shower softens the ground there will not be much chance for lifting plants from the field. In the meantime the weeds must be kept down, and hoeing kept up in order to preserve the dust mulch that does so much toward conserving the moisture about the roots of the plants. Experiments made by scientists have proved that frequent light cultivation prevents the rapid evaporation of water from the ground, and are thus beneficial to crops during a dry period, but some judgment must be used in this operation, from the fact that different soils require different treatment to produce the best results, and a light sandy soil does not require so frequent cultivation in dry weather as a heavy clay soil.

In brief, to quote Prof. F. H. King, an agricultural scientist who speaks authoritatively, "the loss of water from heavy ground that has a firm surface is about one-third greater per day than from the same ground with a dust mulch one inch deep." This means that some of us do not cultivate as frequently as we should, while possibly some having a light soil may cultivate too much. It is also well to go over the field frequently in order to

do the necessary topping, for flowering shoots are not needed on the plants at the time of lifting, and the more topping one can do in the field the more growths there should be to produce flowers later in the season. At the time of lifting, the plants should be protected from the sun and wind as much as possible, planting and watering going on methodically. Then keep a little close for a few days and spray often enough to keep the plants from wilting, and the roots will soon get

The Late James Vick.

Founder of the Vick Business, Rochester, N. Y.

into action again. Supporting and tying will also occupy many odd hours after the plants are again under glass, and then the regular routine of the season, including wiring, stringing, weeding, cultivating, disbudding and fighting insects and diseases will again be in order, while the trying out of some novelties and, on many establishments, the crossing of some old ones will add interest to the yearly operations.

Assistant Superintendent of Rochester Parks.

## WITH THE GROWERS

Thomas Roland, Nahant, Mass.

Nahant is a pretty little town snugly tucked in on the Massachusetts coast, and it is a pleasant hour's trip by steamer from Boston to reach it. There are many good towns along the New England coast, for the Puritans and patriots early acquired the habit of founding towns and staying with them. But Nahant is different from most other places, which is quite natural. It is a pleasant summer resort, and to illustrate the fraternity that exists among the regular residents it may be stated that United States Senator Henry Cabot Lodge, who lives there, goes to town meeting as one of the plain people. He nearly always presides, but at this year's meeting, July 7, he preferred to sit with the boys. We are not writing a history of Nahant or an account of its town meeting, interesting and stirring as both are; we merely wish to get the reader's mind fixed on the place on account of what follows. The fact of our being there on town-meeting day was merely a coincidence.

We went down to see Thos. Roland and his work, for a Boston man had told us that "he is the greatest plant grower around here." After a chat with Mr. Roland and a look at his place, we came away with the impression that the Boston man was right. Though he has only been there about 15 years he has built up a fine range of 70,000 to 75,000 square feet of glass. His range, home and grounds are all models of neatness and the grounds have fine landscape effects. To people remote from the scene of his labors, Mr. Roland's name, in recent years, has frequently been associated with the rose, Lady Gay, which he has grown and yet grows to perfection. Dorothy Perkins, Crimson Rambler, Hiawatha and other pot roses are also seen in profusion. As a matter of course, the season's business has pretty well cleaned out the houses, but in the garden we found a large stock of roses, hydrangeas and other plants being grown on for next season. There are yet on the place a number of fine hydrangeas in good bloom, a noteworthy feature being a new one, plants of which attracted much attention at the orchid exhibition held recently in Boston.

Though much good stock is now planted in the open, the houses are by no means empty. There are fine collections of crotons, acacias, orchids, Begonia Gloire de Lorraine, cyclamens and ferns, all of which look well. Mr. Roland is quite an extensive grower of heaths and his stock, which is now in the open, looks well. In a considerable section of the range where the winter pot stock had been sold out, chrysanthemums are now being grown for cut flowers, and the crop will be out in time to make room for the incoming plants. It is impossible to here enumerate all the evidences of intelligent plant growing to be seen at this place, so we will remind our readers that there will be a great National Flower Show in Boston in March, 1911, and if they are on hand they will

doubtless see for themselves some of the perfections of Mr. Roland's art of making things grow.

#### William Sim, Cliftondale, Mass.

It is always interesting to visit and talk with a man who has departed from the beaten path, taken short cuts that are less tiresome and have enabled him to arrive at his destination in good time, in good spirits and with money in his pocket. On a recent visit to William Sim, at his extensive range, Cliftondale, Mass., we were more than ever impressed with the importance of striking out along new lines, providing foresight and good judgment are used. Some years ago—not very many, for he is yet a comparatively young man—he bought a few acres of land at Cliftondale that, up to that time, had been generally considered worthless. He erected greenhouses and went to work improving the land. From the first he has been noted as a man of initiative energy. As we recall it, he first attracted the attention of the trade by his fine violets and chrysanthemums. He is yet a great violet grower, but has dropped chrysanthemums and has of late made a record as a grower of winter flowering sweet peas, and the stock which he grows is always in demand in the Boston market. But the foregoing, important as they are, but cover a part of his progressive activities. He had thought it unprofitable to have vacant houses in summer, and started to grow tomatoes, cucumbers and muskmelons under glass. He has just sold a great crop of tomatoes, is now marketing hundreds of boxes of cucumbers and a great crop of muskmelons will soon be ripe.

His latest venture seems to us to be the most original of all. He has 20 acres of sweet corn, part of which is now ready for market. All of this was started in 4-inch pots under glass, and when well up was transplanted to the field. This, to many, may seem like a large undertaking, but nothing is too large for Mr. Sim if he thinks it will pay, and being a careful Scot—some people say "canny" but we don't like that word—he usually thinks right. He conducts his growing systematically, not trusting to chance or luck. For instance: Though the corn looked well when we visited the place, the weather was hot and there were signs of drought, forthwith he set a force of men at work piping the field so it could be watered at will. He has his own water system, the supply coming from a number of wells each 50 feet deep, from which the water is drawn by a powerful pump, there being always an unlimited supply, with good pressure. He expects to have the entire corn crop marketed by the middle of August. The stalks are sold to neighboring dairymen. The foregoing is but a sketch of the work of this man who has literally made the wilderness bring forth and blossom. Throughout his entire range and gardens the same painstaking care and judgment is shown, it being evident that everything is carefully thought out.

Incidentally it may be mentioned that he has but recently moved into a fine new residence, erected during the past fall and winter. The site for this was another instance of his capacity

to overcome obstacles. It was in the midst of several acres on a gently sloping hillside, the gentle slope being the most commendable feature when he took hold of it. It was practically a ledge of rock with large boulders thrown in and scarcely enough verdure to support a grasshopper. However, that did not bother Mr. Sim. A beautiful and substantial home was erected, the boulders were cleared off and hundreds of loads of good loam were hauled in to make a lawn which was later laid out by himself, seeded, and planted with a fine variety of trees and shrubs, the latter being planted both individually and in groups. We cannot close this note without a few personal words regarding this man who possesses to such an eminent degree that quality which has been aptly termed "sancti-

ding plants and his specialty, lettuce. The average output is 100,000 heads of lettuce yearly, which find a ready market in Bloomsburg and Wilkes-Barre.

J. L. DILLON, BLOOMSBURG.

The visitor who goes into ecstasies over the gorgeousness of the blooms in the mammoth greenhouses owned by J. L. Dillon Estate, only half appreciates the infinite pains that have been expended in coaxing these flowers to grow. It was in 1875 that this enterprise was established in a comparatively small way by the late J. L. Dillon, who for a number of years was one of Bloomsburg's leading business men. The original houses are located near the normal school, and as they stand today make a group of 12, having something over 40,000 square feet

The Late Geo. Ellwanger.

ESTABLISHED THE ELLWANGER & BARRY NURSERIES, ROCHESTER, N. Y.

fied common sense." He is modest and unassuming. He tells you what he has done, but he tells it all as though it was merely a part of the day's work. He has a wife and four children, ranging from a sturdy boy of about 14 years to a baby. The two oldest are boys and they already show an interest in the noble art which their father is following with such marked success.

#### Growers in Columbia County, Pa.

The International Magazine of Industry is a publication giving prominence to all classes of industrial establishments in various parts of the country and from its issue of June, 1910, we cull the following notes of growers in Columbia county, Pennsylvania:

D. H. CREVELING, BLOOMSBURG.

Noteworthy among the establishments of Columbia county is that of D. H. Creveling, one of the country's most successful lettuce growers and florists. Mr. Creveling established this business in 1903 and owns and conducts the entire business himself. He has four greenhouses and conservatories covering more than 19,000 square feet and equipped with every facility for the propagation of bed-

ding plants and his specialty, lettuce. The average output is 100,000 heads of lettuce yearly, which find a ready market in Bloomsburg and Wilkes-Barre.

of glass. Seventeen years ago the houses on Fifth street were commenced and these have been added to from time to time until today they are 14 in number having over 100,000 square feet of glass, the two plants making one of the largest greenhouses owned by one person in this part of the state. The product of the houses are cut flowers and pot plants of all kinds and the flowers are sold throughout this part of the country. The Dillon Estate markets the pot plants and has a large sale covering the United States, Canada and extending even so far as England. In the several departments are from 20 to 25 skilled and practical workmen. This plant also does a large business in furnishing decorations for dinners, banquets, receptions and all social functions, giving special care to supplying funeral emblems to order. In the conducting of the business Mrs. Dillon is assisted by her son, M. G. Dillon, who is experienced in this work. Mrs. Dillon is a thorough business woman, and is highly esteemed in all circles of life in her home city, while the business that she conducts so successfully is known throughout the country for its high standard of production.

JOHN A. SMETHERS & SON, BERWICK.

The greenhouses of John A. Smethers & Son, on East Fourth street, cover over 11,000 square feet of space and are fitted with modern appliances for regulating the heat and conducting the business. There are six greenhouses, which were established and built by John A. Smethers in 1888. A few years ago Mr. Smethers associated with him his son H. K. Smethers; both men are experienced and practical in this work. The flowers and garden produce are grown for both the wholesale and retail trade, and a specialty is made of carnations. These as cultivated here have made the cultivators deservedly famous. The members of the firm are numbered among the best known business men in the county whose success is entirely due to careful management and skill.

D. W. DAVIS, BERWICK.

The D. W. Davis Greenhouses were established in 1906 by the present proprietor, who has conducted them since their inception. The houses are eight in number and have over 26,000 square feet under glass. The office, show and shipping rooms are large and fitted with modern appliances, making one of the most modern greenhouses in this part of the state. Here is grown the choicest flowers, particular care being given to carnations and roses, although Mr. Davis does a large business in pot plants, and also raises garden produce during the winter months. In cut flowers he is always prepared to furnish stock in any quantity and variety, and gives particular attention to the furnishing of decorations for banquets, receptions and social functions, and for funeral emblems. His houses are conducted under his personal supervision and there are several skilled and practical assistants employed. Mr. Davis has spent 15 years in greenhouse work and understands its every detail.

## CHRYSANTHEMUMS

### Cultural Notes.

The benched plants for cut flower purposes are now making a vigorous growth and constant attention is necessary to keep the side shoots picked off. Some varieties need going over more often than others. Polly Rose and the Ivory types will need looking after every three or four days when in active growth. The early planted exhibition stock must also be followed up close in this respect or it will be a difficult matter to have the right buds on time for selecting. This work is best done early in the morning, it being more comfortable for the operator and the shoots rub out much better than in the middle of the day. In doing this work, start at the top of the plant and work down so that if by accident the intended leader is broken off there will be another to fall back on. All of the varieties that were planted early are now making a summer or July bud and with some of the varieties this bud is very deceiving, having the appearance of a growth shoot rather than a bud.

Golden Eagle is one of those varieties that it is necessary to be careful with and it is safest to allow

the shoots to develop far enough to plainly tell the difference. But do not carry this to the extreme and allow the growths to get over large before attending to them. The proper shoot to leave to go on to make the growth is the strongest one at the top. The plant throws three growths very near its apex, a center one which at this time is the summer bud and should be removed, and two others, one a little above the other. Either of these growths are safe to leave to go on but the upper is generally not as strong as the lower, will not produce as fine a bloom and will bud up again much quicker. Another very important part of the work at this time is to keep the surface of the soil open so that the air can penetrate it. The every day syringings will batten down the surface and cause a green scum to form if it is not kept open by frequent scratching. Keeping the soil open also allows the water to pass freely through it.

Syringing two or three times a day during hot bright weather is now necessary. Also dampen the walks and

Grass Walk in Ellwanger & Barry's Nursery, Rochester, N. Y.

underneath the benches to maintain as moist an atmosphere as possible. Caution must be exercised to guard against the soil in the beds becoming over wet with so much syringing, also be sure the soil is in an even condition clear through. It seems hardly necessary to mention the matter of proper staking and supports for the plants, yet if this is not carried out as soon as needed the lack of supports will quickly ruin a number. The method of supporting and tying up must be governed to a great extent by the bench. Wires across the benches at the base of the plants and others to correspond (high enough above any growth the plants are likely to make to properly support them) with upright strings from wire to wire at each plant and the plants fastened to the strings is the method most generally in use and is one of the most serviceable.

Some of the very heavy growing exhibition varieties which often attain a height of eight or nine feet with correspondingly heavy foliage will have to be supported by staking to be able to keep the growths in order. The very early planted exhibition stock, being grown to the limit for exhibition cut flowers, can be encouraged a little by being treated to weak applications of liquid manure once every 10 days, provided the roots have obtained thorough control of the soil with occasional light top dressings of soil and fertilizer, a 5-inch pot full of fertilizer to a wheelbarrow load of fine soil. A light dressing of fine bone-meal scattered over the surface of the beds and well raked in is also good for a change. We prefer not to mulch with manure of any kind for a little while yet, it having a tendency to clog up the soil. Give the plants all the air possible and keep a sharp lookout for red spider especially on any plants near woodwork and side walls.

This season seems to be particularly trying in the matter of keeping down black and green aphid but constant spraying with the nicotine preparation or tobacco tea will get the best

ELLWANGER & BARRY'S NURSERY, ROCHESTER, N. Y.

Entrance to Grounds and Office.

of them if regularly followed up. Every bench should be sprayed at least once every three days to keep the plants thoroughly clean. All the early and mid-season varieties being taken care of and well along in growth the late varieties if not already planted into their permanent quarters, should be got there as soon as possible. Clean, healthy young stock from 2¼-inch pots at this time is ideal for planting for late work. One of the most important points to bear in mind for late stock is to give the plants a bench where they will get free light and air at all times. Make the soil good and firm and be a little cautious about the watering until the plants have obtained a good hold of the soil.

C. W. JOHNSON.

#### Specimen Exhibition Plants.

The large plants being grown for specimen bush or standard exhibition plants should now have every encouragement to make growth. The final potting having been done in early June the plants are now well established in the soil. From now on it must be constant watching every day to care for their every requirement. At present, and until about August 1, the one most important point is to keep the shoots topped back; the closer this is followed up and the more growths that can be encouraged to form, the larger will be the specimen. One thing to be careful about is not to pinch back too hard but be sure there is enough growth from the last topping to make two or three breaks. Also pinch evenly so that the specimen will form evenly. Plenty of air and space directly around each plant is an absolute necessity. Good specimen plants of any kind cannot be grown in cramped quarters and this applies particularly to the chrysanthemum.

When the plants are well established in the pots they require lots of water but they should not be kept over-wet at any time; if the soil is allowed to dry out pretty well between every watering it will remain in a sweet condition and the root action will be more vigorous, but when the plants are watered water thoroughly and repeat again when necessary. As most of the specimen chrysanthemum plants in this country are grown under glass the entire season it is necessary to syringe several times a day to insure a moist growing atmosphere, also to dampen the walks, the vacant bench spaces between the plants, underneath the benches and an occasional spraying outside on the glass during very hot weather. Keep the surface of the soil in the pots constantly scratched over to keep it open and prevent its baking; a crusty soil will cause the water to run over it and pass down between the ball of the plant and the sides of the pot instead of penetrating freely into the soil where it can do the plant some good. Well established plants will now take weak applications of liquid manure once in 10 days or two weeks but this is open to the question as to the condition of the plants and the treatment they are being subjected to and must be governed by the judgment of each individual grower who alone knows of his plants' conditions.

C. W. JOHNSON.

## HALF HOUR CHAPTERS FOR PLANT GROWERS

### Genistas.

While genistas are among the easiest of all greenhouse plants to grow, they require a good deal of pinching or clipping to keep small plants in shape for sale. The growth at this season is apt to get too rampant and run away, causing an ill-shaped plant. There is no risk, however, in clipping the plants into shape for there is plenty of time yet to harden and ripen up the growth before fall and this is all that is necessary to induce plenty of flowers. The best position for them now is outside in plant protectors with the pots plunged in ashes or litter to prevent the full rays of the sun striking them and burning the roots. Plants recently repotted will soon have the whole of the soil full of roots and will take a good deal of water. Some growers commence feeding with liquid manure but it is quite early enough for that as yet. It is better to let them have a really good hold upon the soil in the pots before commencing to feed than to run the risk of surfeiting the roots by applying food too early.

### Pot Chrysanthemums.

The work with pot chrysanthemums now is practically a repetition of what was done last month and consists of small and frequent shifts and regular stopping of the shoots to induce a bushy habit. While theoretically a chrysanthemum can not have too much sun there are times, such as after a shift, when a light shade, either under glass or in the open, is an advantage. It will lead to loss of the lower foliage of pot plants if they are exposed to sun directly after repotting and this greatly detracts from their appearance. The leaves may not fall just now, but the mischief is done just the same and will be apparent later. This frequent shifting causes considerable trouble and, incidentally,

expense but it is necessary if the plants are to be kept dwarf and of good habit. Plants given a big shift will make a stronger growth for a time but it will not answer so readily to stopping nor will it be so well ripened, consequently will not produce flowers of such good substance as the closer growing, harder growth and foliage caused by the frequent shifts and stopping. Growers for cut flowers have quite a different end in view and go after it in a different way. They keep their stems green and growing and do not trouble about ripening the growth but for pot plants the growth must be slower and consolidated as it is made if good flowers and plenty of them are to be produced.

### Araucarias.

Good plants of araucarias are offered by specialists and importers now at far below what the price will be at Christmas and it will pay any grower who has spare room at this time to purchase plants and grow them on. The best thing—to save freight—is to purchase stock that needs a shift and have the plants shipped out of pots, the balls being kept intact by careful wrapping in paper or in the paper pots now being made for this purpose. This is a matter that can easily be arranged by correspondence with the dealers. As soon as the plants arrive they should be examined and if the balls are dry they should be placed in a tank or some other receptacle to be thoroughly soaked before potting. It is not wise to put the rushing individual, who boasts of how many plants he can pot in a minute and then wastes five minutes talking about it and hindering other help as well, to pot this stock. Let the work be done carefully so that each plant stands fair in the center of the pot and upright and use the potting stick to thoroughly firm

AT THE E. G. HILL CO.'S ESTABLISHMENT, RICHMOND, IND.

CINCINNATI FLORISTS AT ANNUAL ELECTION OF OFFICERS OF THE FLORISTS' SOCIETY AT GUS ADRAIN'S, JULY 11.

the soil and see that all interstices between the old ball and the pot are filled up. The soil for these plants should not be particularly rich, a good sound loam with one-fifth of well dried cow manure and some sand if the loam is at all heavy being quite rich enough for them. The araucaria is almost a hardy plant, liking a cool airy position and only partial exposure to sunlight. In a house fairly heavily shaded and well ventilated the plants take on a good deep green tint and grow well. They also do well in shaded houses or pits or in plant protectors outside if sprayed freely and shaded from direct sunlight.

#### Jerusalem Cherries.

There is no question about the superiority of plants kept in pots right along over stock that is planted out in the open ground in summer. The grower who neglects his plants may just as well plant them out as not for they will be less liable to damage outside than inside, but plants that are kept growing by careful attention to their needs now will be far better than others planted out and lifted just at a critical stage, such plants always suffering more or less from the disturbance. Plants now in 2½-inch or 3-inch pots should be given a shift into 5-inch, using a sound fibry loam rather than a rich compost in order that the plants may have a good root system. It is easy to feed with liquid manure later as it becomes necessary. The shoots should be kept regularly pinched right along and not allowed to flower yet. Keep them in a cool moist bottom of ashes or gravel and spray regularly, also damping down between the pots twice daily. A cool and moderately shaded house or frame is best for them at this stage and the atmosphere must not be allowed to dry up or red spider and other

insects will soon ruin the foliage. Just after repotting considerable care is necessary in watering, but when the roots have again obtained a good hold of the soil they must be kept moist. In a few weeks the plants will have run through all the new soil and feeding will be in order, beginning with weak liquid manure water and increasing the strength later.

#### Cleanliness and Order.

There is nothing that stamps a plant grower as unsuccessful so quickly as a place out of order, where pots, oddments of soil, plants that have become useless, old stakes and labels and other rubbish are lying around. The successful and up-to-date grower knows that in this accumulation of odds and ends he is losing valuable space, spoiling the appearances of his houses and, worst of all, laying the foundation for attacks of insects and disease. For it is not in vigorous growing plants that disease first appears nor is it they that are first attacked by insects. It is the plant that has gradually gone out of cultivation through want of cultural care whose enfeebled condition invites these attacks and makes a stronghold for the enemy from which congenial quarters the healthy vigorous stock is attacked. It is worthy of note, too, that whenever a place is put into good order it is less trouble to run than an untidy place. The men know that if anything in the way of rubbish is left about they are in for a calling down from the foreman or whoever is in charge and no man worth his salt is going to run the risk of losing caste with his employer for the sake of a little care in this respect. The spirit of tidiness is infectious and far reaching, the youngest boy on the place or the oldest man catching it if it is constantly before him and thus the foreman or employer who has not

to be constantly telling his help about these things is left free to go about his business without the petty irritations caused by seeing these evidences of carelessness on all sides. It is an easy matter when, for instance, a bench of plants is being given a new stand to have a rubbish box or basket at hand in which to dump dead plants, leaves or anything else. The plants as they are reset are picked over, the soil on the surface moved if necessary, the surface of the ashes or gravel scratched over and everything left ship shape. Then a man finishes his work as he goes and has not to be followed by another to clean up after him. A man who is tidy in his habits this way though inexperienced is worth far more than a more experienced one who has got into slipshod habits. The first will gain experience as he goes but the one who is careless and "sot in his ways" is as likely to change his habits as the Ethiopian his skin or the leopard his spots. There is no hope for the untidy plant grower.

#### Preserve the Toad.

Professor Washburn of the Minnesota University farm finds toads to be friends of the farmer. They feed entirely on an incredible number of insects. The federal Department of Agriculture, investigating the toad, discovers the startling fact that in 24 hours the insect food consumed by one toad equals in quantity four times the capacity of its stomach, which is practically filled and emptied four times every 24 hours. One hundred and fifty-nine stomachs examined by the department showed a content of 19 per cent of ants, 16 per cent of cut-worms, 10 per cent of thousand-legged worms, 9 per cent of caterpillars, 8 per cent of ground beetles, 5 per cent of destructive weevils, 3 per cent of grasshoppers, together with crickets, spiders, sow bugs, potato bugs and a miscellaneous lot of other insects. Protect the toad. Teach the thoughtless boy friendliness to this helpless, harmless, useful animal.—Country Gentleman.

## Society of American Florists.

Preliminary programme Twenty-Sixth Annual Meeting and Exhibition at Rochester, N. Y., August 16, 17, 18, 19, 1910.

TUESDAY, AUGUST 16.

Opening Session.

First Day, 2.00 p. m.

Address of Welcome..... His Honor, H. H. Edgerton, Mayor of Rochester.

Address of Welcome.... Geo. Deitrich, Pres. of Chamber of Commerce.  
Response..... Robert Craig  
President Pierson's Address.  
Reports of Officers, Committees, etc.  
Report of Committee on President's address.

Discussion.

Miscellaneous Business.

Judging of Trade Exhibits.

Evening Session.

First Day, 7.30 p. m.

President's reception.

WEDNESDAY, AUGUST 17.

Morning Session.

Second Day, 9.30 a. m.

Use of Cement with Especial Reference to Greenhouse Construction  
Edward D. Boyer, Cement Expert, Atlas Portland Cement Co.  
Discussion.

Value of Experiment Stations to Ornamental Horticulture..... W. N. Rudd

Discussion.

Second Day, 11.00 a. m.

Selection of Next Meeting Place.

Nomination of Officers for 1911.

Report of Judges of Trade Exhibits.  
Annual Meeting Ladies' Society of American Florists at Seneca Hotel.  
Afternoon Session.

Second Day, 2.30 p. m.

Retail Florists' Association.

..... J. A. Valentine  
Discussion.

The National Flower Show.....

..... Wm. J. Stewart  
Discussion.

Evening Session.

Second Day, 8.00 p. m.

Illustrated Lecture.....

John Dunbar, Assistant Superintendent of Parks, Rochester, N. Y.

Second Day, 9.00 p. m.

Ladies' Reception at Seneca Hotel.

THURSDAY, AUGUST 18.

Morning Session.

Third Day, 9.30 a. m.

Sectional Meetings.

Retailers' Section.

American Carnation Society.

American Rose Society.

National Sweet Pea Society.

Florists' Hall Association.

Gladiolus Society.

Third Day, 11.30 a. m.

Election of Officers—Polls to remain open two hours.

Afternoon—No Session.

Third Day.

Bowling Contest and Other Sports.

Evening Session.

Third Day, 8.00 p. m.

Symposium on Greenhouse Heating.

Speakers to be announced later.  
Discussion.

FRIDAY, AUGUST 19.

Fourth Day.

In the hands of the Rochester Florists' Club.

## Trade Exhibitors to Date.

The Advance Co., Richmond, Ind.  
American Blower Co., Detroit, Mich.

S. A. Anderson, Buffalo, N. Y.

Chas. Apelt, Comfort, Tex.

Art Bronze Mfg. Co., Chicago.

Chas. D. Ball, Holmesburg, Philadelphia, Pa.

H. Bayersdorfer & Co., Philadelphia, Pa.

C. Betscher, Canal Dover, O.

B. S. Blake, Rochester, N. Y.

Bobbink & Atkins, Rutherford, N. J.

Arthur T. Boddington, New York.  
Lemuel Ball, Wissinoming, Philadelphia, Pa.

Wm. J. Boas & Co., Philadelphia, Pa.

L. B. Brague & Son, Hinsdale, Mass.

The E. C. Brown Co., Rochester, N. Y.

Brown Bros. Co., Rochester, N. Y.

John Lewis Childs, Floral Park, N. Y.

Climax Mfg. Co., Castorland, N. Y.

Conard & Jones Co., West Grove, Pa.

Arthur Cowee, Berlin, N. Y.

Robert Craig Co., Philadelphia, Pa.

N. L. Crawford, La Grange, O.

Henry A. Dreer, Philadelphia, Pa.

Detroit Flower Pot Manufactory, Detroit, Mich.

Chas. Eble, New Orleans, La.

H. Eichholz, Waynesboro, Pa.

W. H. Elverson Pottery Co., New Brighton, Pa.

Ellwanger & Barry, Rochester, N. Y.

The Foley Mfg. Co., Chicago.

Geo. M. Garland Co., Des Plaines, Ill.

Benjamin Hammond, Fishkill-on-Hudson, N. Y.

George B. Hart, Rochester, N. Y.

Herendeen Fg. Co., Geneva, N. Y.

A. H. Hews & Co., Cambridge, Mass.

Jackson & Perkins, Newark, N. Y.

Ionia Pottery Co., Ionia, Mich.

Kessler Bros., New York.

King Construction Co., N. Tonawanda, N. Y.

H. W. Koerner, Milwaukee, Wis.

Kroeschell Bros. Co., Chicago.

Geo. A. Kuhl, Pekin, Ill.

Lager & Hurrell, Summit, N. J.

Daniel B. Long, Buffalo, N. Y.

MacFarland Publicity Co., Harrisburg, Pa.

Mallory & Bridge, Lake Mills, Wis.

W. A. Manda, South Orange, N. J.

H. D. Mann Co., Syracuse, N. Y.

Henry F. Michell, Philadelphia, Pa.

John C. Moninger Co., Chicago.

Morehead Mfg. Co., Detroit, Mich.

National Clock & Electric Mfg. Co., St. Louis, Mo.

Jos. G. Neidinger, Philadelphia, Pa.

S. S. Pennock-Meehan Co., Philadelphia, Pa.

J. A. Peterson, Cincinnati, O.

F. R. Pierson Co., Tarrytown-on-Hudson, N. Y.

Reed & Keller, New York.

M. Rice & Co., Philadelphia, Pa.

Julius Roehrs Co., Rutherford, N. J.

Schloss Brothers, New York.

Shaw Fern Co., Pittsfield, Mass.

B. B. Stewart, Rives Jet., Mich.

Storrs & Harrison Co., Painesville, O.

Stumpp & Walter Co., New York.

Syracuse Pottery Co., Syracuse, N. Y.

Taylor Steam Trap Co., Battle Creek, Mich.

B. Hammond Tracy, Wenham, Mass.

Vaughan's Seed Store, Chicago.

James Vick's Sons, Rochester, N. Y.

Vick & Hill Co., Rochester, N. Y.

Wertheimer Bros., New York.

Wilson-Hoyt Co., New York.

A. J. Binley, Glens Falls, N. Y.

Lord & Burnham Co., New York.

## The Fancy-Leaved Caladiums.\*

## Twelve Best New Hybrids.

## NOT YET IN THE TRADE.

Edward G. Uihlein (1907). A glorious variety, a seedling of Diamantina, crossed with Elsa. Large pointed leaf, very wavy, the ground color a mixture of transparent pink, pea green and moss green spots or cloudings. Sinus bright red. Very distinct and vigorous.

Audubon (1907). Glowing red with violet reflections, scarlet ribs and green border, the latter vined deep red. Very robust.

Fred. A. Lewton (1907). Bronze-green, suffused with lilac, many rosy spots. Vigorous. New color.

\*Mr. Nehrling's paper commenced in our issue of July 10, 1909, and was continued July 31, October 9, November 27 and January 8, February 19, April 9, May 7 and 28, and July 2, 1910.

Henry Pfister (1907) Center red, ribs coral red, the entire leaf clouded pure white, red and moss-green in large patches. Very distinct.

J. D. Eisele (1907). Large leaves with black stems Ground color metallic green, densely and minutely veined and spotted deep rose, center transparent rose, ribs blackish-red. A very brilliant kind.

Mrs. Katherine Rinaldi Ferris (1908). Pure transparent white with narrow green border. Exquisite and very distinct.

Mrs. Sophia Nehrling (1908). A most distinct and exquisite variety. Pure milky white, a little transparent, narrow pink midrib and veins. The center suffused slightly with pink. Very delicate and striking.

Mrs. Geo. B. Green (1908) Large leaf, beautiful transparent rose, veined pure white, ribs emerald green, bordered by a white zone, narrow deep green border. Strikingly beautiful.

Souvenir of Hedwig Else (1908). Pure white with delicate thread-like green rib and veins. Very fine and delicate.

H. L. Beeman (1907). Clear purplish crimson, clouded with green, this again minutely freckled red Leaf stem has two dark stripes. Magnificent.

Mrs. W. L. Palmer (1907). A gigantic variety, very much like Rio de Janeiro. Leaf rosy red, suffused with white, yellow and green.

Walter (1907). Immense leaves, ground color deep transparent pink, red midrib and veins clouded deeper red. A fine color combination.

## Twelve Best New European Caladiums.

Le Resplendissant (Bleu.) Beautiful deep rose with a number of blood red spots. Very distinct, medium grower. Souvenir de Mademoiselle Henriot (Bl.) Creamy-white, with pure white spots and deep red veins and ribs. Medium.

Lady Dorrington (Bl.) Very small and finely shaped milk white leaf suffused with greenish blue in the center and with round red spots. Weak in growth, but exquisite and unique in coloration. (These three varieties were introduced to the trade in 1900.)

Justizrath Dr. Friedleben (Hoffm.) 1899. Large leaf, very bright red center, with red spots and green edge.

Frau Direktor Siebert (Hoffm.) 1901. Pointed leaf, creamy white, center brick red, irregularly spotted pink and green.

Blanchette (Hoffm.) 1902. Pure white or pink, ribs bright red, border green.

Admiral Togo (Hoffm.) 1902. Transparent rose pink, darker red veins, green border.

Marie Moir (Hoffm.) 1903. Unique coloring, white with green ribs and veins and bright blood red spots. A red spotted Candium.

Souvenir of M. J. Burn (Hoffm.) 1905. Very vivid transparent red, with more or less wide emerald green margin.

Thomas Tomlinson (Hoffm.) 1905. Very deep red center, the blotches and markings of red surrounded by pure white margin, encroaching irregularly upon the deep green edge.

Lewis Waller (Hoffm.) 1905. Tall and vigorous. Center deep glossy red, deep green border.

Dorothy Peto (Hoffm.) 1905. Very bright opaque, pink center, irregularly encroaching into the more or less bright green border.

## Twelve Best New Brazilian Caladiums.

These and many others of A. Lietze's new Caladiums surpass everything in the line of caladiums heretofore known. None of the European kinds can rival them in beauty and in new color com-

bination, and all are strong growers. Their first leaves are disappointing, being almost entirely green, but every following leaf shows more color, until they outrival all others in transparency, brilliancy and unique magnificence.

Blumenau (L.) Transparent light lilac, veins and ribs creamy.

Campos Salles (L.) Transparent bluish, netted with white veins.

Bleu (L.) Broad pale violet ribs and center, edge grayish-green.

Anajatuba (L.) Creamy white ground-color, mature leaves almost entirely transparent claret-red.

Itaituba (L.) Most beautiful bluish violet, suffused with white.

Itapagibe (L.) A greenish cream-color with large transparent red clouds and blotches.

Joao Gandra (L.) Center fiery red, edge yellowish white, finally the entire leaf glowing red.

Camaragibe (L.) Santiny-yellowish-creamy, spotted and clouded with pink.

Dona Clara (L.) Transparent white, narrow green border.

Mauricio de Nassau (L.) Beautiful transparent dark wine red, clouded with creamy white. Very vigorous.

Guarapuava (L.) Transparent dark rose, yellowish green ribs and border.

Tibirica (L.) Magnificent claret red, transparent, ribs and spots creamy yellow.

### Twelve Best Red Caladiums.

All the red Caladiums are very gorgeous and fine for massing, particularly if grouped together with the white varieties, such as Ivory, Silver Queen, etc., or with light colored kinds such as Lady Dorrington. Most of them are weak in growth and cannot be propagated rapidly.

Ibis Rose (Bleu.) Delicate pure rosy red, leaf-stems green. A rather rare kind, of weak growth.

Gartendirektora Siebert (L.) A most dazzling red kind of pure scarlet rose, stems red. Exquisite, dense and bushy in growth.

Michel Buchner (Bl.) Of strong growth and brilliant red color.

Mrs. Harry Veitch (Bl.) One of the very best red Caladiums; of dazzling fiery red suffused with golden and metallic tints. A good vigorous kind.

La Lorraine (Bl.) A most beautiful rosy violet kind.

Tiriba (L.) Very strong in growth, large leaves, bronze red, finally entirely fiery red.

Cardinale (Bl.) Entirely cardinal red, very fine.

B. S. Williams (Bl.) Deep red, with violet reflections.

Flammant Rose (Bl.) Large leaves of a deep rose color.

Ernst Benary (L.) Violet red small leaves.

Grenat Rouge (Bl.) Beautiful garnet red, strong in growth.

Mangaratiba (L.) Dazzling red center, border suffused with bronze. strong in growth.

### Yellow Caladiums.

The great hybridizers Bleu and Lietze did not succeed in their attempts to produce Caladiums with a yellow ground. Bleu raised A. Chaber and Rayon d'Or, which sometimes show a yellow tint, but they vary, and Lietze's Ouro Fino also shows an exquisite yellow tint, but this soon disappears. Richard Hoffmann, today the greatest Caladium hybridizer in Europe, succeeded in raising the finest yellow Caladium in existence, which also has the advantage of being a strong grower. This is:

Golden King (1903.) The large leaves are pure sulphur yellow, showing transparent pink massive patches.

All of Bause's yellow kinds are weak in growth, but exquisitely beautiful and well adapted to greenhouse culture in the northern countries. They cannot

be grown in Florida, nor do they thrive in Brazil. They seem to need a cooler atmosphere than other kinds. The first hybrids were obtained by the late C. F. Bause about 30 years ago. These were the following:

Prince of Wales (B.) Golden yellow. Princess of Teck (B.) Orange-yellow, center and ribs deep red.

Princess of Wales (B.) Pale golden yellow, sometimes with red spots.

Princess Royal (B.) Golden ground color, crimson center.

Golden Queen (B.) Light yellow, rather canary yellow.

### Amazonicum Section.

The 12 best caladiums without hind-lobes. The characteristic of this new strain is that they are devoid of the two projecting lobes, thus leaving a distinctly ovate acuminate leaf. All the following are productions of a A. Lietze, who raised them from C. Amazonicum.

Suya (lost).

Castelnau, Deep green with bluish sheen, white ribs and deep pink spots.

Exu, Transparent rose center, zone mottled pink, white and green, green border.

Codó, Very robust, deep green ground, densely mottled white, pink and red. Beautiful.

Manoel Telles Barreto, Beautiful white transparent center, green border.

Don Manoel Lobo, Yellowish green, spotted rose, green and pink.

Crissiuma, Pure transparent white, deep blackish green ribs and veins.

Itapary, Deep rosy center, yellowish zone, mottled red, some large pink spots.

Ressaquinha, Pink, mottled glowing red and green, deep green veins.

Mambucaba, Center brownish red, white conspicuous ribs, green border.

Malhadinha, Magnificent carmine rose shade, very robust.

Penalva, Pure transparent white, green ribs. Exquisite.

Calajo, Brilliant red center, fiery red ribs. Magnificent.

### Albanense-Speciosum-Venosum Class.

Mrs. Oliver Ames (?) Creamy white, netted darker. Undoubtedly a hybrid of C. speciosum.

Countess of Warwick (?) Red center, narrow green border. A hybrid of C. Albanense.

Broad Arrow (Mead.) Deep glowing rosy red, narrow green border. The finest of its class.

Lucille (Mead.) Pure milky white, very beautiful.

Hedwig Else Nehrling (Mead.) Glaucoous green, white midrib, many rosy spots with a white edge. Very distinct. Hybrid of C. venosum. One of the most distinct and beautiful of its class.

Cherokee (Mead.) Small narrow pointed leaf, satiny red, narrow light green border. Leaf stems with two black stripes. Growth very bushy. Hybrid of C. Albanense.

Chickasaw (Mead.) Short broad bright red leaf, brighter red midrib and nerves, green border. Very fine. Hybrid of C. Albanense.

Thonatosassa (Mead.) Fine glossy green, leaf, with main ribs and nerves very light yellowish green, forming a conspicuous network; border red. Hybrid of C. speciosum.

Wekiva (Mead.) Long-pointed narrow leaf, black leaf-stems, green ground suffused brownish, network of light colored veins, narrow red border. Hybrid of C. speciosum.

Welaka (Mead.) Seminole name of St. John's River, Florida. Network of brown veins on deep green ground, white midrib, narrow red border. Hybrid of C. speciosum.

Apopka (Mead.) Large lance-shaped pointed leaf green network of

brownish veins. Hybrid of C. speciosum.

Choctaw (Mead.) Bushy in growth. Brownish-red center, bright red midrib and veins, green border. Hybrid of C. Albanense.

With the exception of the first two all the above are new varieties, and are now in the possession of Henry Nehrling. They are all very beautiful, distinct in growth and vigorous growers.

## OBITUARY.

### Mrs. Nathan Smith.

Mrs. Nathan Smith, widow of the late Nathan Smith, and mother of Elmer D. Smith of Adrian, Mich., died at Rochester, Mich., July 12. Mrs. Smith was nearly 87 years of age and had lost some of her physical and mental vigor, but was apparently unusually well on Friday, July 8, when she started from home with her son, to visit her niece for a time. They stopped in Detroit and she visited at the home of Dr. Ellis, an old family friend, over night, and then met by her niece's husband, went on out to Rochester. Visiting and planning Tuesday morning upon a visit to Mrs. Winegar's brother with home duties, had occupied their attention until about 10 o'clock, when Mrs. Smith was seized with an attack of heart failure. An hour later she had passed away, death coming to her before the arrival of a physician at the rural home of the niece.

Mrs. Smith was the daughter of Mr. and Mrs. Archibald Green, who were pioneers of Flint and Genesee county, Mrs. Green being the first white woman resident of Flint, and the first white woman to die in the county of Genesee. Mrs. Smith was born in New York state before the family came to the wilderness, but was only a tiny little girl when the trip west was made by her people. She was married at Southfield, which later became the home of the family, and the first year of their married life was spent near Birmingham. Mr. Smith was a cabinetmaker and joiner by trade and worked in Detroit, the family home being there for 15 or 16 years after leaving Birmingham.

Mr. Smith worked at his trade after they came to Adrian, and Mrs. Smith presided over the home and busied herself with her plants and flowers, as an expression of an inherent love. From a conservatory, which was first a part of her home at 167 West Maumee street, have developed the greenhouses of Elmer D. Smith & Co., at 167-175 West Maumee street, and formerly conducted by Nathan Smith & Son. Mr. Smith, with the growing demands of the greenhouse business, finally gave up his trade to assist Mrs. Smith, and together they developed the work step by step, assisted by the son, who later took over the management and who has made such a wonderful success in chrysanthemum development as to win national recognition.

To Mr. and Mrs. Smith were born two sons, the elder of whom, Alfred, enlisted in the Eighteenth Michigan infantry and died of pneumonia caused by exposure while in the service, and Elmer D. Smith, previously mentioned. Mr. Smith died three years ago. Mrs. Smith's time was largely taken up with her home and business interests while health and years permitted of her activity. She had been very prominent in the Ladies' Aid, which, during the war, did so much to give comfort to the soldier boys at the front.

### American Gladiolus Society.

There is every indication that the first exhibition of gladiolus blooms, under the direction of the American Gladiolus Society, will be very successful, but we hope that everyone interested in gladioli will lend their aid in making it an unusual success. Our membership is now about 110. We would like to double this before the annual meeting in August. Let us all give a boost. Start it by sending in your application.

ISAAC S. HENDRICKSON Pres.

A prize of \$10 is offered by H. H. Groff for best exhibit in white and light, dark, yellow and blue hybrids, not more than three spikes of any one variety (i. e. one to three spikes) one or more vases of each color section. Quality and value only to govern.

L. MERTON GAGE, Sec'y.

AN important item respecting the steam coal situation in Chicago will be found on page 1272.

THE Third National Horticultural Congress and Exposition will be held at Council Bluffs, Ia., November 10-19, 1910. Freeman L. Reed is superintendent.

VALUABLE prizes are offered by the St. Louis Horticultural Society for competition at its fall show, November 8-12, particulars of which are given on page 1247.

THE Lenox (Mass.) Horticultural Society will hold its annual summer exhibition at the town hall, Thursday, July 28. This exhibition consists chiefly of annuals and perennials, sweet peas, fruit and vegetables.—G. H. I.

A. WEBERBAUER has been made a director of a park in Lima, Peru, that is to be transformed into a zoological and botanical garden connected with the university. Mr. Weberbauer's work on the "Plants of the Peruvian Andes" is soon to appear.

REV. W. T. HUTCHINS has favored us with a copy of his excellent paper, read at the recent New York meeting of the National Sweet Pea Society. Most of the points touched upon have already been covered in Mr. Hutchins' articles in our columns.

A PAMPHLET in Spanish, and a translation of the same, concerning the industrial palm trees of the Isthmus of Panama, have been received from Consul James C. Kellogg, of Colon, and are on file in the Bureau of Manufactures, Washington, D. C.

THE preliminary premium list of the State Florists' Association of Indiana for its fall flower show is out. The show will be held in Tomlinson hall, Indianapolis, November 8-12. Copies of the premium list may be had on application to A. F. J. Baur, Thirty-eighth street and Senate avenue, Indianapolis, Ind., secretary.

### Winnipeg World's Fair.

At a banquet to Premier Sir Wilfred Laurier of Canada given by the citizens of Winnipeg, Manitoba, July 12, he promised a grant of \$2,500,000 by the government to the World's Fair to be held there in 1914. Railways and local governments have promised an equal sum.

### Society of American Florists.

#### REGISTRATION OF FERN.

Public notice is hereby given that Kessler Bros., 52 W. Twenty-eighth street, New York, and G. Dreyer, Woodside, L. I., offer for registration the fern described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

#### RAISER'S DESCRIPTION.

Nephrolepis Dreyeri.—A sport of Nephrolepis Bostoniensis and of the Scottii type; of compact growth with flat leaves of dark green color. The fronds are narrow and droop over the pot when the plant is full grown.

H. B. DORNER, Sec'y.

July 14, 1910.

### Canadian Horticultural Association.

#### TARIFF IN PLANTS AND SUPPLIES.

The Canadian Horticultural Association, through its secretary, John Hall, 825 St. Catherine street W., Montreal, has issued to members a slip asking for their opinions as to whether a customs tariff should be imposed on various plants, cut flowers and supplies including those named below, also, if so, what the amount of the duty should be. Cut flowers, greens and leaves, bedding plants and plants of roses, carnations, palms, ferns, rhododendrons, box and bay trees, bulbs (Dutch and French) orchids, hardy perennials, cannas, caladiums and tuberose, rooted cuttings and plants being sent out for the first time by the disseminator, also flower pots and nicotides for fumigation purposes.

### American Rose Society.

#### AUGUST MEETING.

There have been more members of the American Rose Society paid up their dues the present year than at any time since the society was organized, and we have plenty of room for more, because the larger the revenue the better the work.

The Toronto Horticultural Society sends us word that it is very gratifying to receive from the American Rose Society the bronze and silver medals which have been forwarded to them as prizes to be offered in the city of Toronto. These medals certainly create an interest wherever they are received.

Making a long tour, it has been remarkable how many places are most beautifully decorated with rambler roses this season. The use of the rambler for decorating any odd spots is certainly growing.

The city of Rochester is making a strong effort to have a great show for the S. A. F. in August and the American Rose Society will call a meeting during the convention. President Elliott will do all that is in his power to push the society along, following in the footsteps of the able men who were his predecessors.

A matter of some importance that will be brought up for consideration at Rochester will be looking forward to the special prizes to be offered at the spring show of 1911. The American Rose Society in the combined show of all flowers wants to take the lead. Probably 60 per cent of all flowers raised for sale in America are roses and what we want to do is to get in advance enough people interested to make the rose show in 1911 the best exhibition that can be produced. We would like to have prizes enough to warrant drawing exhibits from every point within transportable distances.

BENJAMIN HAMMOND, Sec'y.

### Meetings Next Week.

Baltimore, Md., July 25, 8 p. m.—Gardeners' and Florists' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Cleveland, O., July 25, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit avenue.

Lake Forest, Ill., July 27, 8 p. m.—Horticultural Society of Lake Forest, Council Chamber, City Hall.

New London, Conn., July 27.—New London County Horticultural Society, Elk's hall.

Toledo, O., July 27.—Toledo Florists' Club.

Winnipeg, Man., July 27.—Winnipeg Florists' Association.

### GREENS

including the best in **Smilax**,  
**Asparagus** and **Ferns**.

From the American Florist, July 16, 1910

A word is in order here as to the way the cut flowers are handled which probably accounts for the excellent manner in which the stock arrives at the store. The flowers are cut twice daily and are placed in the cooling rooms for about four hours, just long enough for them to lose the greenhouse heat. They are then packed expeditiously and shipped by express to the store where they arrive in the very best possible condition. Here John Poehlmann takes hold, and any long distance shipments that have to be made are packed at once and leave by the quickest route, insuring their arrival in good shape even in the hottest weather. The wonderful growth of this business is a great tribute to the skill and energy of the Poehlmann brothers, one and all, and shows what great things can be done when the facilities for doing business are there and plenty of the right kind of help to keep things moving.

#### GOOD ROSES SCARCE.

While a few of the larger growers that devote a number of houses to summer roses exclusively are cutting a fair amount of good stock, yet there is nothing like a full supply and even the poorer kinds are not over plentiful. The heat has rushed the flowers out so rapidly that there is no substance to the petals and consequently the flowers do not last. Kaiserin is now proving its superiority as a summer rose, as White Killarney is thin and showing too much of a red tinge, while of Bride the less said the better. Richmond, too, has no size or substance and, although not so good in color, Cardinal is a far better summer rose in every other respect. It has flowers of good substance and on good stems, being almost the only red that stands the heat. Beauties are in fair order only, and there are great numbers of culls in comparison with the good stock cut. Not only roses but stock of almost all kinds fell off rapidly at the end of last week and there is very little in the way of good flowers in the market to do business with. The carnations that are arriving now are poor and small. Peonies are fairly good for so late in the season, some of the pink flowers especially so. Probably this week will see the end of the cold storage stock in most of the houses. In hardy flowers there is still plenty of variety. Gaillardias and tritomas are showy and help the window displays. Gladioli are arriving in large quantities. The best varieties of the America and similar types have a good demand and clean up regularly, but the outdoor stock, unless exceptionally good, hangs on hand. Sweet peas are poor and there is no demand, as retailers know they drop almost as soon as they are in the store. Asters are also poor as yet, but it is hoped the recent rains will help them. Those on light lands have suffered severely already, but those where the soil is

heavier are in a little better shape. There are some elegant eastern flowers of *Lilium rubrum* and other specimen forms in that help considerably with high-class funeral work which has been the only hope of the retailers of late. Feverfew, achillea, candytuft and other small flowers help out some, but the demand is not brisk. Lily of the valley is still good and there is plenty of it for all demands. The local supply of orchids is improving, but still falls short of the demand, and eastern stock is still sent in. Cattleyas appear to be about all that are grown locally and when retailers want white orchids, such as phalenopsis or *Dendrobium formosum*, they still have to depend upon the east. *Chrysanthemum Golden Glow* is seen, but there appears to be little demand for it. There has been quite a good call for water lilies and they have been very plentiful. Altogether the trade is healthy for this time of year, several wholesale houses reporting Saturday, Sunday and Monday as exceptionally good days for the season.

#### NOTES.

The Geo. Wittbold Co. reports a very busy season in outside work and the recent rain has greatly facilitated this. The year so far, according to Louis Wittbold, has been away ahead of last year in all respects, retail trade, landscape work and decorating. Already many good orders are booked for the Knights Templar conclave next month and fine stock is being prepared at the greenhouses to meet this.

C. Cramer, of the Cramer Floral Co., Salt Lake City, Utah, has been in town during the week. Although some growers are having fair success with roses in that locality, Mr. Cramer says they still have to draw on the east. He has nine houses of carnations which do well every year, the alkali in the water apparently not hurting them, but the roses are only a very partial success as yet.

John Zech, of Zech & Mann, took a couple of days off last week for fish-

ing, going down state to a point below Joliet on the Kankakee river. Albert Rott of Joliet and P. Peterson of the J. D. Thompson Carnation Co., were to have accompanied him, but both were forced to remain at home. Albert on account of a heavy lot of funeral work and Pete owing to a steam pump breaking down. However, Mr. Rott's assistant and the game warden of the district accompanied Mr. Zech and they had capital sport, 12 falling to John's rod. He is rather hazy in his replies when asked where he fished, and we believe wild horses could not drag from him the exact location.

In the earlier copies of the FLORIST last week, it was stated that L. A. Vaughan, of Vaughan & Sperry, had taken 58 bass the first day of his fishing trip. Everyone knows he is a modest man and when he turned up unexpectedly last week, it was reported that he came back to contradict this report and to put himself right in matters piscatorial among his friends. This we are assured was not the case and his return was for a totally different reason. The "intelligent comp" made it first 5, then 58, lastly 8, the correct score, which appeared in the later copies of the paper.

Vaughan & Sperry did a fine business on Saturday and Monday, quite exceptional for the season, and on the latter day were sold clean out. They are finding an excellent demand for the orchids shipped in from their new grower at Naperville. Some elegant gladioli have been showing here all the week, including fine America, also elegant peonies. Fred Sperry has been suffering from a severe cold but is sticking gamely to business in the absence of his partner. He will probably be ready for his vacation.

Fred Lautenschlager is never happier than when piloting a party of his out-of-town friends around, and he looked the part on Saturday when showing a number of vegetable growers from Indianapolis through the

# Summer Flowers

**New Beauties, Kaiserin, Rhea Reid, Pink Killarney, Maryland, White Killarney**

These are the best roses for hot weather. We devote a whole range of glass to their growth and our plants are two to five years old, giving big, strong flowers.

**Buy Direct of the Grower and Get Fresh Stock.**

**ROSES, our selection \$3.00 per 100**

## Peter Reinberg, 35 Randolph St., CHICAGO.

wholesale market. Fred Meyer, J. Hohlt and August Maschmeyer were of the party which was taking in the city enroute to the west coast for an extended holiday trip.

E. C. Amling is receiving large quantities of Liliun speciosum rubrum from the east which meet with great favor from the principal retailers. Business here has rallied considerably and on Saturday better prices and a heavy day were reported. Fine Killarney and White Killarney roses are also shown here.

Kennicott Bros. Co. is still handling good peonies, but the present week will probably see the end of them. Fine daisies, candytuft, achillea and tuberoses are also among the offerings. The trade here on Saturday last was the biggest ever handled by this firm on a Saturday in July.

Mrs. L. Natzke, wife of H. H. Natzke, 2336 West Nineteenth street, is going on a two weeks' vacation to her sister's summer home at Slocum's Lake, McHenry, taking her four young children with her.

The J. B. Deamud Co. has been showing fine chrysanthemums, Golden Glow, which move well, also elegant gladioli in variety.

LONG DISTANCE PHONE  
CENTRAL 2571.

52-54 Wabash Ave., CHICAGO.

Stollery Bros., 3063 Southport avenue, have some fine gloxinias, one kind, Erecta Superba or English Prize Winner, carries 30 fine flowers. The flowers are of mixed colors, some are crimson, others are pure white, or are delicately spotted and pencilled internally. This is a ready seller and the prices range from 75 cents to \$2.50. The houses are filled with chrysanthemums, there being 10,000 in all. Monrovia planted early in May is in the best of condition and Col. Appleton is also worthy of mention. A bench of poinsettia cuttings was put in last Tuesday. Mr. Stollery planted these cuttings different from other years; first he put a layer of sand, then a layer of sphagnum moss and on top of this another layer of sand. The point of the cutting touched the moss and inside of two weeks 95 per cent of the cuttings had rooted. Other years they averaged about 50 per cent. King Humbert cannas are also doing their level best. A new conservatory is being built at 1046 Wilson avenue, where the store is located. Outside of the parks this will be one of the best conservatories in the city and will cost \$10,000 when completed. It is 35x40 x25 feet high. The walls are of brick, 12 feet high and are finished off with cement, representing white stone. The conservatory is built with a large dome, having two skylights in, valued at \$500 each. There will also be a fountain display that will have to be seen to give one an idea what it really is. Stollery Bros. have secured a 10-year lease of the premises and are more than pleased with their new surroundings. Fred has charge of the greenhouses and buying and George has charge of the store.

Canger & Gormley have had an unusually good demand for wedding decorations this year and the orders are still coming. They have a carte blanche order to go ahead and make a specially fine decoration for the wedding of Miss Kohlsaat, daughter of H. H. Kohlsaat, and Mr. Sheppard, of St. Paul, Minn., which is to take place July 27. An unusual feature will be that the couple will be married at the bride's home in a floral automobile backed with Asparagus plumosus. The mantels will be banked with Easter lilies and garlands of swainsona will be used to indicate the path of the bride to the altar. Orchids will be used in the table decorations and the bride will carry a bouquet of white orchids. Her one attendant will be her sister, who will carry pink sweet peas. A number of plants will be used in the home and the musicians will be screened from view by a bank of palms. In the store we noted some excellent Lilium rubrum and Easter lilies. Mr. Gormley has returned from his vacation looking well and reports a very good time visiting around the northern suburbs.

J. C. Craig, 175 Wabash avenue, was very busy the past week with funeral work. A cross, standing seven feet high, was delivered to 4348 Wilcox

avenue, where the funeral of the late J. McAuliff took place last week. The cross was made up of white roses, white carnations, lily of valley and sweet peas, American Beauties were used for the base. A number of designs were sent out to Austin, where the funeral of F. Lomax, the well-known mining man, took place last Saturday. Mr. Craig has been spending the summer at Hillside and will leave for the Pacific coast next week.

Wm. G. Kruetz, 1767 Cemetery drive, on July 1, sold his greenhouses to Fred Burmister, his son-in-law, for \$2,500. One store facing Cemetery drive, and another, Ravenswood park, and 15,000 feet of glass are on the premises. Mr. Kruetz had a lease on the place which was also turned over to Mr. Burmister. Business has been very good, he having cleaned out the entire stock of bedding plants. Mr. Kruetz and wife will leave in two weeks on a trip through the northwest.

F. G. Mueller, 329 E. Thirty-fifth street, has a fine window display of Boston ferns. Mirrors form the background, and when the lights are turned on in the evening the place seems fairly ablaze. Cut flowers are placed in the window in the evening, and these, in connection with the ferns, make a fine showing. Gas was formerly used for lighting purposes, but electric light has lately been substituted.

Mathias Mann, of Zech & Mann's greenhouses, 5504 N. Clark street, is busy throwing out the old stock of carnations and will start replanting on Monday. Mr. Mann has 25,000 plants and these are in fine condition. The range at Niles Center that was used for vegetables last year, will be used for carnations this year.

Alex Newitt, formerly of the J. B. Deamud Co., has been in the city this week. Mrs. Newitt and family are in Joliet with friends on a vacation. Mr. Newitt is now connected with the Stuppy Floral Co., St. Joseph, Mo., and Will Jones of the same company is also in the city.

Florist Knight Templars all over the country should keep Chicago in mind for the annual conclave August 8-13. Vaughan's Seed Store is inviting customers to make its Randolph street establishment florists' headquarters during the conclave.

Mrs. Minnie Russler, for many years in the florist business at Roseland, died on Sunday morning from cancer. July 21 is the date of the funeral and anyone wishing to send flowers should deliver them to 11217 Michigan avenue, Roseland.

Henry Hansen, 1742 Cemetery drive, has had some new benches installed in his houses. Everything is in first-class condition, the chrysanthemums being far advanced for the season.

The meeting of the Horticultural Society has been adjourned to August 2 at the Art Institute at 2 p. m.

Chas. Schlieff, 5657 E. Ravenswood park, is busy planting. Four benches of mushrooms will be put in, these

having proved a paying proposition during the past year.

August Lange, with Mrs. Lange and Master Lange, left for Omaha, July 18.

Fred Adolph, Rogers Park, has gone to Switzerland for three months.

### Chicago to Rochester.

The Chicago Florists' Club has arranged with the Lake Shore & Michigan Southern railroad for transportation to the Rochester convention as follows:

A special train will be provided, same to be counterpart of the Twentieth Century Limited and to consist of combination baggage and buffet car, one of the famous Lake Shore diners, as many as 12 sections and drawing room sleeping cars (compartment cars if desired) as may be required to properly take care of the party and give everyone plenty of room, the train to be finished off with either an open section or compartment observation end sleeping car. The train will leave Chicago at 5:30 p. m. Monday, August 15, arriving in Rochester at 9 a. m. Tuesday, August 16.

The rate authorized for this occasion is one and three-fifths fare on the certificate plan, \$13.38 going (passengers to be sure and ask for certificates in purchasing their tickets, for on same will depend their being able to secure the reduced rate returning) and three-fifths of that or \$8.10 returning, making a total of \$21.48 for the round trip. The Pullman rates are as follows: Double lower berth or upper berth, \$3; section, \$6; compartment, \$8.50; drawing room, \$11.

Delegates from St. Louis, Indianapolis, Louisville, Cincinnati, Columbus, etc., can join together and arrange for special sleepers to be attached to this special train at Cleveland, thus bringing all together at that point for the remainder of the journey, Cleveland to Rochester. As to the Detroit people, it would be a very easy matter for them to join the special train at Toledo. The St. Louis people could come via Chicago and join this special train if they so desired as the same rate would apply through Chicago as via the direct line.

G. K. Thompson, general agent passenger department, will accompany the party for the purpose of seeing that everything goes smoothly. For further information and reservations, address G. K. Thompson, 180 Clark street, corner Monroe (Telephone, Harrison 7600), or E. F. Winterson, 45 Wabash avenue (Telephone, Central 6004).

A cordial welcome is extended to any outside florists' clubs, who may wish to join the Chicago Florists' Club special train for the Rochester convention of the S. A. F. Those who wish to be requested to communicate with L. A. Winterson, secretary of the Chicago Florists' Club, 45 Wabash avenue, stating how many will join in order that proper accommodations may be provided.

Long Distance Phone Central 3155.

Davenport, Ia.

Summer quietness and intense heat have been the rule for the past two weeks, and in consequence trade has been very quiet with very little doing outside of funeral work and very little of that; just enough to make one wish he didn't even have that, as all are more or less affected with that tired feeling that comes with the hot weather and nothing much to do. Roses are scarce and of poor quality. Carnations are in poor shape. Sweet peas are about done and gladioli are making their appearance. There are no outdoor flowers, owing to six weeks of drought with the glass at 90° every day during that period.

The sixth annual picnic of the Tri-City Florists' Club was held July 14, at Bettendorf and, in spite of the threatening weather, florists and their friends, to the number of 40, took advantage of the outing and all had a fine time. Many more would have been present if it had not been for the downpour that took place at about noon, when about three inches of rain fell within an hour, putting the picnic grounds in such a condition that the baseball game and other sports were declared off, much to the disappointment of the younger folks. Nevertheless, all were glad to see it, as rain was badly needed, this being the first to speak of for nearly six weeks. During the storm the picnic party enjoyed themselves playing pool and other games in the large hall, and many an old florist proved that the growing of flowers was not the only thing they could do well. Of course, the main thing at a picnic is the eatables and other refreshments. Dinner was serv-

ed in a large dining-room on the grounds and, as Uncle John says it was swell, it needs no further comment. Supper was also served at the same place. In the afternoon the party was shown through the large Bettendorf shops—the largest of their kind in the world—the manufacture of steel cars). This trip was very interesting, as the members of the party saw how steel is made and then worked into the finished article. One of the main buildings is 2,700 feet long and this will give an idea of the magnitude of the works. The regular monthly meeting was also held in the afternoon, but outside of routine business and the introducing of a new member, all else was laid over to the next regular meeting.

Louisville.

The Louisville Trust Co. has charge of the selling of the Anchorage Rose Co. property and has put the place in care of F. Walker & Co. who have placed one of their men in charge of it.

A. Rasmussen has his new greenhouses all up and ready for the glass. He has invented a new gutter and is using it in his new houses. It allows the water to escape every eight feet.

Nelson Wooden, who was foreman for many years for John Bohman, has bought the Thompson greenhouses and is busy getting them in order for next winter.

The proprietor of the Idlewild Greenhouses was a recent visitor and had photographs of window displays that set the retailers here thinking.

Jacob Schulz has a window decoration showing a miniature lake, a stream of running water and old mill, a water wheel and real live little ducks.

The Anchorage Rose Co.'s property has not been disposed of. It was Geo. R. Thompson's place that Mr. Klein-starink bought.

This has been the rainiest season in this locality we have had since 1875. Rain, rain every day for the whole month.

Reynolds & Struck are building two houses, each 22x10 feet, and adding 40 feet to a greenhouse already built.

Mrs. Chas. Rayner and family left for Seattle, Wash., this week to join her husband.

W.

### Dust Prevention and Road Preservation.

Experiments were made during the summer of 1909 at Washington, D. C., Youngstown, O., and Ithaca, N. Y., with different preparations for the prevention of dust and the preservation of roads. At Washington, waste sulphite liquor was used on a macadam driveway subjected to light traffic. Sulphite liquor is a dense, sticky liquid produced in the manufacture of wood pulp. It was applied in mixtures with water in varying proportions. The results show that it has but little value as a permanent road treatment, but that in concentrated form it may be classed as a temporary or semi-perma-

nent dust preventive and road binder.

At Youngstown, blast furnace slag was used alone and in different combinations with lime, sulphite liquor, and tar to determine the best method of utilizing slag for road construction. While sufficient time has not elapsed since these experiments were made to show definite and permanent results, it is believed that they will be valuable in determining what combinations will produce the best road.

At Ithaca, tar, oil, artificial asphalt preparations, brick, cement, and slag were used with varying results. All of these experiments are fully described, with results produced in each case, and a report on experiments formerly made, in Circular 93 of the Office of Public Roads, Department of Agriculture, Washington, D. C.

ST. JOSEPH, MO.—J. Fred Terhune of Savannah was made defendant in the federal court, July 11, in an involuntary bankruptcy suit, filed by three creditors; the American Casket Co., claim \$400.98; Stuppy Floral Co., claim \$177.10; J. M. Hutton & Co., claim \$131.96. The petitioners allege that Terhune committed an act of bankruptcy April 10, when he transferred to the Bank of Savannah property worth about \$9,000. It is said that the bank had a claim for \$9,000 against Terhune.

## St. Louis.

### BUSINESS QUIET.

The weather continues very warm with frequent thunderstorms and showers. Business is very quiet and many are taking advantage of the dull time to take their vacations. As-ters are improving in quality but no first class stock has been seen here. Some good lilies are in. Roses are coming in small. Many carnations have a very sleepy appearance. Some well colored American Beauty roses arrived and are selling fairly well. Gladioli are plentiful and cheap, many taking advantage of this and stocking up their show windows with very pretty displays. Quite a few of the florists will give their employees a holiday next Thursday. Picnic day badges and invitations have been mailed to each and every florist so a good attendance is expected.

### FLORISTS' CLUB MEETING.

The Florists' Club met last Thursday afternoon; 30 members were present, with Geo. Windler in the chair. All the officers were present except John Connon, vice-president, he being in Canada with his wife, and Will Smith, treasurer, who was attending the Elks' convention at Detroit. A. J. Bentzen, president of the picnic committee, reported progress and that everything was in tiptop shape for the picnic. The bulletin committee, through C. E. De Wever, reported that at its committee meetings all members were in favor of the issue of the bulletin and after a thorough debate by the club it was put to a vote and decided to issue the bulletin and continue the same committee to issue it. The transportation committee of one, J. J. Beneke, had several men present at the meeting to explain rates and routes to the convention city, \$20.40 round trip to Buffalo and thence to Rochester \$1.25 return ticket. A communication was read from the St. Louis convention bureau asking the club to join with them in asking the S. A. F. to choose this city as its next meeting place in 1911. H. A. Ehrach was elected to membership and Ed. Kelley, of the Kelley Floral Co., was proposed as a member. This closed the business session of the club. The chairman then called on Luther Armstrong, who was the club's first secretary 23 years ago, being the only one left of the first organizers, the others having passed away and living only in glorious memory. His talk was what the club was organized for. It was first called the Florists' Exchange and was for buying and selling, but is now termed the St. Louis Florists' Club. The present talked of issue of the bulletin will carry out the first plan of the organizers of this club. After a vote of thanks was extended to the

speaker he was elected honorary member of the club. The rest of the afternoon was spent in smoking good cigars and questions from the question box were discussed. The election of officers will take place August 11. The following gentlemen were nominated to office:

Geo. Windler, president;  
F. A. Weber, vice-president;  
J. J. Beneke, secretary;  
Will Smith, treasurer.  
E. W. Guy of Belleville, Ill., and A. G. Ahner of Kirkwood, Mo., were nominated 3-year term trustees.

### NOTES.

Alexander Geranios, for six years with F. H. Weber, will open up a fine store in the Metropolitan building, Grand avenue and Olive street. Mr. Geranios is a good designer and has had opportunities to show his skill during his stay with F. H. Weber as a decorator.

C. Young & Sons Co. met Wednesday at their store, 1406 Olive street, and the following were re-elected as officers: J. Young, president; Harry Young, vice-president; Will Young, secretary and manager; Chas. Young, treasurer.

A visit to Messrs. Seeger and Kingsley of the Mullanphy Flower Co. found

these boys very busy. They have not experienced much dull business and have a steady, regular trade.

Mr. Zimmer, at Biddle market, is still at the old stand. Others have come and gone but he is a fixture; he says, though trade is very slow just now.

Mrs. Geo. Angermueller is at North Pueblo, Colo. She will stay in the mountains a while and visit Denver.

The Ladies' home circle will meet at John Steidle's, Olivette, July 28, being entertained by Mrs. Steidle.

Mrs. Myers is still kept busy, although most of her customers are away.

Mrs. Stewart has closed her candy and flower stand at the Planter's hotel.

J. P. McPherson, of Litchfield, Ill., was a visitor here the past week.

H. G. Berning and wife are away, traveling in Mexico. W. F.

### St. Louis Horticultural Society.

The St. Louis Horticultural Society gives notice hereby that in addition to the regular lists of premiums offered for the fall show, which will be held in the Coliseum, November 8, 9, 10, 11 and 12, the following special prizes are offered for:

Best display of roses.....\$500  
Best display of chrysanthemums.. 500  
Best display of carnations..... 500

The addition of \$1,500 in prizes is made possible through the citizens' committee, who, under the leadership of Capt. Robt. McCulloch, are co-operating with the Horticultural Society and will give St. Louis one of the greatest flower shows ever held. All growers throughout the center states and the east are urged to stimulate the offering of prizes in such liberal quantity by prompt and liberal entry in the above classes. Prospective exhibitors will please apply for spaces required and further particulars to

OTTO G. KOENIG, Sec'y.

## New York.

## TRADE VERY DULL.

The business of the past week has been, if anything, poorer than the week previous, which was one of the worst ever experienced in the memory of some of the oldest florists. Roses are arriving in poor condition and although they are gradually thinning out they do not move any faster. Carnations are still very plentiful but of poor quality. The unusual spectacle was witnessed the other day of a dump cart backed up at the door of a certain wholesaler into which were being dumped thousands of unsalable stock, while the street urchins fought furiously with one another for the pick of it. Lilies are arriving in large quantities, and of fairly good quality, but are not bringing any price, some selling as low as \$1 per 100.

July 18.—A considerable thinning out of carnations, also roses, has been noticed today, with a slight increase in the demand and also in price. A few dahlias have arrived, but are in poor condition, owing to the extended drought. Orchids are rather scarce, good ones bringing as high as 75 cents each, while good lily of the valley is selling for three cents.

## NOTES.

Louis Rossow, with A. van Praag, 4 W. Fortieth street, has just returned from a trip to the Thousand Islands, where he has been spending his vacation with his oldest daughter and son, and reports fine pike, pickerel and bass fishing.

The Paterson Floral Co., which was burned out at 304 Main street in the fire of June 27, is now located at 227 Market street. The firm name has been changed to the Flower Shop, Stoutenborough & Smith, proprietors.

Geo. Saltford, the well known wholesaler, has removed from 43 W. Twenty-eighth street to more spacious quarters at 129 W. Twenty-eighth street, adding another to the list of wholesalers now west of Sixth avenue.

Cross & Brown Co. has leased for a term of years to the Boston Florist Co. the store and basement in the Knickerbocker Trust building, at the northwest corner of Fifth avenue and Thirty-fourth street.

We are glad to be able to announce that A. Warendorf, Broadway, who has been seriously ill for the past four months, has fully recovered and is now able to attend to business as usual.

Margaret Gruenig, at one time with A. Warendorf on Broadway but now with the Fleischman Floral Co., Chicago, has spent two weeks in the city and vicinity with old friends.

The Greek-American Florist Supply Co., Geo. Cotsonas & Co., proprietors, will open, about August 1, under the management of Andrew Cora, with a full line of florist supplies.

J. Fenrich and C. H. Totty have postponed their European trip indefinitely, owing to an accident to Mr. Totty while automobiling last month.

The Pennock-Meehan Co., Philadelphia, have leased a store in West Twenty-eighth street which it will occupy in the near future.

C. Hopkins, with A. J. Guttman, is spending a few days with his folks in Maine and is expected back at his desk about July 20.

M. C. Ford, W. Twenty-eighth street, has just had completed in his new store a fine new metal ceiling.

Arthur Hunt, with A. H. Langjahr, is spending his vacation in the mountains with his family.

## Glen Cove, N. Y.

The regular meeting of the Nassau County Horticultural Society was held at Pembroke hall, July 12. Two new members were elected and two applica-

tions received. It was sweet pea night and Messrs. Marshall, MacKenzie and Holloway acted as judges. For the best 24 varieties, G. Ashworth was first; best six varieties Spencer type, I. McDonald first; arranged for effect, G. Barton first, with a splendid basket arrangement around a cane with ferns greatly admired by everyone. A cultural certificate was awarded to Fr. Petroccia for celery and honorable mention for sweet peas. A silver cup was offered by Stumpp & Walter for our fall show. Mr. Farquhar of Boston will give us an illustrated lecture on "Gardens of Italy," at the next meeting, September 14. Our annual outing will take place at Oyster Bay on August 3, and we are promised a grand old time. Next meeting will be aster night and prizes will be given for best 12 white, 12 pink and 12 any color, also a special prize for best 24 white, given by M. Matz. O. E. A.

of checks in the past three weeks without any money to cash them and to have made several local men quite anxious for a time, among them two furniture men, a music dealer, a telephone manager, and several others. The police, almost to a man, and many others have been given flowers, and his gifts have gone likewise into several other directions without any apparent cause for giving them. The wife he married less than a month ago has left him. He secured her, it is claimed, through an advertisement, and married her in a few minutes after he secured the introduction. Referring to the above, W. R. Rieman writes, under date of July 18: "This man claims Augspurger, of Peoria, Ill., as an uncle and says he came from Little Rock, Ark., about a month ago. He is now 'non est,' and the express company reports goods sent C. O. D. have not been taken up and had to be returned."

OUTING OF THE GREEK-AMERICAN FLORISTS' ASSOCIATION, JULY 7.

The Greek Committee at the Dock.

## Vincennes, Ind.

Edward Schultz, who recently rented the greenhouse of T. C. Dunn, at the corner of Day and Eberwine avenues, and engaged in the business of a florist under the name of the Vincennes Floral Co., assaulted Mr. Dunn recently, knocking him down and giving him a black eye. Dunn filed charges the next morning and the police have been looking for Schultz ever since. Schultz has filed the same kind of charges against Dunn in the court of a local justice of the peace, where a plea of not guilty has been made.

Schultz is a peculiar character and has made enough history in the past two weeks to fill several newspaper columns. The trouble between him and Dunn was over the renting of the greenhouse. Schultz is alleged to have issued several hundred dollars worth

## As Others See Us.

The florists have a trade jargon of their own. When a man who grows flowers for a living rattles off some thing like "Paper Whites, valleys and Romans," the confused layman has to stop to think what the jumble of words means. It is only the trade way of saying Paper White narcissus, lily of the valley and Roman hyacinth. Likewise "mum" is their word for chrysanthemum, and time and space are likewise saved by saying "cyp" instead of cypripedium. So Bridesmaid roses are "maids," American Beauties are "beauties," Perle des Jardins becomes "perle" and is pronounced pearl, while Souvenir du President Carnot is reduced to its last word, just as those other illustrious French rose names, General Jacqueminot and Marechal Niel were shortened to "Jack" and "Niel" in the heyday of their glory.—New York Press.

Rochester, N. Y.

At the meeting of the Florists' Association, held in the association's club rooms in the Cutler building, July 11, plans for the convention of the Society of American Florists, to be held in this city August 16 to 19, inclusive, were discussed.

President F. W. Vick presided and Charles H. Vick, superintendent of the trade exhibition, reported that already practically all of the 40,000 feet of floor space had been assigned. W. H. Dildine proposed that the society divide the city into districts and offer prizes for the best kept lawns. The scheme has been tried with success in Toronto and other cities. Should it be decided to adopt the scheme the association will confer with the chamber of commerce as to details.

A committee composed of W. H. Dildine, chairman; R. G. Salter and A. R. Luetchford was appointed to investigate the possibilities of the plan. Mr. Luetchford, who leaves for Canada late this week, will confer with the mayor

Sugar-Beet Growing in England,

Consul Albert Halstead writes from Birmingham that serious consideration is still being given in the English midlands to the proposition for growing sugar beets and establishing a factory. A meeting was held recently at Droitwich to this end. Some Dutch manufacturers have been contracting with farmers in eastern England to supply beets for sugar mills in Holland.

SUMMER QUIETNESS.

The severe drought has been broken and there is a let-up of the tropical spell which has brought discomfort, sickness and death to many. We have had fine showers and the withered crops already begin to show growing powers, the water courses which were being depleted to increase in volume, and humanity to put on more cheerful looks. We seem to be in the center of trade's summer stagnation. Some of the up-town stores are closing doors for a recess, and with all the working hours are reduced. The supplies of cut flowers are less in quantity and inferior in quality, as is natural, but the supply quite equals the requirements of business, which, as usual, is limited to funeral work.

## NOTES.

The Sun had in its pages a few days ago a reproduction of a photograph of what it styled a "landmark" of the city, its oldest existing greenhouse, that of C. A. Fox, on the corner of Bolton and Dolphin streets, which, it stated, was quite 50 years old. The old buildings, which include a residence as well as the greenhouse, are about to be razed and modern structures erected in their place. It is quite certain that the greenhouse is as old as the Sun says. It happens that your correspondent lived a good many years ago on Linden avenue and some of his windows looked on this structure, and Mr. Fox (who, we believe, still lives at a ripe old age) was occasionally engaged to do work in his garden; following the custom of that day. The structure was of the type which has become obsolete, narrow glass, flat roofed, and heated by the old-time brick flue. But the point of interest is, that greenhouses are not so transitory as they are computed. It has become the custom, we believe, to assume that the life of the material of a greenhouse is about 10 years. (This not, of course, the modern structures of cement, iron and cypress, which it is claimed are practically indestructible.) Yet here is a house, certainly near 60 years old, which is still standing—even if not very erect—and after much patching. So, also, some years ago your correspondent bought from a private place the material in a large greenhouse which was constructed during the civil war. When the carpenters began to work it up for the purpose it was destined for, they de-

the lordly Chesapeake. The launch was small, the wind was not too gentle, and the waves were choppy. Soon one of the company was observed to have a pallor quite unsuited to the bronzed greenhouse worker and to be manifestly very ill at ease. The commander shouted to him, "Mack, let it go, you'll be the better for it—but look out for your teeth!" The advice was promptly taken, but its recipient, turning his agonized look on the captain, rejoined, "By heaven, they're gone!"—and so they were, in 40 fathoms of water.

The Home Garden Committee of the Municipal Art Society has begun its examination of the window boxes offered for the contest for beauty and good culture. The boxes are very numerous and are scattered over the whole city, and will be judged with much detail and system. The backyard gardens will be judged in October. The entries in this class, naturally, are hardly so numerous, but a good deal of interest is shown, and the result cannot but be felt in the adornment of homes and in the stimulus to the trade.

S. B.

PHILADELPHIA, PA.—J. W. Colflesh, Woodlawn avenue and W. Fifty-third street, will rebuild his greenhouses.

NEWARK, N. J.—The Greenhouse Construction Co., Inc., having its registered office at 143 Nelson street, Bloomfield, filed articles of incorporation on July 15. The authorized capital is \$125,000, of which \$1,000 is paid up. The incorporators are: E. J. Forhan, G. F. Martin and H. P. Jones, all of New York.

FAIRPORT, N. Y.—The Floral Society has announced its sixth annual carnival and flower show to be held in the First Methodist church, August 25-26. More than 100 premiums are to be distributed to the winners in the four sections, which are: Professional, amateurs, parade and fancy work. Entertainments are to be given both evenings of the carnival.

clared that, after its 40 years' use, there was no lumber yard in our city which could duplicate the lumber. It was of white pine, clear, straight, without knot or sap, and having been kept well painted, was untouched by decay. The construction of that day was, of course, more like bridge building than the light and airy system of the present day. So, too, some sashes, three by nine feet, bought from the late James Pentland some 15 years ago and which had been used by him for over 40 years, discarded, re-used, again set aside, and finally sold to the present owner for a trifle, are still occupying a place on the north roof of a greenhouse (not a very light one, true) but apparently as good as some other sash not 10 years in commission. The old adage was "there's nothing like leather," but it would seem that for wear and resistance there's nothing like the old-time white pine, which has practically disappeared from the surface of the earth.

The street cleaning department of the city has been using a weed-killer, which in efficiency and promptness is all that can be expected, as is claimed, though the owner of a flock of ducks which were allowed to run at large and forage in the gutters of a certain section, thinks it is too "killing," since every duckling who came in contact with the mixture was destroyed, to the indignation of the owner, who claims so dangerous a mixture should not be used. The liquid is described as a mixture of bicarbonate of soda and arsenic. A 20 per cent solution of the two chemicals is diluted with 40 times its bulk of water, and the weeds to be killed are sprayed with the mixture. If the weeds are very high, they are mown down first. The liquid is applied over the ground and the roots are destroyed. The street cleaning people say without such a composition it would be impossible, except at great expense, to remove weeds from the streets, and that, as it is only used in solution, there is no danger of humans getting any of it. Of course, chickens or ducks roaming at large might drink some of the water leaking from the street sprinklers. The health department comes to the conclusion, therefore, that the mixture may be continued in use. If its composition is given right, it may be worth knowing.

Some of the members of our craft (and of the bowling team) went out last Sunday on a launch voyage on

Atlanta, Ga.

Business has been very good the past week in all the stores. Everything was cleaned up by Saturday for the funeral of Col. Draper, a well-known business man of this city. The rain of the past two weeks has ruined nearly all outdoor flowers. West View and Atlanta Floral Co. had a big week of out-of-town shipping. The Dahl Floral Co. had a big society wedding at Washington last Thursday. With Hollinsworth and Nunally business is very good. Nunally has opened a beautiful store and has an elegant display window, making three in all.

Why have we not got a florists' and gardeners' club like other cities? We are ahead of other southern cities in other lines, why not in the flower business? Will somebody start?

The Newest Fertilizer.

Consul Henry B. Miller, of Belfast, quotes from an Irish journal an account of a process invented by a Dublin man for purifying the waste products of creameries and making them, instead of a nuisance, a source of profit:

"In rural Ireland one of the chief difficulties of the creamery system has been to get rid of the waste milk or 'wash.' Many methods which have been tried to get rid of this 'wash' have proved unsuccessful. A method which seems decidedly promising has, however, been discovered; one, moreover, which not only removes the waste, with all its attendant disadvantages, but apparently transforms it into a valuable fertilizer, thus conferring a double advantage. The efficiency of the method, in addition, is only equaled by its simplicity.

"On a barn floor is placed a heap of phosphate of lime coarsely ground; this heap is hollowed out as a mason would arrange his heap of sand when preparing to make mortar, and into the hollow is tipped the wash from the creamery. A shovelful of yeast is added, and after a few days the whole material is mixed and turned as in the making of mortar. The amount of wash available from the creamery at Ballyduff, where an experiment was made, was close on 100 gallons per day, and at the time of our visit the result was a grayish mass of damp material not unlike superphosphate in appearance. The effluent is neutral, and it might in all probability be safely run into a stream without causing any pollution. So far as could be seen the question of the removal of a nuisance had been solved, for here there was no nuisance of any kind. Of course, in active constant work at the creamery the process would be carried on in a proper system of filter beds.

"The question next arises as to what value the material possesses as a fertilizer. A sample of the damp material, on analysis by Sir Charles Cameron at the Dublin city laboratory, gave the following result:

|                         | Calculated     |           |
|-------------------------|----------------|-----------|
|                         | Per to         |           |
|                         | cent. dryness. | Per cent. |
| Moisture .....          | 27.00          | .....     |
| Total phosphates.....   | 52.78          | 72.30     |
| Phosphates soluble in 2 |                |           |
| per cent citric acid..  | 28.35          | 38.83     |
| Nitrogen .....          | 1.05           | 1.43      |
| Equal to ammonia....    | 1.27           | 1.74      |

"It will be seen that this result approximates somewhat to bone flour, the nitrogen being evidently derived from the milk. It worked out at the unit prices of \$13.40 for nitrogen, 43 cents for citric soluble phosphates, and 36 cents for insoluble phosphates, with

\$2.43 per ton for mixing. The value would be about \$26.76 per ton; but as the raw phosphate only would require to be conveyed to the creamery, a further saving in carriage and cartage of about \$2.43 per ton might be effected, and there would also be some saving in the cost of bags, as the raw phosphate would not damage these, and they could thus be saved over again. Hence, on paper at least, the material seems promising, and the only link required to complete the chain is a practical test in the field. This, however, has been arranged, and the progressive agricultural school of Trinity College, presided over by Prof. W. A. Barnes, Westland, Kells, who is a thoroughly practical farmer, has undertaken out-field tests with the material on the college farm at Westland. Here is a material which, from its analysis, should form a suitable fertilizer for turnips and which is capable of returning to the soil the phosphate of lime already removed in the milk, while at the same time the process of its manufacture transforms an evil-smelling, injurious waste product into something innocuous and possibly valuable.

Salt Lake City.

The usual summer quietness prevails in this vicinity at present with just about enough funeral work to meet expenses. On account of the severe drought all flowers are scarce and of poor quality in this market. Sweet peas are the poorest that have been seen here for a number of years. All outdoor stock is badly infested with red spider, thrips and aphids, which thrive in the absence of rain. Vegetables are nearly destroyed by the green aphid. Nearly every grower here and at Ogden is putting one or more houses in roses this season, something unusual for Utah, as it has been the opinion of most growers that roses could not be grown in this vicinity. It has been proven that roses can be grown here as well as elsewhere and now we all want a slice of the pie. From present indications we will not have to ship in flowers from outside states much longer as there has been a lot of new glass put up in this vicinity this season.

D. E. Law, who recently sold his interest in the Salt Lake Floral Co., will erect a new and modern range of greenhouses in the near future.

The Miller Floral Co. is planning to make a large addition to its place.

To Be Done Now.

IN THE GREENHOUSES.

Close stopping of fruiting cucumbers is necessary or a lot of useless wood and foliage will be made. Young plants, of course, will need more freedom.

Keep seedling stock of primulas, cinerarias and calceolarias as cool as possible in the frames or houses, shade lightly and allow abundance of air.

A coat of paint inside the greenhouses not only improves their appearance but destroys hundreds of insect eggs and fungus spores.

Spraying with nicotine in bright weather and sprinkling with tobacco powder when dull are the readiest methods of destroying black fly in chrysanthemums.

Make a couple of sowings of pansies in a frame or on a bench for winter flowering. Purchase the best seed of varieties suitable for cutting.

Remove the flower buds that appear on young carnation plants on the benches and attend regularly to the stopping of the shoots.

Allow fuchsias to flower now and feed the roots a little when potbound. The fuchsia is not, however, a very gross feeding subject.

OUTDOORS.

Asters should be copiously watered in the evening during this hot weather or the flowers will be poor.

There is no other manure so cooling and yet so effective in hot, dry soils as cow manure, and this should be used as far as possible.

Thin the growths on the dahlias. One or two good strong shoots will throw more flowers and better than a score of crowded ones.

See that all empty flower pots are gathered up, cleaned and put away ready for use when wanted, not left laying around to get broken.

Pots and boxes of stevia should be moved around occasionally to prevent rooting through too much, also any chrysanthemums or other strong rooting subjects.

Clean up the weeds and rubbish outside the houses and there will be less insects inside.

Avoid breaking or treading on the vines when gathering cucumbers or melons.

Budded rose standards should be allowed to grow at will in order to keep the buds of the rose dormant.

Thin the early endives and keep the cultivation going between the rows.

A good mulch of manure now will be of great assistance to newly planted rhubarb and asparagus.

Clean up and repair all empty flats as they will soon be needed for geranium cuttings, bulbs and other purposes.

St. Louis Notes.

A. W. Murray, who has had a busy season, stated he can take a buggy ride in the park once in a while with his wife now that the heated term has driven most of his customers away to the seaside resorts.

It was reported that Vincent Gorly, while bathing at Detroit, during his visit at the Elks' convention, was robbed of his clothes and had to escape in a barrel.

Ostertag Bros. are always busy. Last week large orders from outside were received for funeral work.

W. F.

## The Seed Trade.

### American Seed Trade Association.

E. L. Page, Greene, N.Y., President; L. H. Vaughan, Chicago, First Vice-President; M. H. Duryea, New York, Second Vice-President; C. E. Kendel, Cleveland, O., Secretary and Treasurer.

PEA growers talk about an average yield as low as three fold on this season's crop.

IN 2010.—Braslan seeded Europe 100 years ago, according to the daily press of that period.

H. A. JOHNS, of Sioux City, Ia., reports the pea crop in Alpena district about 50 per cent of an average one.

CHICAGO.—Prices on the board of trade July 20 for grass seed were noted as follows: Timothy, \$5 to \$6 per 100 pounds.

SOME of the inspectors from the Department of Agriculture report more favorably on the pea crops than do the growers themselves.

TUBEROSE crop reports from the growing districts are on the whole favorable, good rains having helped the crop, which needs cultivation.

HOUSTON, TEX.—The Texas Seed and Floral Co., of Dallas, will erect a \$75,000 four-story brick building, at Hawkins street and Pacific avenue.

MAJOR BRASLAN returned from Europe on the S. S. Kronprinzessin Cecile with Wm. Ellis Corey, John W. Gates, Martin Beck, head of the Orpheum circuit, Elbert Hubbard and others of lesser note.

VISITED CHICAGO: Chas. P. Braslan, San Jose, Calif., returning from Europe; Jesse E. Northrup, Minneapolis, Minn.; C. W. Scott, New York; A. J. Brown, Grand Rapids, Mich.; S. Y. Haynes, and H. W. Buckbee, Rockford; F. C. Sloan, Palo Alto, Calif.; H. A. Johns, Sioux City, Ia.; J. C. Robinson, Waterloo, Neb.

### Connecticut Seed Crops.

Milford, Conn., July 18.—Seed crops here are looking as well as might be expected, having just been refreshed by a very nice rain. The drought which had continued for about four weeks was becoming very dangerous, especially affecting corn, beet and onion. Sweet corn still needs to make very rapid growth if it is to mature properly before frost.

EVERETT B. CLARK SEED CO.

### Nebraska Seed Crops.

Waterloo, July 16.—Both sweet and field corn crops will average up well at present, although from 10 days to two weeks later than usual. The general stand of field corn is very good, with sweet corn about two-third stand as an average. Corn is so deeply rooted that it has withstood dry weather in some sections remarkably well, but has now reached a stage of growth when the plant requires considerable moisture, so that ultimate results will depend entirely upon seasonable weather.

With vine seeds the situation is somewhat mixed. In sections where rains have been general crops are excellent, and in other less favored localities crops are not so good, while at a few points they are almost failures, caused by dry weather. It is reasonably safe at present to report cucumbers fair to good; muskmelons will average around half a crop; watermelons prospects poor, but rains may improve conditions; winter varieties of squash only moderate, summer varieties generally good and pumpkin crops promise fair.

J. C. ROBINSON SEED CO.

Fremont, July 15.—According to last reports received from our growers, the outlook is generally favorable for fair to good crops, with the exception of a few varieties of corn and some vine seeds, also with the exception of watermelon crops, which have not been doing well on account of dry weather causing partial stands in some cases and late planting in others, while a few growers have not planted their acreage as they deemed it too late when they had rain. We hope for fair crops of most varieties of watermelon, but may be short of some.

WESTERN SEED & IRRIGATION CO.

### Iowa Specialties.

Muscatine, July 15.—Peppers were damaged some by wind and sand storms followed by drought, which was broken July 9 by a heavy rainfall. Since then they have pushed ahead rapidly and we now hope for a fair crop of seed this fall. The demand for asparagus continued so late this spring the fields were cut longer than usual, hence we do not think there will be over 60 per cent of a seed crop this year. Cold weather in May held the melons back so that they will be about 10 days late but promise well so far. We grow no tomatoes but the Earlianas, which promise a full crop. Rhu-

barb seed is very scarce, as the roots were injured by the severe winter.

J. E. HOOPES & Co.

### Michigan Seed Crops.

Jackson, July 16.—We have had two or three nice rains recently, which have very materially improved conditions. If these had not come, we would have been seriously damaged by this time. Nearly all the crops now look quite well and with favorable conditions from this on our yields will be fully up to the average.

S. M. ISBELL & Co.

Grand Rapids, July 15.—Pea crops will be very short if not worse than a year ago. As for beans, those that were planted early got a good start and are looking very good; the others have been struggling along and looked very bad before the rain we had a few days ago which has helped some, but we need more rain. The weather is intensely hot, but not detrimental to beans provided they have enough moisture.

ALFRED J. BROWN SEED CO.

### Long Island Cabbage.

Hempstead, July 16.—Cabbage seed which promised a full crop has gone back some and if the present drought holds long may cause some shortage. Cauliflower and cabbage farmers are anxious for rain.

FRANCIS BRILL.

### Michigan Peas.

Alpena, July 16.—We have had a few showers recently that have helped some of the pea crops, but we have many poor yields and failures, so that our crop on the whole will be very light.

ROGERS BROS.

### The Non-Warranty Clause.

WALLACE SONS & WELLS VS. PRATT & HAYNES.

This case was an appeal from a judgment of Justice Bray. The dispute arose from a sale by Pratt & Haynes to Wallace, Son & Wells, of 27 qrs. of sainfoin described as common English, which afterwards proved to be Giant sainfoin. The plants differ in the following respects: Giant sainfoin is coarser and grows taller than common English; it does not cover the ground so well; if allowed to do so it comes to seed twice in the year, and is little, if any, use for feeding purposes after the third year from sowing. Common English sainfoin, on the other hand, tillers out better. It only seeds once in each year, and lasts for six, seven, or even eight years. By reason of the above differences the price of common English sainfoin seed is about 10/—a quarter higher than that of Giant sainfoin seed. It was contended by claimants that the condition on sold note and invoice did not protect the respondents, the difference between English and Giant sainfoin being one of "kind" and not of "quality." Respondents contended that the difference was merely one of description, and also that the sale being by sample was a complete defence. The court allowed the appeal, Lord Justice F. Moulton dissenting.—Horticultural Advertiser (English).

### Imports.

During the week ending July 16, imports were received at New York as follows:

Vaughan's Seed Store, 531 cases lily bulbs.

### GIANT PANSY PLANTS

#### The KENILWORTH Strain

Must not be compared with the flimsy Trimardeau. It is much larger and of good substance, the immense flowers of 3½ to 4 inches are of perfect form, every tint and shade is produced in striking combinations and endless variations of beautiful colors and marking; it is the result of years of selection. The stock plants are selected from many thousand of plants grown for market. It is rich with shades of brown, bronze, red, mahogany and numerous other light, medium or dark mixtures.

#### 1910 Seed Now Ready.

2000 seeds 50c; 5000, \$1.00; ¼-oz. \$1.25; 1-oz. \$5.00; 1 lb. \$50.00. Also the following colors of the Kenilworth strain: yellow, yellow-darkeye, Lord Beaconsfield, Mme. Perret, white darkeye, purple, black, masterpiece, red, brown, bronze, dark-blue and light-blue shades. Trade packets 25c, any five for \$1.00. 12 packets one of each variety \$2.25.

**Rainbow** is a blend of over 50 of the latest introductions of giant pansies of the most beautiful gorgeous colors; blotched, striped veined margined, etc. With every \$1.00 worth of Kenilworth strain I will send 1000 of Rainbow free, and with other amounts in like proportion.

## Market Gardeners

### Greenhouse Vegetable Growers and Market Gardeners' Association.

C. W. Waid, New Carlisle, Pa., President;  
Franklin DeKleine, Grand Rapids, Mich.,  
Vice-President; S. W. Severance, 508 Illi-  
nois Life Building, Louisville, Ky., Secre-  
tary; M. L. Ruetenik, Cleveland, O., Treas.  
Annual meeting at Grand Rapids, Mich.,  
Sept. 27-29.

CALIFORNIA cantaloupes have sold remarkably well this season and not many more will be shipped this year.

VISITED CHICAGO: Fred Meyer, J. Hohlt and August Maschmeyer, all of Indianapolis and vicinity, enroute to the west coast.

SPOKANE, WASH.—W. H. Acuff, president of the Washington Mill Co., and J. C. Neffeler, a practical greenhouse man, have built several new greenhouses and intend to go into the indoor vegetable business. A sprinkling system has been installed and a concrete reservoir is to be constructed at an elevation of 50 feet in the nearby hills to provide water pressure.

CHICAGO.—R. F. Dilger, 6058 N. Clark street, is busy with his cucumber crop. Cucumbers are bringing \$1.25 a case. Last year his crop amounted to over 6,000 dozen. The opening of the market was poor, but in June and July was better than in former years. Mr. Dilger was appointed vice-president of the Greenhouse Vegetable Growers' and Market Gardeners' Association for the state of Illinois. He received his appointment about six weeks ago. His residence has been repainted and everything about the place is in first-class condition.—The Greenhouse Vegetable Co., 143 Water street, have had a good season's business and are on a good paying basis at present. It was heard on good authority that several of the other vegetable growers will open a store some time in the near future, so they will be able to take care of the fall planting.—Vegetable growers are making preparations for the coming season, clearing out and putting in new soil. Some of the growers have thrown out their summer cucumbers and have already put in a crop of Grand Rapids lettuce.

### Market Gardeners' Association.

The third annual convention of the Greenhouse Vegetable Growers' and Market Gardeners' Association of America will be held at Grand Rapids, Mich., Tuesday, Wednesday and Thursday, September 27, 28 and 29, and promises to be the most successful ever held by that organization. A splendid programme is being prepared and subjects of interest to the vegetable forcer, market gardener and truck farmer will have a place in it. Grand Rapids is the home of Grand Rapids lettuce and Davis Perfect cucumber, and the convention will afford an opportunity to visit the famous forcing establishments in that city. Any vegetable grower desiring further information should write to S. W. Severance, Secretary, 508 Walker building, Louisville, Ky.

### Notes on Celery.

Few crops are handled under such widely varying methods as celery. Nearly all important crops have gradually been brought to a system of culture, this to such an extent that we may go far and find about the same methods in use. Celery is an exception. In one section we find growers believe in one cropping only, that is, the land is given up to celery entirely and the one crop is all that is expected. In another part, celery is intercropped; still another section, celery is used as a second crop, and the methods of planting vary from rows six feet apart to six inches apart, from level planting to setting into deep ditches. Also the bleaching is accomplished by widely varying means. Some use boards, others paper, some tile and the bulk bank with soil.

The time of planting is also varied. In the northwest an old grower will tell you what is not set out in June is worthless. Moving a little east this is modified to July 4, and so on down to August 15. Thus it is if one reads cultural methods he must not blindly copy them, but try and study out his own conditions. At this time of the year the planting is what mostly interests us, and we will consider it more closely. The time of the year to set celery depends more upon the kind of plant procurable and the moisture at hand. Thus if we have strong healthy transplanted plants, rich soil and ample moisture, August 1 will do in many localities. However, where moisture is likely to be deficient, we must plant earlier, to give the plants ample time to root into lower regions for support during hot spells. This is the main reason for failure on late plantings. The ground will dry out below the root line of our plants when they are either destroyed or stunted. Thus we have often hand watered rows of late planted celery, for a week or 10 days, having to draw the water with a team of horses.

The distance for rows is decided by the method of bleaching. Where boards are used, two feet will do, and six inches in the rows. Where the celery is intended to bleach itself, beds are set six inches by six inches or eight inches by eight inches. Where soil is used and the celery trenched, three and one-half feet to five feet is generally allowed. Where celery is wintered where it grows, double rows are often planted six inches by six inches and then 10 or 12 feet between to permit hauling litter for covering. Ground banking is not advisable for early celery, as the weather must be cool for this method, and tile, paper or lumber is unsafe for the late crop, owing to sharp freezes penetrating too deeply.

MARKETMAN.

### Packing Fruits and Vegetables for Market.

No fruit or produce dealer or experienced shipper will contradict our statement that the proper selection of fruits and vegetables and packing are by all odds the most important features of successful market gardening and profits in shipping products to market. The minutest detail about a crate or box gauges at once the selling price; the style of box, the bright appearance of the new wood, the neat and proper

## Success In Market Gardening

REVISED AND ENLARGED EDITION.

A new and larger edition of this well known work on market gardening. It contains everything a market gardener wants to know, and in a form easily understood. It is an invaluable guide to any one in the business from the beginner to the most experienced.

marking, the careful and substantial nailing are all features which produce pleasant impressions in the eye of the buyer, because they denote a careful and cautious packer.

The shippers of California could never have crossed the continent of nearly 3,000 miles to market with any hope of profit if it were not for their scientific packing. All means are exhausted to make every package look as attractive as possible. Who has not admired and was tempted to buy the inviting rows of pears, peaches, apricots, cherries and grapes as seen in our fruit stores in the exposed California fruit packages. They should convey a lesson to every observing shipper. Then, again, very little, if any, deception is practiced by topping off the top with the best; the California package will average good all the way to the bottom and this is most praiseworthy and commendable.

Every shipper has the privilege to make his shipments look attractive by topping with nice fruit or truck, but when this is done for the purpose of deception he deceives only himself. Every strange brand or mark is carefully examined to the very bottom by the buyer before purchase is made, and it is no advantage or benefit to even attempt to deceive the customer for your goods; even should you succeed for one time, the buyer will steer clear of your shipments the next time.

—Southern Shipper.

## Chicago Notes.

The stock arriving at the Poehlmann Bros. Co. is remarkably good for the season and some of the finest Killarney, White Killarney, Cardinal and Beauty roses seen on the market this week have been shown here. Good valley and Harrisii lilies are also to be seen and the carnations are better than could be expected now. While the amount reaching the store is not as large as it was, owing to the benches being emptied and replanted at the greenhouses, there is plenty for all and trade keeps up remarkably well.

The Fleischman Floral Co. has been busy with funeral work and on Monday had a lot of work at De Kalb for the Elwood funeral, having to send a man down to superintend the arrangement of the large number of wreaths, sprays and other designs. Miss Margaret Gruenig returned on Monday from her eastern trip and reports having the time of her life among her friends at New York and Buffalo.

H. W. Rodgers of Welland & Risch has returned from his vacation at Pentwater, Mich., where he spent the last two weeks taking trips on the lake and resting up. J. P. Risch left Tuesday for Silver Lake for a couple of weeks' fishing. Business is fair and the young stock at the greenhouses is in fine shape. They expect to cut roses from young stock in about 10 days.

Summer roses continue to be the principal offerings at Bassett & Washburn's, good Beauties, Kaisersins and the two Killarneys being leaders. E. B. Washburn is now settled down to work at the store. He looks extremely well after his western trip and speaks in glowing terms of the country out there and the enjoyable time he had.

The latest improvement at E. H. Hunt's is the installation of a new telephone switchboard for long distance work which will, when completed, give three lines for outgoing and three for incoming business, six in all. This has become necessary owing to increasing business along all lines.

Peter Reinberg's stock continues in excellent shape for the season and there is plenty coming in. Perle and Uncle John roses are fine, and American Beauty still arrives in quantity. Mr. Reinberg is still in the west. Miss Corbett of the office force here is away on her vacation.

W. H. Kidwell came to the city from his summer home at Eagle Lake, Mich., on Monday, but left again on Tuesday evening, taking J. B. Deamud with him for a few days' vacation.

J. H. Burdett, secretary of the Horticultural Society, has been elected secretary of the South Park Board and will assume his duties August 1.

J. B. Deamud is at Hotel DeKidd, Eagle Lake, Bloomington, Mich.

## BOWLING.

The hot weather took all the starch out of the bowlers and the competition to make the team that will represent the Florists' Club at Rochester next month has not proved a sufficient magnet to draw the boys to the alleys. Last Friday night four men went over to Brill's alleys on the west side and rolled the regulation three games with the following results:

|         |     |     |     |
|---------|-----|-----|-----|
| Yarnall | 178 | 184 | 206 |
| Huebner | 180 | 200 | 170 |
| Graff   | 184 | 176 | 180 |
| Laidley | 168 | 172 | 165 |

The team that will represent Chicago at the annual convention will be chosen from the following men: Graff, Huebner, Asmus, Winterson, Vaughan, Yarnall, Fischer, and will be definitely announced at the next meeting of the club.

## Lilium Harrisii

Now Ready for Delivery.

Our first consignments have just reached us, and our advance orders are all filled. In view of the fact that crop is shorter than last year, we advise those who have not already ordered to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders. At present we have a good supply, and will be able to take care of early orders; but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer selected stock of the original true Harrisii for early forcing, grown from the original true stock—splendid stock for early forcing, for which purpose Harrisii is so valuable. Our stock is not picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

- 6 to 7-inch bulbs, 350 to the case, \$17.50 per case; less quantities, \$6.00 per 100.  
 7 to 9-inch bulbs, 200 to the case, \$18.00 per case; less quantities, \$10.00 per 100.  
 9 to 11-inch bulbs, 100 to the case, \$20.00 per case; less quantities, \$25.00 per 100.

WESTERN SPRINGS, ILL.

Visitors: C. Cramer of the Cramer Floral Co., Salt Lake City, Utah; Jacob Seitz, grower for the Butte Floral Co., Butte, Mont.; J. D. Carmody, Evansville, Ind.; J. S. Bitler, Kokomo, Ind.; Alex Newitt and Will Jones, of the Stuppy Floral Co., St. Joseph, Mo.; H. Greve of the Dallas Floral Co., Dallas, Tex., returning from the Elks' convention in Detroit; Alpha Elberfield, of the Alpha Floral Co., Kansas City, Mo.; B. F. Windler, St. Louis, Mo.; Wm. Fenniger, Toledo, O.; Harry Fisher, Kalamazoo, Mich.; E. M. Michel and wife, Covington, Ky.

STRATFORD, CONN.—The stock of the Fernwood Nursery Co. (B. J. Ezechel, president, and L. C. Bernheimer, treasurer) is reported in the sheriff's hands and will be disposed of shortly at sheriff's sale.

BATAVIA, N. Y.—A. M. Clough of the New York Central says that plans are under way for the erection of additional extensive greenhouses to furnish lawn decorations, palms and cut flowers for depots, etc., for a large section of the road. Greenhouses are now operated by the railroad at Evans street. One of the sites talked of for the new houses is on the east side of Cedar street and the other on Franklin street. Mr. Clough wished to make sure that water could be obtained for the Cedar street site. The greenhouses will be from 100 to 150 feet long. The plans are now being completed.—Thieves entered the greenhouse of Gustav Noack at 143 Bank street, July 14, and, opening a cash drawer, secured about \$10 in small change.

## The Nursery Trade

### American Association of Nurserymen.

W. P. Stark, Louisiana, Mo., President;  
E. S. Welch, Shenandoah, Ia., Vice-President;  
John Hall, Rochester, N. Y., Sec'y.  
Thirty-sixth annual convention to be held  
at St. Louis, Mo., June, 1911.

VISITED CHICAGO: C. C. Mayhew, manager of the Texas Nursery Co., Sherman, Tex.

THE Frank Kadlec Nursery Co. of Evanston, Ill., has been incorporated with capital stock \$50,000 to do a general nursery business. "F. Kadlec and others" are given as the incorporators.

LOGAN, UTAH.—The Western Nursery Co. of Logan has filed articles of incorporation with the secretary of state. The company has a capital stock of \$10,000, with shares at the par value of \$1 each. The officers are: F. E. Clark, president; H. C. Clark, vice-president; G. D. Cardon, secretary; Katherine S. Clark, treasurer.

### American Ass'n of Park Superintendents.

The annual meeting of the American Association of Park Superintendents will be held in Harrisburg, Pa., August 9-10 and in Gettysburg August 11. Several changes in the constitution and by-laws will come up for consideration and these are fully described in a leaflet sent out by and to be obtained from F. L. Mulford, secretary-treasurer of the association, Harrisburg, Pa. Besides the business session three sessions will be devoted to the reading of papers, several having been promised from well known authorities and the secretary invites every member present to take part in the interesting discussion these papers will provoke.

There will be a visit arranged to the parks of Harrisburg, in itself a pleasing and inspiring function, while the social features are many and varied. The trip to Gettysburg will be well worth while, this beautiful and historic spot being of the greatest interest. In Harrisburg the Commonwealth hotel will be headquarters, the rates being \$3.50 per day up for room and bath. In Gettysburg headquarters will be at the Eagle where the rate is \$2 per day. Members from New York and New England points should leave New York not later than the midnight train on August 8, taking the Harrisburg sleeper over the Pennsylvania from Twenty-third or Cortland street ferries. From points west the Atlantic express over the same is the best, as it crosses the Alleghany mountains over the famous Horse Shoe curve by daylight, reaching Harrisburg the afternoon of August 8. The 11 a. m. train from Chicago will arrive at Harrisburg at 7 a. m., August 9, but the mountains will be crossed during the night. Other trains either reach Harrisburg in the middle of the night or not until after the convention opens. The only chance for special rates are with the regular six months excursion ticket via the Philadelphia and Reading railroad. This ticket should be specified as it is the only one that allows stopovers at Harrisburg. The "short line" does not pass through the city. Rooms and sleeper accommodation should be engaged early and Mr. Mulford will attend to the former if members wish and will advise him at once.

# A BLUE ROSE

## The Greatest Rose Novelty of the Century

*It flowered with us this season and was greatly admired.*

The New Rambler (Violet Blue), hailed by the German rose growers as the forerunner of a genuinely cornflower blue rose, is a seedling of Crimson Rambler, very vigorous and hardy, and free blooming.

### IMPORTANT BUSINESS CHANGE.

Announcement has been made of the transfer of all the stock of the Dingee & Conard Co. to P. J. Lynch, secretary-treasurer, and M. Henry Lynch, vice-

P. J. Lynch.

president of the Dingee & Conard Co. The brothers Lynch thus become the sole owners of this immense establishment, having purchased outright all the interests in the company owned by Charles Dingee, the only surviving founder of the original firm, whose inception dates back nearly 60 years.

The brothers Lynch have for a considerable time practically run the whole of the business and they have succeeded in not only maintaining but increasing the world-wide reputation of the firm. Recent extensions of the business have been the addition of plants at Charlottesville, N. C., and New Castle, Ind., both of which are now running smoothly. This is a great tribute to their business ability and

knowledge of the work involved in its conduct.

P. Joseph Lynch recently returned from New Castle, where he has been conducting that branch of the business, to attend the annual meeting of the Dingee & Conard Co., at which a most prosperous season was reported and all the old officers re-elected, as follows: Alfred P. Reed, president; Henry Lynch, vice-president, and P. J. Lynch, secretary-treasurer. Mr. Lynch speaks very highly of the hustling middle west country where much of his time has been and will be spent in developing the new business, and he will return almost at once.

Mixing Concrete.  
On account of its cheapness, uniformity, and quick development of strength, the only cement practically used at present is the kind called "Portland." There are almost as many brands of Portland cement as there are of wheat flour. Choose some brand guaranteed by the local dealer to meet the standard specifications of the American society for testing materials, which standards are approved by the national government. Cement takes water so easily that care must be exercised in storing it. Upon the regular floor of a good building place timbers close together, as a support for a false floor, upon which the cement should be piled.

KEEP THE CEMENT DRY.  
Cement is heavy; do not overload the floor of the building by piling it too high, and do not store it against the side walls. Keep it covered with canvas or roofing paper. Cement once wet sets up and is unfit for use. However, lumps due to pressure in the store house must not be mistaken for set-up cement. Such lumps are easily crumbled and may then be used.

Concrete is a mixture of Portland cement and particles of stone. The stone should vary in size from pieces one inch in diameter to sand grains. By so grading the stone, the smaller particles fit in the spaces between the larger pieces, thereby producing the most compact and the strongest mixture. The best stone for crushed rock is one which is clean, hard, and breaks with sharp angles. Trap, granite, and hard limestone are among the best; the use of shale, slate, and soft lime-stones and sandstones should be avoided. The crushed rock should be screened on a ¼-inch screen to remove the fine particles. These small particles should be considered as sand; and, if insufficient in quantity to make the proper proportion of the concrete, as is described later, enough sand should be added to them to produce the required amount.

Gravel well graded in sizes is at least equally as good for concrete as crushed stone. Bank-run gravel, just as dug from the pit, seldom runs even and rarely has the right proportion of sand and pebbles for making the best concrete. The mixture most suitable has one part sand to two parts gravel, measured by volume, in which all sizes passing through a 1-inch-mesh screen and retained on a ¼-inch screen are considered gravel. As there is usually too much sand for the gravel, it is both advisable and profitable to screen the material and to remix them in the proper proportions. Gravel should have no rotten stone and should be clean, so that the cement may adhere to it tightly.

—Cash, No C. O. D.—

JOS. H. CUNNINGHAM, Delaware, O.

With dirty sand, no amount of cement will make strong concrete. Generally sand is clean, but if not, it can easily be washed by playing a hose or flushing water upon thin layers of sand placed on a tight-jointed inclined wooden board. In sizes of grain it should vary uniformly from fine to coarse. All particles passing a ¼-inch screen may be considered sand. Any good-tasting drinking-water is suitable for concrete.

Measurement by counting shovelfuls is poor and uncertain practice. To avoid splitting of bags of cement, make as the unit of measurement one cubic foot, the amount of loose cement contained in one cement bag. Such measurements are made a very easy matter by gauging the wheelbarrows. For this purpose use a bottomless box holding one cubic foot. A shallow bottomless frame is also a convenient means of measuring. Such a frame, when set on the mixing board and filled, should contain the full amount of sand or one-half the quantity of gravel, or crushed rock, required for one batch of concrete.

All the materials (slightly more than the computed quantities) should be on hand before beginning the work. They can often be hauled at odd times. The sand and gravel or stone should be piled so as to cause the least amount of wheeling; to make the mixing most convenient to the water supply; to allow room for the future location of the mixing board. If the gravel does not need screening, place a bottomless frame on the mixing board and fill it level full with gravel. Lift the frame, spread the gravel slightly with the garden rake, and upon it distribute evenly two bags (the full amount) of cement. Set the frame upon the leveled surface of cement and gravel and again fill it in the same way.

Remove the frame and spread the entire mass by dragging it back and forth with the rake. Two men, opposite each other, then turn the batch with square pointed shovels. Again

## Miscellaneous Plants

We have the grandest lot of Boston and Whitmani Ferns in 2½ to 10-in. pots. Extra fine Plumosis, 2½, 3, 4 and 5-in.; Sprengerii 2½, 3 and 4-in.; Cyclamen, 2½ and 3-in.; Celestial Peppers, 2½-in.; Jerusalem Cherries, 2½ and 3-in. Chrysanthemums, Col. Appleton, Cash. J. K. Shaw, Ivory and others. Write us for prices on anything you may need.

GEO. A. KUHL, Wholesale Grower, Pekin, Ill.

## Brides and Maids

2½-in. \$2.50, 100: \$25.00, 1000.  
Numerous other good sorts in prime stock

THE LEEDLE FLORAL COMPANY.  
SPRINGFIELD-OHIO.

use the rake. Keep turning until the cement no longer shows in streaks, until the mixture has a uniform color. Throw up the ragged edges and, with sprinkling can or hose with spray nozzle, apply water in quantity. Turn again and add so much more water as may be required. If dry streaks are still evident, continue the turning until they disappear. With wheelbarrows quickly remove the concrete and immediately use it in the work.

If crushed rock or screened gravel is to be used, fill the bottomless frame with sand and distribute upon it two bags of cement. Drag the materials back and forth with the garden rake, then turn, as described above, until the mass has a uniform color. Spread the mixture so that two framefuls of crushed rock or screened gravel may be placed upon it. Wet the mass and turn as for bank-run gravel until each stone is coated with cement mortar. Remove as for the gravel concrete. For the proportion of 1 : 2½ : 5 or 1 : 5 the method of mixing is the same. Since crushed stone is more or less porous, in dry hot weather it is advisable to keep the stone pile wet or at least to water the stone well as it stands on wheelbarrows ready for the mixing board.

CONTENTS

Carnation Plants

Clean, healthy, field-grown plants.  
This is the place you got those nice plants last season. Our stock this season is equal to last. Following is the list of varieties.

|                     |                                  |

Carnations

F. DORNER & SONS CO.  
La Fayette, Ind.

Cincinnati.

SUMMER QUIET.

Business last week was extremely quiet and the cut flower market reached its lowest level. Good roses and carnations were to be had, but not in great quantities. The Longiflorum lilies were plentiful, but unfortunately the market failed to appreciate its opportunity and quite a number were consigned to the barrel. Some exceptionally fine Auratum were seen at the Ohio Cut Flower Co., but the demand failed to take up one-half that came in. On Monday morning the market opened with a healthy demand, which, no doubt, was occasioned by the death of one of our well-known bankers, and buyers were eager to procure the best stock available. Gladioli are arriving in increased numbers and another week will see asters added to the list, as several growers state they will begin shipping about July 25. Green goods of all kinds are to be had in quantity.

NOTES.

As the S. A. F. convention draws near we hear of this or that party who contemplates going to Rochester next month. So far the party from this city will be C. E. Critchell, Ray Murphy, J. A. Peterson, Louis H. and Edith F. Kyrk, A. C. Heckman, Jr., Albert Sunderbruch and Dan Carmichael. Undoubtedly when the time comes a few more will be added to the list.

A letter from P. O. Coblenz, the New Madison gladiolus king, states that he is the proud grandpa of twin boys and that the daughter-in-law and two sons are doing fine. Congratulations, grandpa, and we hope the boys turn out to be fine specimens of manhood.

Mrs. P. J. Olinger leaves for Chicago this week to spend the summer, and Miss Stella Kyrk is enjoying her vacation with friends at Washington, Ind.

Alfred Murphy has a glazing party this week; all visitors to his establishment are put to work glazing that new 250-foot house.

J. A. Peterson will exhibit his new Begonia Glory of Cincinnati at the S. A. F. convention, and also a fine line of new dracenas.

R. D. Ruttle, the Covington florist, attended the Elks' convention in Detroit last week.

E. G. Gillette and family are at Traverse City, Mich.

WE TAKE THE LEAD

In what? What a foolish question! Don't you know? Didn't you hear of GODFREY ASCHMANN, the great Araucaria Importer, Grower and Shipper? These so well favored, everlasting green decorative plants, the Araucaria Excelsa, Robusta Compacta and Excelsa Glauca, are in favor more than ever this year.

This is our 25th anniversary since we began importing Araucarias. Watch! See us grow! Beginning 25 years ago with 100, our this year's (1910) importation is 10,000, and more are coming this fall after I have made my selection of the choicest of the choice on my trip to Belgium; the growing district of the world in Araucarias and Azaleas. The trade is well informed that for many years past I go personally to Belgium to protect and select for my customers the best of Araucarias, Azaleas, Palms, etc., that cash can buy there. Empty houses won't pay. Now is the time to fill your empty houses with something to grow into money while you are asleep.

Remember, it is the wideawake man that is not afraid to invest a dollar that makes the money. Please look at our special low prices for superior stock.

Araucaria Excelsa, raised from top cuttings, no seedlings. Plants, 5-5½-6-7 in. pots, 12-15 18-20-25-30 in. high, 3-4 5-6 tiers 2 3-4-5 years old, 35c. 50c 60c, 75c \$1.00, \$1.25 to \$1.50 each.

Robusta Compacta, Excelsa Glauca, 6-in. pots, \$1.00 to \$1.25 each.

Kentia Forsteriana, in fine shape, 6-in. pots, 30 35-40 45 in. high 4-5-6 years old, 75c. \$1.00, \$1.75 \$1.50 \$2.00 to \$2.50 each.

Kentia Belmoreana, 25 30-35-4 in. high 5-5½-6-7 in. pots, 5-6-7 years old, 50c, 75c, \$1.00, \$1.25, \$1.50 to \$2.00 each.

Kentia Belmoreana, 2½ to 3 in., 10c each.

Standard Bay Trees, 1-foot tubs, 7 ft. high from bottom up, 2 x 2 crown, \$8 00 per pair.

Cyclamen Grandiflora, best strain, 4 in., 15c.

Nephrolepis (Ferns), Boston Scottii, Whitmani, Scholzei 4 in., 25c; 5, 5½ and 6-in., 35c, 40c and 50c.

Ferns for Dishes, big assortment, 2½-in. pots, at \$3.00 per 100.

Begonia Gloire de Lorraine, deep pink, 4-in., 25c.

Begonia Lonsdale, pale pink, 4-in., only 25c.

Sago Palms, ready July 15, 6-7-8 in. pots, from 5 to 20 leaves 10c per leaf.

Cocos Weddelliana, 3 in. pots, 18c to 20c.

Cannas, Richard Wallace (best of the red), J. D. Eisele (also one of the new best reds), large 4-in., \$7.00 per 100.

Summer Chrysanthemums or Paris Daisies, 2½-in. pots, 3c.

English Ivy, 3 in., 5c.

Primula Obconica, best strain, 4 in., 10c; 5-in., in bloom, 15c.

Cosmos, separate colors, 2½-in., \$3.00 per 100.

We have an unsurpassed strain of Solanum Multiflorum (Jerusalem Cherries). Can offer only a limited quantity. 2½-in. pots, \$5.00 per 1000.

Cash with order, please.

**10 per cent special CASH DISCOUNT.** On orders over \$2 for Flower Seeds if cash is enclosed. **10 per cent.** The discount does not apply to Asparagus Seed. Cash discount on this is 2 per cent.

## VAUGHAN'S "GIANT PANSY MIXTURE."

Embraces besides all the separate shades and colors, five special strains not listed elsewhere, and which can only be had in this and our International mixture. This mixture includes the richest reds, coppers and bronzes, together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain. Trade pkt., 25c; ¼ oz., 60c; oz., \$4.00; ¼ lb., \$14.00.

Our list of "Seeds for Summer Sowing" now ready; if you have not received a copy please write for same.

## VAUGHAN'S "ELITE PANSIES."

This is not a complete mixture like our International; it does not contain any pure white, yellow or any self colors. It is comprised of the cream of four Pansy specialists' choicest and most expensive mixtures. Trade pkt., 50c; ¼ oz., \$1.00.

## VAUGHAN'S PREMIUM PANSY MIXTURE.

Embraces all the varieties of the Fancy German Sorts. We have sold this mixture for the past seventeen years, and it has given general satisfaction. Per pkt., 25c; ¼ oz., 75c; ½ oz., \$2.50; oz., \$5.00.

## IMPROVED GERMAN MIXTURE.

This is a mixture of three strains from different German growers, and is made up mostly of separate colors, with a sufficiently large percentage of white and yellow. Per large pkt., 10c; ¼ oz., 20c; ½ oz., 30c; oz., \$1.00.

## VAUGHAN'S INTERNATIONAL PANSIES.

Vaughan's International Pansy Mixture was first prepared and offered by us in 1889. We import from all the best European sources, and personally inspected the fields of French and German specialists of their finest strains. Each year has added to the quality of its flowers, the variety of its colors. We buy every year novelties of known merit to improve the mixture. This is the reason it is always complete, always the latest and always the best mixture AS WE BELIEVE. We add to all the Pansy Mixtures, which we now buy more than fifty per cent of choicest named kinds obtainable, each in rightful proportion. We thus know what it will produce. This is one of the SPECIALTIES which has established and held the reputation of Vaughan's Flower Seeds and this is one which we maintain most carefully, not alone as to quality, but in vitality and germination. You are beginning right in Pansy growing when you start with Vaughan's International Mixture. Trade pkt., 50c; ¼ oz., \$1.50; ½ oz., \$5.00; oz., \$10.00.

## VAUGHAN'S CUT FLOWER MIXTURE.

This mixture is put up by ourselves and contains mostly light colored sorts. We have sold this mixture for several seasons to some of our Chicago cut flower growers, who have realized big returns from the sale of the flowers. Pansies are as easily grown as violets, require less care and bring better returns. Trade pkt., 50c; ¼ oz., \$1.00; ½ oz., \$2.00; oz., \$8.00.

**FRANK OECHSLIN,**

4911 Quincy St., CHICAGO.

LOWELL, MASS.—Geo. Foster of Wamesit is enlarging his greenhouses. J. K. Chandler of Tewksbury is building a new greenhouse.

FORT WAYNE, IND.—From now on the Misses Mildred and Ruth Flick will be associated in business with the Flick Floral Co., in the well-known store conducted by Miss C. B. Flick for a number of years in West Berry street. Both young ladies are nieces of Miss Flick, and Miss Mildred Flick has been an assistant in the store for six years, displaying the taste for decorations which is so well known a feature of Miss C. B. Flick's work. It was the wish of the father of these two young girls, the late George Flick, that they, as soon as possible, take upon them some of the work of the business in which he had been associated.

## Smilax, Sprengeri,

Smilax at \$10.00 per 1000, ready August 1.  
Sprengeri at \$15.00 per 1000.

Let me send you a sample.

# Dreer's Special Offer of Fine Ferns

**Nephrolepis Scholzeli.**

**Mixed Ferns for Dishes.**

We have at all time a good supply of these in good assortment  
2½-in. pots, \$3.50 per 100; \$30.00 per 1000.

For a complete list of seasonable stock offered by us at this time see our current wholesale list. If you have not received a copy it will be mailed to you on application.

**HENRY A. DREER, Inc., 714 Chestnut Street, Philadelphia, Pa.**

**Nephrolepis Scholzeli (Crested Scott Fern.)**

A sport from Scottii possessing all the merits of that most popular variety but with the pinnae sub-divided giving it a neat crested appearance. 2½-in. pots, \$1.25 per doz.; \$8.00 per 100; \$75.00 per 1000.

**Nephrolepis Whitmanii.**

(The Improved Ostrich Plume Fern)

3-inch pots \$1.25 per dozen; \$8.00 per 100;

**Adiantum Croweanum.**

We are the sole distributors of Mr. Crowe's stock of this valuable fern.

This is not only the best and most profitable Maiden hair to grow for cutting but it is also the best variety to recommend to the retail buyers for house culture, it standing the dry atmosphere of the room better than any variety we have yet tried.

Strong 3-in. pots \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000.

**Asplenium Nidus Avls (The Bird Nest Fern.)**

A nice thrifty lot in 3-in. pots, 30c each; \$3.00 per doz. 4-in. pots, 40c each; \$4.00 per doz.; 6-in. \$1.00 each.

**Nephrolepis Glatrasii.**

This variety, introduced last fall in a very limited way, has proven to be a gem—especially where a perfect specimen is required in a small size. It will develop beautifully in a three, four or five inch pot, making an ideal plant for many purposes where the other varieties of Nephrolepis are too coarse, and it is also fine for fern dish work when grown in 2½-in. pots. \$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.

**Ferns in Flats.**

These flats contain about 200 plants each, only one variety being in a flat. We cannot supply less than a full flat of any one sort. Price \$2.00 per flat. Ready now.

Adiantum cucullatum.  
Aspidium Tsussimense.  
Aspidium Tsussimense cristata,  
Cyrtomium falcatum,  
Cyrtomium Fortunei,  
Lastrea Chrysoloba,  
Lastrea Aristata variegata.

Pteris adiantoides.  
Pteris cretica magnifica.  
Pteris cretica Wimsetti multiceps.  
Pteris Wilsoni  
Pteris Ouwardi  
Lomaria ciliata

**Pittsburg.**

**TRADE BETTER.**

Business is fairly good this week, sales picking up a little. Good carnations and roses are very scarce and consequently command pretty good prices. Beauties are moving out nicely. Other stock is going slow at low prices. Some very nice asters are seen in this market. Gladioli are coming in more plentifully.

**NOTES.**

J. Gerwig of J. B. Murdoch Co., was struck with the matrimonial bug recently. Miss Britweiser is the young lady's name.

W. D. Faulk of Homestead has been showing some very artistic windows arranged with water lilies.

John Orth, McKeesport, has the sympathy of the trade in the death of his father, John Orth, Sr.

T. F. Beckert, Neville Isle, is consigning some nice early asters to the McCallum Co.

Allen Langhans of the Pittsburg Cut Flower Co. is planning a trip to Sugar Island.

Geo. McCallum of McCallum Co. is trying his luck at fishing in Conneaut lake.

The South View Floral Co., Carrick, is cutting some good Melody carnations.

John Harris and Peter Harris are spending their vacation in Michigan.

O. F. Beet, who has been with Chas. Eisner, has left that place.

Carl Puhlman, Carnegie, is going to put up some new houses.

H. C. Beuchler of South View Floral Co. is reported very ill.

P. Mair, Woodville, has been cutting quantities of fine lilies. J.

**Cleveland.**

The dry weather is not causing any serious damage in these parts. Sweet peas are getting very short in the stem, but it does not pay to water them as the price they bring does not warrant the expenditure. Outdoor gladioli are coming in; asters are promised for this week. Candidum lilies from storage are selling well. Water lilies are still good sellers. Roses for funeral work are having a fairly good call, nothing much in special stock being on the market. Carnations are going for little or nothing. Asparagus plumosus and A. Sprengeri are overplentiful just now, much of this stock going to waste.

**NOTES**

Chris B. Wilhelmy has begun the erection of a new range of houses and new store at 3610 W. Twenty-fifth street that will be modern and up-to-date.

Tim Smith, of the Smith & Feters Co., is spending a few days at Niagara Falls.

H. Knoble attended the Elks' convention at Detroit the past week.

C. B.

BALTIMORE, MD.—At the bimonthly meeting of the Gardeners' and Florists' Club, held July 11, in the Florists' Exchange, the summer meeting and outing of the Maryland State

**Poehlmann Bros. Co., Morton Grove, Ill.**

Horticultural Society, which will be held at Berlin and Ocean City, July 28 to 29, was the main topic of discussion. Many of the members of the Gardeners' and Florists' Club also belong to the society, and it is expected that many of its members will attend the meeting. Governor Crothers and the officials of the La Plata meeting have been extended an invitation to attend and it is expected that they will be present. Another matter talked over was the convention of the Society of American Florists, which convenes in Rochester from August 16 to 19. Many of the members have made known their intention of attending the convention and it is expected that Maryland will be represented by a large delegation. A number of routine matters were disposed of. The following committee was appointed to investigate the advisability of holding an outing at one of the resorts here before the close of the summer: I. H. Moss, Frederick Bauer and J. Boone. The club will meet again July 25.

astronomy. The believers attempt to explain the great mystery of the deity scientifically. The system is believed to be the beginning of the supreme theocracy expected by all Christians to be made manifest in what is termed the "second advent."

# "The Palms You Shipped Us Arrived in Good Condition and They Are Excellent Plants"

These are the words of one of our customers in acknowledging recently the receipt of a shipment of Palms. To emphasize their approval, they enclosed with the above letter an order more than twice as large as the first one.

It was welcome news to us, and it has a big and important meaning for you too.

Heacock's Palms please our trade because they are so unusually good; they will please your customers for exactly the same reason. When they come to you for palms, you can give them quality and the full worth of their money by supplying them with Heacock's Palms.

A trial order will convince you, and will show how you, like this customer and scores of others, can make a handsome profit from a Palm Department. Look over the following list, then put an order up to us—give us a chance to prove the quality of our stock.

### HIGH CLASS PALMS

and Novelties in Decorative Plants.

Market and 49th Sts., Philadelphia, Pa

HAZELTON, PA.—Geo. B. Markle will shortly let a contract for the erection of a \$4,000 greenhouse on his farm in Sugarloaf. He contemplates engaging in the culture of flowers on a large scale. A cement root cellar 12x90 feet will also be built.

GLOVERSVILLE, N. Y.—The greenhouse property belonging to Geo. Main and located on North and North School streets, has been sold to Henry McLean, who will divide it into lots for the erection of houses. Mr. Main intends to close out his stock of plants and shrubs and go to Washington, D. C.

## King Iron Frame Greenhouses

"Ask the Man Who Has One."

Robert Scott & Son, who have a range of King Iron Frame Houses, write as follows:

SHARON HILL, PA., Feb. 7, 1910.

Gentlemen:—

I am very much pleased with the five houses of the King Iron Frame Construction that we put up last fall. They are strong and light and we think so well of them that when we build again that is the construction we shall use. We are planting this section in concrete solid beds and if you are near Philadelphia in May and you can call on us, we think you will tell us that it is a good advertisement for your Iron Frame Construction in this part of the country.

Yours very truly,

ROBERT SCOTT & SON, (Signed)  
Alexander B. Scott.

Messrs. Scott & Son have recently placed with us an order for another large addition to their plant.

Send for Bulletin No. 35 which describes

**The King Iron Frame Construction.**

**KING CONSTRUCTION CO., North Tonawanda, N. Y.**

## Have You Ever—

Talked with a brother florist who uses Morehead Return Steam Traps? If not, do so at first opportunity and be convinced that you must install one at once.

30 Days Free Trial.

There are more MOREHEAD TRAPS installed in greenhouses than of all other makes of steam traps combined. The Morehead is distinctly a florist's trap. Every feature of its construction has been treated with a view of meeting the special needs of the florist.

Write today and ask for "Trap Book."

**MOREHEAD MFG. CO., Department "N" Detroit, Mich.**

## "GREENHOUSE MATERIAL"

## THE ALLIED TRADES

THE Gardner Artificial Lumber Co. has been organized for the purpose of making artificial lumber out of straw.

THE King Construction Co., North Tonawanda, N. Y., has received several good contracts recently: One for J. D. Larkin, Buffalo, N. Y., calls for two houses 21x87 feet to be built on his estate near Delaware park. The Buffalo Cement Co. is making an addition 30x120 feet to its present range at Main and Amherst streets, Buffalo, of the King Co.'s iron frame construction. The park commissioner of Buffalo has given the above company the contract for a greenhouse 20x107 feet to be attached to the present range on Elmwood avenue, at Delaware park.

## Greenhouse Building.

Baltimore, Md.—F. C. Bauer, two new greenhouses; A. Fiedler, carnation house 20x100 feet; James Hamilton, Mt. Washington, one greenhouse 24x100 feet.

Salt Lake City, Utah.—D. E. Law, a modern range of glass; the Miller Floral Co. addition to greenhouse plant.

New Rochelle, N. Y.—Hitchcock & Co., new conservatory; Louis Epple, several greenhouses.

Lincoln, Ill.—Gullett & Sons rebuilding a portion of their greenhouse plant.

Cincinnati, O.—Henry Schwarz rebuilding greenhouses and one new one.

## Attention!! Glass Buyers!!

## GREENHOUSE GLASS.

## Pipe Hooks for all Uses

Pipe Hooks for Wood Posts.

**I**t matters not whether you want them to attach to wooden posts to clamp around columns or to fit flat iron posts, we have all kinds in all sizes for both steam and hot water.

Also swing hangers for under bench piping. Swing hangers for suspending mains from the floor eye beams of the work room.

Anything and everything for heating systems of all kinds. Sixty years of heating engineering have given us our know how.

Send for our heating circular.

**Hitchings & Company**  
Elizabeth, N. J.

Pipe Hooks for Columns.

### The Steam Coal Situation.

Chicago.—The prolonged tieup in the Illinois soft coal mines has tended to force the price of contract steam coal to a point where figures quoted by the local dealers don't appeal to the florists and the greenhouse and nursery trade. The dealers promulgate information that there is no likelihood of prices going below the present figures, in view of the advanced freight rates and increased cost of mining the product per ton.

"This," stated J. R. MacFarland, assistant general sales agent of the O'Gara Coal Co. Marquette building, Chicago, "places us in a position where we are compelled to sit idly and see the contracts for steam coal snapped up by coal operators who obtain their supplies east of the Illinois-Indiana state line. Business, which has been on our books for several years, will, during the ensuing twelve months, at least, get away from us. However, there is some prospect that in the near future a settlement will be effected in the Illinois field; how soon? that is difficult for me to answer now."

## GOLSEN-DOAN COAL CO.

### Florists' Coal a Specialty

We make this special offer to florists

|                              |                                       |                |

| F. O. B. Chicago.            | Good things do not go begging long.   |                |

Old Colony Building, - - - CHICAGO.

Another feature of the steam coal situation right now is that while plenty of cars are available to move the business during the coming six weeks, when the crops commence to move in during the fall the difficulty of previous seasons in the shape of shortage of carriers will have to be considered.

In this connection the matter of anthracite coal looms up. While up to date something like 15 per cent of the total coal used by florists, nursery and greenhouse men for steam producing

purposes is anthracite, the percentage of hard coal will be increased from time to time in view of the continued legislation to curtail the smoke nuisance. This is especially true in the thickly settled and residential sections of Chicago, where florists and allied interests have steam producing plants. Meanwhile some large contracts for steam coal will come up for consideration during the coming six to ten weeks.

DEDHAM, MASS.—Edward Bingham and son are in Europe.

## The Moninger - Furman

Saves coal.  
Lasts a lifetime.  
No flues to clean and plug.  
Send for catalog.

Every operating part right on the front—shaker handle, smoke box damper handle, cleanout doors—everything. Send for Catalog.

**LORD AND BURNHAM CO.**  
IRVINGTON, N. Y.  
New York. Boston.  
Philadelphia Chicago.

NEW CASTLE, IND.—Levi A. Jennings has purchased the greenhouses near the Union depot.

BALTIMORE, MD.—The greenhouse at the northwest corner of Dolphin and Bolton streets, which has been an old landmark of that neighborhood for many years, has been razed. Chas. A. Fox, one of the oldest florists in the city, established the business there in 1860. Now the demands made of him call for larger and more modern quarters, which he has begun to erect. The new buildings will consist of a modern three-story dwelling, office and greenhouses. They will be built of Roman brick, trimmed with brownstone. The improvements will cost between \$15,000 and \$20,000 and are expected to be completed about the latter part of November. The lot is 40x100 feet.

## The Superior Standard

### RETURN FLUE FIRE BOX BOILER

contains more heating surface, and less water space than any other steel boiler.  
 $\frac{3}{4}$  of the heating surface is in the tubes.

Ask the man that knows the one using different style boilers—names are yours for the asking.

After using our boiler one season, you will say like all others: Nothing but "Superior" for me.

This boiler has given better satisfaction than any other boiler on the market  
MADE IN NINE (9) SIZES FOR HOT WATER.

Send for catalogue and list of growers that are using this boiler.

**THE SUPERIOR MACHINE & BOILER WORKS, 840-850 Superior St., Chicago.**

### Sulphate of Ammonia in Agriculture.

Consul-General Richard Guenther, of Frankfort, reports that the consumption of sulphate of ammonia by the German farmers increased from 284,000 metric tons in 1908 to 330,000 in 1909. The consumption of Chile saltpeter was about 450,000 metric tons, so that, as far as the percentage of nitrogen is concerned, ammonia is already a trifle ahead of saltpeter. The Journal of the Association of German Engineers states that the development of the last 10 years points to the fact that, in the near future, ammonia will chiefly be used as an artificial fertilizer. Statistics show that Germany consumes its entire yearly production of 322,700 tons at home, England produces 348,000 tons, while the United

## The "Meyer Green Silkline"

is the only Green Thread that should be used by florists and growers. It is guaranteed full weight and full measure.

Also Violet Thread for tying up Violets. Price of both, \$1.25 per lb.

**JOHN G. ESLER, Secretary**  
SADDLE RIVER, N. J.

Providence.

After the extremely hot and dry spell of the past three weeks, relief came last Wednesday in the form of a very heavy rain accompanied by thunder and lightning which lasted an hour and did a lot of good for all kinds of crops outdoors. It was a very hot week with a disagreeable amount of humidity in the atmosphere up to the time of the heavy shower, which made conditions more agreeable. Flowers show the effect of the weather, coming in softer and poorer every day, particularly roses and carnations, but there are still enough of a very fair quality to meet all demands. Outdoor flowers are plentiful. There is nothing doing except funeral orders, of which there was a fair number the past week. Carnations will be thrown out soon to make room for the field stock, which looks very much refreshed from the heavy showers. Gladioli are plentiful and bring very fair prices. The variety America seems to be the favorite. Sweet peas are coming in very plentiful and the Spencer varieties are the favorites. Water lilies are seen on almost every prominent business corner and are freely offered at low prices. Some of the country dealers in these flowers have undertaken to color them artificially pink and blue, and they look as if it was done with red ink or bluing. They made a very bad attempt to imitate the natural flower, as they are hideous looking specimens. Asters are very plentiful yet. Gypsophila is of good quality and is bought up quickly. Adiantum and asparagus are plentiful enough to supply all demands. Canterbury bells, coreopsis, larkspur, candytuft, mignonette and gaillardias all help to make an effective show at the stores.

#### NOTES.

City Forester Alex. Johnson reports all the money appropriated by the city government for the fighting of gypsy, brown tail and other tree pests is used up, and it is just at the present time a war on these pests should be going on, as they are making their appearance in great swarms all over the trees of this city and state. Mr. Johnson says he is doing all in his power to get another appropriation.

John Burke, who recently took possession of the place of William Hay, the rose grower on Dyer avenue, is cutting some very fine summer roses and says business is as good as it has been at this season of the year in his experience on this place, which is about from the time it was built—15 years ago.

John M. Greene, formerly with Stephen H. Briggs as gardener, has purchased land on Waldo street, form-

## Garman's Antipest

INSECTICIDE AND FUNGICIDE

Carnations, Dahlias, Golden Glow, Peonies  
Chrysanthemums and Tomatoes.

63-71 Metropolitan Ave. **BROOKLYN, N. Y.**

erly owned by the late W. A. Monroe. There is a small greenhouse on this place which Mr. Greene intends to enlarge and modernize at once.

Carl Jurgens of Newport has abandoned his place on Mill street and is giving his entire attention to his new range at Middletown. He will set apart several of his Middletown houses, to the growing of lily of the valley.

John F. Wood has started in the fruit business for the summer months, but still continues to sell flowers at the same location. Mr. Wood finds cut flowers will not keep well in a refrigerator with fruit.

Robert Vanmeader of this city has purchased a farm at Swansea, Mass., on which there are several small greenhouses which he contemplates adding to in the near future.

Albert Bavier, who has been in charge of the flower department of L. Dimond & Sons, Inc., has severed his connections with this firm and is now at his home in Meriden, Conn.

Jas. B. Canning and wife have postponed their European trip on which they were to sail on August 1. Illness in Mrs. Canning's family caused the postponement.

A range of greenhouses is being erected on the estate of Arthur Curtis Brown at Newport. This work is being done by Hitchings & Co., New York.

William Appleton is not convalescing as fast as his many friends would like to see him. The extreme hot weather has not improved his condition any.

Hall & Lyon Co., a department store here, had a sale of sweet peas on Saturday, 25 flowers for 10 cents, and sold several hundred bunches.

The estate of Wm. Grosvenor, Newport, is erecting a range of greenhouses. Hitchings & Co of New York are the contractors.

Rain fell in generous quantities all Saturday night and all outdoor plants and crops are looking thoroughly refreshed.

Max Villers, with Johnston Bros., on Dorrance street, is spending his vacation at Narragansett Pier.
